

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

MACMILLAN'S W.&A.K. JOHNSTON'S PUBLICATIONS.

THE FOLLOWING WILL BE READY THIS MONTH.

EDINA JUNIOR HISTORIES. Books V and VI. Price 1/4 net each.

The Scottish Educational Journal :—"Miss Westlake and Mr. Franklin have performed a distinct service in issuing this 'age' series of histories. The series seems to us to be on the most approved lines, and we heartily recommend it to our readers."

ATLAS GEOGRAPHIES. — INTRODUCTION TO COMMERCIAL GEOGRAPHY. Price 2/8 net.

Including a general survey of the world's products and the natural conditions determining their distribution. A useful course in Commercial Geography for the Upper Forms of Elementary Schools, for Evening Continuation Schools, and for preparation for School Examinations such as the Oxford and Cambridge Locals and "Intermediate" Welsh Board. It includes 25 maps and figures to illustrate the text.

ATLAS SENIOR GEOGRAPHIES—EUROPE.

Teachers and Candidates for Matriculation, University Locals, Civil Service, and other Examinations should secure copies of this book. In addition to Orographical Routes, Climatic, Vegetation, Economic and Political Maps of the whole continent, there are Orographical Transparent Routes and Economic and Political Maps of each Natural Region. Subject matter is clear and up to date. Numerous practical exercises at the end of each section.

O.R.E. ATLAS. Part I. BRITISH ISLES.

The aim of the publishers in producing this series is to provide at the lowest possible price clear orographical, economic, and political maps of each natural region in addition to orographical, climatic, economic, and political maps of the whole area. Each map deals with a particular phase of the subject, and is not overloaded with names in small print. For the first time Atlases dealing with the British Isles and each continent separately are being introduced, thus avoiding the necessity of buying an expensive world atlas when only maps of a certain area are required.

REPRINTS.

HISTORY'S BACKGROUND. Book I. Price 2/6 net.

WORLD AND ITS PEOPLES. 10d. net.

NOW READY.

La Guerre, Vol. II. A sequel to La Guerre, A.D. 1914. By TAYLOR DYSON, M.A. 1s. 3d.

ATLAS AND NOTES ON EUROPEAN HISTORY.

From the time of DIOCLETIAN to the outbreak of the GREAT WAR, 1914.

By HARTLEY FUDGE, M.A. 1s. 8d.

"The book consists of 36 Coloured Maps, not too full of names, and 104 pages of Notes, so called, which, however, practically form a précis of the history of Europe, from Diocletian to the Congress of Vienna. The author then carries forward history to the outbreak of the present War, by dealing separately, but still chronologically, and ab initio, with the history of Poland, France and Alsace-Lorraine, Prussia and German unity, the Dual Monarchy, Ottoman Empire, the Near East, and the like. The whole forms a small reference book useful for History teaching."

Journal of the A.M.A., Dec., 1918.

"In the body of the book there are more than thirty maps which, for the clearness of their lettering, we have very seldom seen excelled. Taken as a series they enable us to trace without confusion, through the centuries, the various stages in the political development of Europe."

"It is a charming and truly representative collection."—*Guardian*.

English Prose, An Anthology of. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WREKES, M.A. 3s. 6d.
"The choice of writers could not well be bettered."—*Saturday Review*.

English Literature, The Tutorial History of. By A. J. WYATT, M.A. Third Edition continued to the present time. 3s. 6d.
"It is well written, well informed, and accurate."—*The Journal of Education*.

French Course, Preliminary. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and H. E. TRUELOVE, B.A. 2s.
"An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method."—*Athenaeum*.

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 3s. 6d.
"The book becomes a serious rival to those existing."—*Schoolmaster*.

French Course, Senior. By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. 4s. 6d.
"A model of clearness and simplicity."—*The Journal of Education*.

French Course, Direct. By H. J. CHAYTOR, M.A., Head Master of Plymouth College. Illustrated. 2s. With Vocabulary (French-English). 2s. 9d. Vocabulary (separately). 10d. net.
"Mr. Chaytor is a teacher of experience, and his book does him credit."—*School World*.

French Composition, Groundwork of. By Professor ERNEST WEEKLEY, M.A. 2s. 9d.
"The author's works have done much to raise the standard in French scholarship throughout the country."—*Secondary School Journal*.

French Essays, Matriculation. (Free Composition.) By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 2s.
"A serviceable and well-graded book."—*School World*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s. 9d.
"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education*.

French Reader, Senior. With Vocabulary. By R. F. JAMES, B.A. 3s. 6d.
"This is a splendid reader."—*Schoolmaster*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 4s. 6d.
"A very successful compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.

Latin Course, Senior. By A. J. F. COLLINS, M.A., and ALFRED ROBINSON, B.A. 4s. 6d.
"The book is business-like and well arranged."—*Guardian*.

Latin Authors, Selections from. Senior Edition. By A. F. WATT, M.A., and B. J. HAYES, M.A. Third Edition. 3s. 6d.
"It is quite an interesting selection, and well done."—*School World*.

Latin Reader, New Junior. By A. J. TATE, M.A. 2s. 9d.
"Mr. Tate has shown great judgment in the extracts he has chosen."—*Bookseller*.

History and Geography.

Geography, Preliminary. By E. G. HODGKISON, B.A., F.R.G.S., Assistant Master, Crewe County School. 2s.
"An admirable text-book, clear, direct, and well suited to the needs of pupils for whom it is intended."—*Literary World*.

Geography, Junior. By G. C. FRY, M.Sc. 3s. 6d.
"A concise book of geography on modern lines. The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education*.

Geography, Text-Book of. By G. C. FRY, M.Sc. Second Edition. Revised and Enlarged. 5s. 6d.
"The compilation is by no means one of mere geographical facts; the 'why' and the 'wherefore' are everywhere in evidence."—*Schoolmaster*.

Physical Geography, Principles of. Adapted from the Physical Section of the *Text-book of Geography*. By G. C. FRY, M.Sc. 2s.
"In this thoroughly serviceable volume Mr. Fry prepares the way clearly and fully for the study of economic and regional geography."—*Educational News*.

Government of the United Kingdom, its Colonies and Dependencies. By A. E. HOGAN, LL.D., B.A. Third Edition. Revised and Enlarged. 3s. 6d.
"An elementary account of the British Constitution suitable for upper forms. The account of the present-day institutions of the British Empire is good and clear."—*School World*.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 4s. 6d. Also in three parts as follows:—I, to 1603; II, 1485-1714; III, 1660-1910. 2s. each.
"Very careful judgment has been exercised in the selection of the matter, and a proper perspective maintained."—*Educational Times*.

History of England, Preliminary. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With Illustrations. 2s. 9d.
"In addition to an outline of political events it tries to give some idea of social and constitutional development and also to connect history with geography. It is clearly written and well illustrated."—*School World*.

English History, Groundwork of. By M. E. CARTER, Honour School of Modern History, Oxford. 2s. 9d.
"A very readable outline of the salient facts of English History. The material is well arranged and the language is simple."—*Educational News*.

Social History of England, A. By FREDERICK BRADSHAW, D.Sc., M.A. 5s.
"An elementary account, suitable for use in the upper forms in schools, of the social and economic development of England. A clear and concise text-book, exceedingly well expressed and well set out. It is indeed the best book of reference on this difficult topic that we have seen."—*Guardian*.

Rome, History of: The Tutorial, to 37 A.D. By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Fourth Edition. Revised and in Part Rewritten by J. F. STOUT, B.A. 4s. 6d.
"An accurate and capable manual for students."—*Speaker*.

Greece, History of: The Tutorial. By W. J. WOODHOUSE, M.A., Professor of Greek in the University of Sydney. 5s. 6d.
"The outcome of wide reading, high scholarship, and much original thought."—*Westminster Review*.

OCCASIONAL NOTES.

SCHMES for the constitution of a League of Nations to enforce peace continue with bewildering rapidity to be evolved, or to be disinterred from the dusty records of the past. A Dutch author, Dr. Meulen, in a work thoughtfully written in German and entitled, "Der Gedanke der internationalen Organisation," supplies particulars of no less than twenty-nine plans propounded prior to the year 1800 A.D. Dr. Evans Darby, in his "International Tribunals," adds ten more as the nineteenth century's contribution to the collection. Mr. L. S. Woolf, in "The Framework of a Lasting Peace," analyses seven schemes which have been drafted since the outbreak of the War in 1914. This gives us a total of forty-six from which to select. To add to these, two new schemes lie before us as we write, viz.: (1) "A League of Nations with Large Powers," by F. N. Keen (Allen & Unwin, 1s. net), and (2) "A Confederation of the Nations—its Powers and Constitution," by Ernest Barker (Clarendon Press, 1s. net). Four dozen plans may seem to provide an embarrassment of riches: but such is not really the case. On one hand, the present necessity for the establishment of some effective means for the prevention of the recurrence of war is so urgent that the fullest formulation of all possible schemes is desirable. On the other hand, an examination of the numerous proposals shows that they can be classified easily into a few main groups within which differences are comparatively slight. The schemes of Messrs. Keen and Barker, just mentioned, represent, as it happens, the two groups which at the moment divide the leading British advocates of the League of Nations policy. Mr. Keen would base

his league upon the all-inclusive foundation of The Hague Tribunals. Mr. Barker would evolve a confederation from the existing Grand Alliance of essentially democratic States. A year ago this distinction was of vital importance. It involved the question: Shall or shall not the undefeated and unrepentant Hohenzollerns and Habsburgs be included? Events, happily, have facilitated the reconciliation of this opposition of view, and, if only Germany and Austria-Hungary can attain to some sort of stable democratic organization, it may be possible for an all-inclusive league or even confederation to be set up.

NEVER have the inducements to leave school at the earliest date the law permits been so strong as during the War, and never have blind-alley employments been so numerous. The young war workers, both youths and maidens, have sacrificed much of their education, have received inordinately high wages, have formed habits incommensurate with their future means, and have viewed life in fatally false perspective. Now that their demobilization is taking place they are cast upon the world with much to learn, with much to unlearn, in pitiable need of protection and guidance. But the various agencies concerned with the welfare of juveniles have not been forgetful of their needs. The Board of Education have issued a circular to Local Education Authorities urging them to form educational centres for displaced juveniles until they again get employment. The Ministry of Labour have promised to pay these young persons out-of-work donations so long as they attend the centres. The London Juvenile Advisory Committee have made definite proposals for the amelioration of their condition, and have appealed for help to the London County Council. The Council needed but little persuading. They sympathetically considered the schemes of the Board and of the Advisory Committee, and have taken the matter vigorously in hand. Classes have already been started at the Woolwich Polytechnic, and it is anticipated that similar classes will soon be at work in other parts of London. These laudable efforts of the Council are receiving the strong support of the head teachers, who have promised to co-operate in the scheme and to keep in touch with their old scholars until the danger period is over.

THE Universities are now faced with the urgent problems of providing for the academic training of the thousands of potential students who have been serving the country during the past four years, and have sacrificed, or at least postponed, the studies which should have prepared them for their future professions. Of these problems the first is that of matriculation or admission to the University, and this is being attacked with vigour on all hands. Certain Universities, we learn, are admitting without examination students who have served in the Forces for a specified period; others are allowing a provisional matriculation on similar grounds, which will be confirmed if the student passes the next higher examination in a specified time; while others (e.g. London) will admit students who have been serving to a special examination which is based on individual qualifications, tested *viva voce*, or by special papers, or both. We also hear that a special Army Education Certificate is to be instituted by the military authorities, and that its acceptance by the Universities as a qualification

for admission is being considered very favourably. Many cherished traditions are swept away in these cases; but the men who will thus enter the Universities will bring to their classrooms and laboratories an earnestness of purpose, gained in the hardest of all schools, the like of which their predecessors rarely knew.

ONE of the many results of the War has been the suspension of the award of Rhodes scholarships, for no scholars have been elected since 1917. It will be difficult, moreover, to hold elections before next autumn—that is to say, for the year 1920. The opportunity provided by this new beginning gives Mr. F. J. Wylie the text for a suggestive article in a recent issue of the *Oxford Magazine*, which discusses whether any changes can be made which might contribute to a fuller attainment of the objects of the Rhodes Foundation. Referring chiefly to the United States, he points out the desirability of appointing in the States committees of selection composed of men genuinely interested in securing scholars for the Trust who will be complete and satisfying representatives, and he adds that former Rhodes scholars might appropriately be included on such committees. He also urges a course which will be widely approved—namely, that it should no longer be necessary for a candidate for a Rhodes Scholarship to pass an examination “equivalent to Responsions” in elementary Greek, Latin, and mathematics. We hope the trustees and the University of Oxford will alike recognize the wisdom of Mr. Wylie’s proposals. He would say to the committees: “Select the best man you can find. He must have character as well as ability; but you have a wide field, and we will not hamper you with examinations. See to it that you send us of your best.”

WE have recently noted in these columns with satisfaction the endowment by Mr. Serena of Italian Chairs at Oxford and Cambridge and that of a Chair of French at Oxford by Sir Basil Zaharoff. And now we have to record that Lord Rothermere has offered to the University of Cambridge a sum of £20,000 as an endowment of a Professorship of Naval History to be called after his second son, the Hon. Vere Harmsworth, who was killed in November 1916 at the battle of the Ancre while serving with the Naval Division. It must not be forgotten that this is the second chair that Lord Rothermere has founded at Cambridge, the other being the King Edward VII Professorship of English Literature, now held so ably by Sir A. Quiller-Couch. A fourth benefaction is that of Major David Davies and his sisters, who propose to give £20,000 to found a Chair of International Politics at Aberystwyth, to be associated with the name of President Wilson. We are still far from the level of American generosity, but here we have £80,000 offered within a month to assist the development of higher education in our Universities. These gifts form a hopeful augury for the success of the work of reconstruction with which the nation is faced. If other benefactors decide to endow scholarships tenable at the Universities—the great need at present is for scholarships in modern languages and modern history, of which there are so few—a far larger proportion of the population will be able to secure the advantages of a University education, and so be provided with the outfit necessary for training others and for success in life.

THE Annual Report for 1917 of the Chief Medical Officer of the Board of Education is exceptionally interesting, less for its facts and figures than for Sir George Newman’s illuminating comments and conclusions. Although he assures us that the schemes of medical treatment established by the Local Education Authorities have been maintained fairly well, and in some cases expanded, he again calls attention to the laxity of certain Authorities. But he rejoices that a policy of neglect is no longer possible. For, while under the old scheme the Local Education Authorities had medical *powers*, under the new Education Act they have medical *duties*. Under the old scheme they may act, under the new scheme they must act. Sir George regards it as proven that the School Clinic is the most convenient and efficient health centre for children. He shows too the advantage of preventive measures over treatment that is merely curative. Finally he reviews the results of the school medical service for the decade during which it has been in operation. That the results have been beneficent he has no difficulty in showing. It is not a question of demonstrating directly that the general health of school children has improved (this is by no means easy, since statistics of cases mainly serve as a clue to the efficiency of the means of detection), but rather of showing improvement in the conditions that are demonstrably conducive to good health. The rest may be taken for granted. And, as far as appearances go, betterment is palpable to the most casual observer. Extreme squalor has disappeared. Even if no more could be said, it is much to be able to say that the children of the slums are now in the main well-nourished and clean—clean in the ordinary sense of free from dirt, and clean in the euphemistic sense in which the word is used by the school nurse.

A DEPUTATION from the heads of the State-aided Universities and University colleges has recently waited upon the President of the Board of Education and the Chancellor of the Exchequer to ask for augmented grants. It is important that the claims of the non-professorial staff for increased remuneration should not be overlooked. The low scale of salaries at present prevailing is made evident from an analysis of the data collected from fifteen Universities and University colleges. It appears that out of a total of 329 lecturers, 63 per cent. receive salaries not exceeding £200, while the salaries of another 30 per cent. are between £200 and £300; seventeen lecturers receive salaries of between £300 and £400. A very large proportion of the actual work of the Universities must necessarily fall upon the non-professorial staffs, and in the national interest it is of the utmost importance that the conditions of status, tenure, and remuneration should be such as to attract and to retain in this service men and women best fitted to discharge it. Much of the work is highly specialized, and cannot be carried on by novices.

IN our last issue we expressed to Mr. Fisher the thanks of the teaching profession for the success which has attended his efforts to provide pensions for teachers. There is, however, at least one branch of the profession which does not benefit by the passage of the Superannuation Act. Dissatisfaction has been widely expressed

The Health of School Children.

Rhodes Scholarships.

Recent Benefactions to Universities.

The Position of the University Lecturer.

Pensions for University Teachers.

at the exclusion of University teachers from the scope of the Act. There is in existence a Federated Superannuation Scheme on a contributory basis for University Lecturers and Professors, but the benefits thus secured fall far short of those obtained under the new Act. For example, one University teacher, after twenty-seven years of service, is at present looking forward to an annuity of £30 per annum, half of which he will have bought by his own contributions. Under the Act he would receive an annuity of £250 per annum, with a lump sum of about £750 in addition. Further, the present scheme is applied only in the case of those University teachers whose salary exceeds £200 per annum. This means that over two hundred members of the teaching staff of the State-aided Universities and University Colleges of England, Wales and Ireland have absolutely no provision made for them as regards a retirement fund. Many of these have ten, fifteen, or more years of service to their credit. It is clear that the exclusion of University teachers from the pensions scheme will have a highly detrimental effect upon the supply of suitable candidates for the University teaching profession. The Universities are at one blow severed from the secondary and technical schools and the training colleges, and any interchange of teachers is made practically impossible. At a Conference of University Lecturers held at King's College, London, on November 30, it was decided unanimously to press for an extension of the pension scheme so as to include University teachers.

THE National Council of Domestic Studies is an authoritative body well qualified to deal with educational questions relating to housecraft. It consists mainly of experienced teachers together with representatives of wider interests. Its council has instituted recently examinations for the award of "Housecraft" and "Housekeepers'" certificates. These examinations are not intended as qualifications for teachers, but principally for girls in "advanced" courses in secondary schools, and, to a smaller extent, for women attending training schools of domestic economy who are desirous of being trained as housekeepers, "welfare" workers, and so on. The scheme is based on sound educational lines, and, judging from the personnel of the Council, confidence may be felt in the value of the course of training laid down. For the guidance of schools, a memorandum containing suggested syllabuses for various branches of housecraft studies and a scheme of instruction in "science as related to the domestic crafts" has been issued. The syllabuses are up to date, and quite practical, without being unduly narrow. We note, for example, the prominence given throughout to new methods and materials arising out of experience gained during the last four years, questions of cost, labour-saving devices, the applications of electricity in the home, and the inclusion under the heading of "house management" of "such simple instruction in local government and social questions as will help students to prepare intelligently for the increased duties and responsibilities of women." The science syllabus contains valuable suggestions to teachers, although it is open to criticism in certain details. The scheme is based upon the assumption that students have been grounded previously in the principles of physical and chemical science, which will probably be the case with students in advanced courses in secondary schools, but not with women working for the housekeepers' certificates.

A RECENT report issued by a Committee appointed by the Council of the Sheffield Association of Metallurgists and Metallurgical Chemists recommends that all students entering upon any specialized course of applied science should first have passed a general examination of matriculation standard. Such a recommendation from a body of manufacturers is a gratifying sign of the times and a welcome recognition of the supreme value of a broad general education, such as our secondary schools provide, as a preparation for successful work in technical science. The report suggests that the present low status of assistant chemists can be traced to a lack among them of the amount of general education represented by examinations of matriculation standard. It may be hoped that the recently instituted First School Examination, which the Board of Education are introducing into all State-aided secondary schools, will result in the majority of our secondary-school pupils in the near future being able to base their professional studies upon the sound foundation which a good general education provides. We hope the example set by the manufacturers of Sheffield will be copied in other industrial centres.

PERSONAL PARAGRAPHS.

SIR ALFRED DALE, Vice-Chancellor of Liverpool University, is resigning in September next. He has decided upon this step in the interests of the University, holding the view that the impending educational changes and the new problems that are arising necessitate the immediate appointment of a younger man, who can begin the work rather than carry it on after a beginning has been made. Sir Alfred would, in the normal course, retire in December, 1920, under the clauses of the Superannuation Scheme. The University Council has accepted the resignation with regret, and has placed on record its great appreciation of Sir Alfred Dale's invaluable services during the last nineteen years, first as Principal of University College, Liverpool, and afterwards as Vice-Chancellor of the University.

* * *

SIR WALTER DURNFORD has been elected Provost of King's College, Cambridge, in succession to Dr. M. R. James, now Provost of Eton and an Honorary Fellow of King's. Sir Walter Durnford was educated at Eton and King's, graduating fourth in the First Class of the Classical Tripos in 1869 and becoming a Fellow of the College. For the following twenty years he held a mastership at Eton, where he commanded the 2nd Bucks (Eton College) R.V. Returning to Cambridge, he was elected Mayor of the borough in 1905 and became Vice-Provost of King's and a member of the governing body of Eton in 1909. He has been a member of the Teachers Registration Council since 1913. Mr. W. H. Macaulay is to succeed Mr. Durnford as Vice-Provost.

* * *

THE University of Liverpool has offered the honorary degree of Doctor of Laws to President Wilson. It is hoped that it will be possible to confer the degree when the President arrives in England.

* * *

MR. D. J. LLOYD has been appointed Head Master of Port Talbot County School. The appointment is to date from Easter next, when the present head master, Mr. W. Barry, retires on the completion of twenty-two years' distinguished service. Mr. Lloyd, who is only thirty-two years of age, is a graduate in honours of the Universities of Wales and Oxford in classics. He is at present attached to the Royal Air Force as a schoolmaster.

THE RT. HON. WALTER LONG, M.P., has been appointed a Governor of Harrow, at which school he received his early education. The vacancy on the governing body was created by the death of the Earl of Lichfield.

* * *

MR. H. WILFRED CARTER, History Master at Bradford Grammar School, has been appointed to the Head Mastership of Marling School, Stroud. Mr. Carter was educated at Liverpool College and Hertford College, Oxford. He graduated with honours in History in 1907 and gained experience at Duke's School, Alnwick, and at Rutherford College, Newcastle-upon-Tyne, before joining the staff at Bradford Grammar School.

* * *

THE Salters' Company has appointed Dr. Martin Onslow Forster, F.R.S., to be the first Director of the Salters' Institute of Industrial Chemistry. A distinguished chemist, Dr. Forster has been Chairman of the Technical Committee of British Dyes, Limited, since July, 1915, and until recently a member of the Board of Directors. He is Honorary Treasurer of the Chemical Society and a member of the Council of the Royal Society.

* * *

CAPTAIN W. H. D. MARGESSON, R.N., is to succeed Capt. W. H. F. Montanaro, R.F. (retired), as Captain Superintendent of the Nautical College, Pangbourne. Captain Margesson joined as Naval Cadet in 1883, and first served as a Midshipman on the North American and West Indian Station in 1885. He retired in 1910 with the rank of Post Captain, but rejoined on the outbreak of war. He was appointed on the Naval Staff of the Admiralty and has done valuable work in equipping merchant ships with means for defeating submarines.

* * *

DR. HUGH PERCY ALLEN, Professor of Music in the University of Oxford, is to succeed the late Sir Hubert Parry as Director of the Royal College of Music. Dr. Allen is a Fellow and Organist of New College and Choragus of the University. He is a member of the Royal College of Music and of the College of Organists and also conductor of the Bach Choir. He formerly held appointments as organist at St. Asaph and Ely Cathedrals and Director of Music at Reading College. The late Sir Hubert Parry had been Director of the Royal College of Music since 1894. He was educated at Eton and Exeter College, Oxford, graduating Mus. Bac. after one year's residence and M.A. in 1874. One of the most scholarly musicians, he was a leader of the renaissance of modern English music. His literary works include "Evolution of the Art of Music," "Studies of Great Composers," "Life of J. S. Bach," "Style in Musical Art," and many articles in the well-known Grove's "Dictionary of Music." In choral music his most widely appreciated composition is the "Blest Pair of Sirens," and his "English Lyrics" is replete with gems of song literature.

* * *

DR. HENRY WALFORD DAVIES, organist and director of the choir at the Temple Church, has been appointed Musical Director to the University of Wales, Professor of Music at Aberystwyth College, and Director of the Welsh Council of Music. The appointment follows the recommendations of the Royal Commission, and the decision of Dr. Davies to accept office and to devote himself to the cause of musical education in Wales will be welcomed warmly throughout the Principality.

* * *

THE London University Extension Board has invited the Associations of Head Masters, Head Mistresses, Assistant Masters, and Assistant Mistresses to nominate representatives to attend the meetings of the Board, on invitation, for purposes of consultation with regard to the examination of schools by the University. This step will be cordially welcomed as making for a closer connexion between the schools and the University. Miss Escott (Clapham High School), Mrs. Jewel Pearce (Kensington High School), and Mr. W. H. Lovel (Emanuel School), have already been nominated by the

Head Mistresses, Assistant Mistresses, and Assistant Masters respectively. A similar representation of teachers has been conceded by the Universities of Cambridge and Bristol. Mr. A. Robinson, Wolverhampton, represents Assistant Masters on the Joint Committee for Examinations set up by the Cambridge Syndicate, and Mr. W. J. B. Westcott, Assistant Master Bristol Grammar School, has been appointed as a representative on the Committee upon Examinations for School Certificates set up at Bristol University.

* * *

MR. RICHARDS, formerly chief inspector of training colleges, is to succeed the late Mr. F. H. B. Dale as His Majesty's Chief Inspector of Elementary Schools. Mr. Richards is Chairman of the Departmental Committee on the selection of disabled soldiers and sailors for the teaching profession. Mr. Wood, late Chief Divisional Inspector of Elementary Schools in the North of England, will take up the position vacated by Mr. Richards.

* * *

MR. J. A. WILLIAMS, an assistant master under the London Education Authority, has been elected Mayor of East Ham. Mr. Williams has been a Councillor of the borough for some time and is one of the few members of the teaching profession to attain to high civic dignity.

* * *

MR. J. A. PALMER, Secretary to the Birmingham Education Committee, has intimated his desire to retire on the ground of ill health. He is to continue in office until the appointment of his successor. Educated at Plymouth, Mr. Palmer became assistant clerk to the School Board of that town. He was later appointed assistant to Colonel Pope, Clerk of the Bradford School Board, and was promoted clerk on the latter rejoining the Army. He entered the service of the Birmingham School Board in 1897 and was appointed Secretary to the Education Committee when the School Board was abolished in 1903. He has thus completed twenty-one years' service at Birmingham, and during this period the number of children under the control of the authority has increased from 60,000 to 180,000. Mr. Palmer has been associated with the great educational reforms which have been carried through in recent years in Birmingham, and it is due to his great administrative power and deep interest in the cause of education that the educational needs and requirements of the locality have been secured with such smoothness and success: his work has won him the respect of all educationists. Mr. Palmer has been President of the Conference of School Board Clerks, the Association of Directors and Secretaries of Education, and the National Association of Education Officers. With Sir Robert Blair he has had the distinction of holding the two latter presidencies in the same year.

* * *

MR. EDWIN STEWART CRAIG, Assistant Registrar of Oxford University, has been elected Fellow of Magdalen College. Mr. Craig, who is a native of Belfast, received his early education at St. Mark's School, Windsor, and went to University College, Oxford, as a Mathematical Scholar in 1883. He obtained First Class in Mathematical Moderations (1884) and in the Final Mathematical School (1887). He was appointed Lecturer in Physics and Engineering Science in his College in 1909, and acted for some years as Demonstrator under Prof. Townsend in the electrical laboratory. He became the first Assistant-Registrar and Secretary to the Boards of Faculties in 1907, and has discharged the ever-increasing duties of this office with much success. He has also taken a very keen interest in the military activities of the University.

* * *

THE Council of Westfield College (University of London) have appointed Miss Bertha S. Phillpotts, M.A., O.B.E., to the vacant Principalship. Miss Phillpotts has many family connexions with education and scholarship. Her father is the late Head Master of Bedford School, her uncle was Head Master of Rugby, and she is closely related to the Heads of Girton College and Lady Margaret Hall. She is herself a

scholar of distinction and has had a varied experience in University work. At Girton she obtained First Class Honours in the Medieval and Modern Languages Tripos, and afterwards lectured and held the post of Librarian there. Later she became the first holder of the Lady Carlisle Fellowship at Somerville College. Her studies have been concerned with the early history and literature of Scandinavia, and she has contributed articles on these subjects to the "Encyclopædia Britannica" and to the "Encyclopædia of Religion and Ethics." She has worked at the University of Copenhagen, and pursued her special line of research in various Northern European cities. Some of the results of her investigations have been published in a book entitled "Kindred and Clan," a valuable and original contribution to the knowledge of medieval history. Miss Phillpotts is the only woman Fellow of the Royal Society of Antiquaries, Copenhagen. She has lately been attached to the British Legation at Stockholm, and in June last was decorated in recognition of her services. During recent years Westfield College has extended its work in several directions. The appointment of Miss Phillpotts will secure both its best traditions and its continued development, and she is sure of a welcome from the University of London.

* * *

THE death is reported, from pneumonia, of Mr. R. P. Gregory, Fellow and Tutor of St. John's College and University Lecturer in Botany, Cambridge. Educated at St. John's, Mr. Gregory took First Class Honours in both parts of the Natural Science Tripos 1900-2, with special distinction in Botany. In 1904 he was awarded the Walsingham Medal for research in botany. In the same year he was elected a Fellow of his college and eight years later he was appointed tutor in natural science. On the outbreak of war he joined the University O.T.C. and carried on the instruction of cadets for some time. Later he was gazetted to the 1/6th Gloucester Regiment and was badly gassed three weeks after his arrival in France. He resumed his tutorial work last September on receiving his discharge from the army.

* * *

THE death of Miss Esther Gadesden, formerly Head Mistress of the Norwich High School for Girls for more than twenty years, will be deeply deplored in Norwich. Although Miss Gadesden retired nearly twelve years ago, the influence of her work is still felt in the district, where she was known as a keen and successful organizer and a woman of wide interests and deep sympathy. She was the elder sister of Miss F. Gadesden, Head Mistress of Blackheath High School, and for many years Treasurer of the Federal Council of Secondary School Associations.

* * *

MR. J. D. WHITE, Modern Language Master at Haileybury College, has died owing to an injury to the spine caused by a fall in the dark from the parapet on the south terrace of the college. Mr. White had retired from the college after forty years' service, but returned to his position for the duration of the War owing to the scarcity of junior masters.

ONLOOKER.

THE Historical Association has issued as its Leaflet No. 46 (November, 1918) a list of selected books relating to the history of the British Empire Overseas suitable for the use of schools and students. The list given does not pretend to be exhaustive even of the more accessible books, and it designedly excludes monographs and specialist works for which reference must be made to the authorities quoted in the first section. Practically all the books mentioned here are in print and easily obtainable, but the few older books that are referred to can be readily purchased second-hand. Distinctive marks have been attached to books suitable for use as class textbooks and to those which should be included in all school libraries. College and public libraries ought to contain all the books mentioned in the list. Textbooks and readers that are suitable for use only in elementary schools have not been included. Full particulars as to membership of the Association can be obtained from the Secretary, Miss M. B. Curran, 22 Russell Square, W.C. 1.

DR. E. C. SELWYN.

THE untimely death of Dr. Selwyn will be lamented by many generations of boys of Uppingham School, over which he presided for twenty years, and by a large circle of friends. Before his appointment to Uppingham, where he succeeded Thring—a task none too easy to undertake—Selwyn had been for about five years at Liverpool College. There he raised the numbers and wisely arranged for the removal of the site of the Upper School from the business part of the city, though the new buildings were not completed during his time; he improved the character of the staff by wisdom in his choice of assistants, a quality which he displayed at Uppingham also.

He was himself a good and enthusiastic teacher, and always took a large share of the sixth-form work; a careful and accurate scholar, he insisted on the same qualities in others; he was alert and stimulating, always looking out for fresh ideas, at times, perhaps, a little apt to pick them up and drop them again; but he was never dull, never stereotyped, but humorous, even surprising; much liked by the boys with whom he came into closest contact; no seeker after popularity, he never swerved from what he thought was right; occasionally a little apt to say what first came into his mind, when reticence would have been wiser; he could quarrel, but he had one inestimable quality, he bore no malice—he liked a man.

The story goes that on one occasion a candidate for a mastership stayed the night in the School House; at breakfast next morning he was seen by Mrs. Selwyn to be dallying with his egg, and she said, "I fear, Mr. —, your egg is not good." He agreed. "What, what!" said Dr. Selwyn, "a bad egg at my table; certainly not, certainly not," and the young man ate that egg! Selwyn's sardonic comment after he had gone was merely, "Shan't appoint that man; very weak about that egg!" The story is only partly true, but has become in the process of embroidery more illustrative of the man. So there was plenty of life in the school while Selwyn ruled it.

The standard of work and knowledge was somewhat low at Uppingham at the time of his appointment; he quickly raised it in a most marked degree: the staff was improved; new buildings were added and new houses built; a cadet corps was set on foot and everybody taught to shoot; a new water supply—a most essential want—was secured, mainly through his energy and persistence; the school in many ways developed, in fact, without the loss of its peculiar character and traditions. He raised the numbers, strengthened the discipline, and was to the last, even after he had retired, keenly devoted to the best interests of the school; all that touched Uppingham touched him even to the end of his life.

E. H.

DR. PERCIVAL.

By AN OLD PUPIL.

"WE were climbing up from the town to the station, when suddenly, far above us, on a high bank against the sky-line, was P., a solemn and almost awful figure and face—not melancholy, but stern and hard: far reach of eye, the pose of memories and back-seeking." This is a picture by T. E. Brown of the late Bishop in the year he left Clifton, looking down upon his old school at Appleby. He was of Westmorland stock, and from Appleby Grammar School he went to Queen's College, Oxford, of which society, after the highest distinctions in the schools, he became Fellow. In 1860 he began his life as a schoolmaster at Rugby, under Temple, and it is curious to his later pupils to learn that at first he had difficulty in maintaining discipline. In September 1862, as Head Master of Clifton, he addressed the first sixty boys in the new Big School, and sounded the note which rang again and again in after years.

"If you desire to belong to a place of which you may be

justly proud: if you wish to hear this college spoken of as one that bears a high name, as a place where truth and uprightness and purity and all Christian virtues are held in honour: as a place where all that is base and unworthy is hated and despised—then remember that it rests with you to give it that name." Any Cliftonian or Rugbeian will feel that these words bring back echoes from chapel, Big School, or Sixth Form room, recalling that austere presence and northern accent driving home the sense of responsibility, the scorn of base-ness, the duty of loyalty to the common life. He was no speaker, but yet his words bit and gripped as fluency never did. Inside the ice there was an inner fire that was felt in his struggling utterance. Clifton, as someone said, was a *tour de force*. In seventeen years he brought it into the front rank of English schools—building, financing, organizing, breaking a path for science and modern languages, and kindling the spirit which was to make the work worth doing and keep the new growth alive. He was a prophet in his idealism, a Whiteley in his grasp of business. He made great demands on masters and on boys; he had so much strength and power of work himself that sometimes he called for more than could be given, but through the mass he shot the stimulus of energy and zeal and public spirit. It was through the Sixth that at Clifton and at Rugby he influenced the school. He never gave the rule into the hands of athletes pure and simple—the broad way that leads to destruction. But the Sixth were required to take their part in all the life of the school and really lead, and this is the true public-school tradition. It could not be said that in the classroom sense he was a great teacher, and yet the lessons in Plato or Thucydides were deeply impressive. The austerity of the old historian was akin to his own soul. To take an essay to him was to feel a scorching abhorrence of false sentiment, cheap rhetoric, and slipshod thought not easily forgotten.

One incident of the Clifton Sixth room was long quoted as characteristic. He had a way of tilting restlessly upon his seat, and once fell over. The head of the school, now an excellent clergyman, rushed forward with the words, "Oh, Sir, are you much hurt?" "Sit doon, you silly fellow!" was the stern reply. Stern and hard, as Brown's picture says, a Stoic like one of the old Romans whose virtues he admired, his boys believed in him, and looked up to him with a reverence in which awe prevailed. And yet they knew he had a human side, a dry humour with a rare, attractive smile; a love of riding and outdoor life, and an expectation, seldom disappointed, that the games should be as strenuous as the work. He gave much; he expected much; he did not deal in easy sympathy, and he was singularly unaffected by the opinion of those about him. What these qualities meant in his later public life others must estimate; but at school it must be said that none passed under him without owning his power, and few without feeling his greatness. It was at Clifton that he first became known to fame, and in his final resting-place in Clifton Chapel "*posteritati narratus et traditus superstes erit.*"

THE Modern Language Research Association announces a Conference to be held at Bedford College, Regent's Park, N.W. 1, on Friday, January 10, at 3 p.m. The subject for discussion, "The Promotion of Modern Language Research among Teachers," will be introduced by Prof. F. S. Boas, and contributions from non-members as well as from members will be welcomed. The Secretary, Mr. E. Allison Peers, 24 Beaufort Road, Kingston-on-Thames, will be glad to send tickets for the conference to any who may wish to attend; copies of the provisional prospectus will also be sent to any intending members who apply for them.

THE Exhibitions offered annually by the Associated Board of the Royal Academy of Music and Royal College of Music, which entitle their holders to free tuition at the R.A.M. or the R.C.M. for two or three years, have been awarded to the following candidates:—Irene V. Hyman, London (Pianoforte), Lina S. Collins, London (Pianoforte), and Eleanor L. Andrews, London (Violin), at the R.A.M.; and Mabel J. Le Fèvre, Bournemouth (Violin), William Stuart Jones, Cardiff (Violin), and Eileen N. Sharp, Brighton (Singing), at the R.C.M.

THE CONTINUATION SCHOOL PROBLEM.

1. THE SUPPLY OF TEACHERS.

SOME twenty thousand additional teachers, it is estimated, will be required when it is compulsory for young persons between fourteen and sixteen years of age to continue their education. The task confronting the Board of Education and the Local Education Authorities, therefore, is one of some perplexity and difficulty. The Consultative Committee, some years ago, prepared a useful report on attendance, compulsory or otherwise, at continuation schools. It showed that, of 691,000 children fourteen years of age and under sixteen, 77.47 per cent. were not attending any day school, and 64.10 per cent. were not continuing their education in any day or evening school. Regarding children aged fifteen and under sixteen, the percentages in both cases were, as might be expected, somewhat higher, being 89.46 and 76.73 per cent. respectively. At the present time probably there are about one and a-half million children in England and Wales fourteen years of age and under sixteen, and, if 25 per cent. of these are assumed to be in either day or evening schools, the estimate will be approximately correct.

This proportion represents the position of affairs under the voluntary system; the differentiation between those who have the desire and ability to take advantage of opportunities—and others. Under compulsion—more particularly when the work of the later stages of elementary schools is improved, and the age of exemption is actually, and not nominally, fourteen—it is to be assumed that the proportion of boys and girls capable of benefiting by further systematic teaching, and desiring to do so, will considerably increase. A sanguine reconstructional enthusiast might expect that in a very few years 50 per cent. of young persons would be found in secondary, technical, and central schools, or pursuing regular courses of further training in continuation classes.

Teachers, trained or otherwise qualified, now available for the existing service are insufficient in number, and to staff a considerable extension of the service new sources of supply will have to be found. Among possible sources, men demobilized from the Army and educated women who have been employed in various public or private developments of War work are the most hopeful. Given a reasonable standard of educational attainment, and the desire to adopt teaching as a profession, such men and women, after some experience as student-teachers in a suitable institution or a short course of instruction in a training college, should be well qualified for regular duty.

After providing suitable facilities for the further education of boys and girls capable of taking advantage of them, there will be at least a moiety who are not likely to respond to the requirements of systematic teaching. These will include the dull and backward, the incorrigible laggards, and those with no desire to learn by formal process and little ability to do so. As far as these young persons are concerned, the titles "continuation" and "school" are perhaps inappropriate. The aim should not be a continuation of the limited standard of attainment reached in the elementary school, nor should it be scholastic. Consequently, in addition to a large extension of what may be termed recognized educational opportunities for willing and competent pupils, it would seem to be wise to contemplate the establishment of institutions of an entirely different type. While educational in the best sense of the term, they would not conform to accepted standards of pedagogic effort. Their work would be moral and social rather than scholastic, and for their successful organization "freedom, variety, and elasticity" would be essential.

The kind of discipline and training commending itself as particularly suitable for such institutions is that associated with the Boy Scouts and Girl Guides movement. With comparatively little adaptation, or extension, the methods of those admirable voluntary developments might accordingly serve as the basis of continuation schools for 50 per cent. of boys and girls between fourteen and sixteen years of age. If so, it follows that the

best "teacher" for institutions of this type would be the man or woman capable of discharging with efficiency and success the duties of Scoutmaster or Guide Mistress. Where are they to be found? As in the case of the regular educational service, although different qualities would be sought, the supply should be forthcoming from men now leaving the army and women who have done war work. There are large numbers who may not possess diplomas and certificates, but who "know themselves and the world," who understand discipline, are interested in the development of human material, and, with help in special directions, could deal effectively with boys and girls on the lines indicated.

The officers of the Board of Education and others, who are now investigating the credentials of men about to be discharged from the Army who desire to become teachers, may feel obliged to reject many otherwise entirely suitable applicants, on the ground of deficiencies in educational training. Such "rejects," whatever their previous occupation, trade, or experience may have been, should, if they have the requisite personal qualities, be regarded as possible recruits for duty in part of the service, at any rate, to be performed by continuation schools.

2. THE CURRICULUM OF THE PART-TIME CONTINUATION SCHOOL.

IN any discussion of the curriculum of the part-time continuation school it is necessary from the first to dismiss the idea that there is "continuation" in any real sense except that of time. The number of hours a week is so small compared with the twenty-seven or so of the public elementary school that the continuation school curriculum must of necessity be narrower. The fact, again, that leaving school and starting work alters the whole outlook on life of the boy or girl renders it necessary to approach subjects in a different way. Finally, the fact that a boy or girl under fifteen or thereabouts will study any subject as a matter of duty, while a boy at any rate over that age will exert effort only in connexion with a subject which interests him, renders it necessary to provide alternative curricula, and to have regard to the occupations of the pupils.

If these facts could be ignored, one might say at once that some English and arithmetic, some manual occupation, some study of modern history, especially the industrial and social changes since 1700, which afford an explanation of existing economic and social conditions, an introduction to physical and biological science, and physical training, would meet the requirements. As it is, we must look for a different basis, and seek to secure the same ends through curricula framed on a different plan.

Assuming that physical training is common to all curricula, those pupils who have entered or are about to enter upon an industrial or commercial career will demand curricula on the lines of the preliminary technical and commercial courses now conducted in evening schools. The first of these comprises:—English, mathematics, drawing, experimental science; and the second, English, arithmetic and accounts, shorthand, or book-keeping.

The demand will be reinforced by parents and employers who are able to bring pressure to bear upon Local Education Authorities. Each of these courses occupies six hours a week, or about 150 hours a year. Each of them, moreover, is capable, in the hands of well-informed and skilful teachers, of contributing in a not inconsiderable degree towards a liberal education, and, with the longer duration of the course and greater facilities for homework, this aspect could receive greater attention. The syllabuses could be widened both in scope and interpretation. The essential feature of the courses at the present time is not that they are technical or commercial, but that they are preliminary, and this is especially true of the first one.

A more difficult problem is to provide for that type of pupil who will not, in existing circumstances, come to an evening school, or who comes only for a short time and then leaves because the instruction appeals neither to the interests of his

occupation nor to the interests of his leisure. Generally speaking, his occupation has no technical interest at all; but he is a young citizen; he will have rights and responsibilities, and, if he can be persuaded to take an interest in the historical, social, or scientific aspects of his environment, so much the better. Physical exercises are almost sure to attract him, and most likely some form of manual occupation, including gardening.

The manual occupations should be rather of the handy-man type than systematic carpentry or metal-work. A youth who has learnt how to mend his own boots, build his own hen-coop, and cultivate his own garden-patch has acquired wholesome habits of utilizing leisure which will contribute to his own happiness and render him a more useful member of society.

Those girls who are engaged, or are about to be engaged, in commerce will doubtless follow the commercial course, and others a domestic course with a fair amount of time to English. In view of the variety of vocations which are now open to women, these do not exhaust the possibilities. But the fact that employment in many cases ends with marriage renders it undesirable that any girl should escape domestic training altogether.

Apart from the curricula which have been set out here there is room for others where there are teachers of special knowledge or capacity or pupils with special needs. What it is desirable to avoid, however, is a "hotchpotch" of subjects. The curriculum must have coherence, unity, and aim, or it will fail in its purpose. A certain amount of narrowness is inevitable, and therefore it is the more to be desired that the dry bones of instruction in classroom, laboratory, workshop, kitchen, and workroom should be clothed by occasional lectures, visits to museums, art galleries, and places of interest, reading circles, debating societies, rambling clubs, and other agencies supplementary to, and less formal than, those which necessarily hold sway in the school. Finally, if in the development of this side of the work self-government is encouraged, the pupils will gain more than information. They will gain that measure of responsibility upon which sane citizenship so largely depends.

THE HIGHER SCHOOL EXAMINATION IN ITS RELATION TO UNIVERSITY COURSES.

THE Higher School Examination is intended to test the work of secondary-school pupils who have stayed on for two years after passing the First School Examination, taking an advanced course approved by the Board of Education. One who passes the Higher Examination is assumed to be fit to enter upon an Honours Course at a University. The great majority of the schools concerned are State-aided schools; and most of the pupils will go on to a University other than Oxford or Cambridge.

How is the scheme going to work out in practice? To give definiteness to what we have to say we will take the case of London University and schools taking its examinations. Probably our considerations will apply to the relation of any newer University to any secondary school.

At the very outset we are confronted by the mistake that was made in fixing sixteen as the age of ripeness for University work. The standard of the London Matriculation Examination is such that it can be passed by any intelligent boy of fifteen. At London you can matriculate at sixteen and get your degree at nineteen; at Oxford or Cambridge the age of entry is usually nineteen, and the degree is obtained at twenty-two. Can anyone doubt that it is better for a University to have students aged nineteen to twenty-two than those appreciably younger? The Board of Education clearly think so and desire able boys and girls to stay at school until they are

eighteen or nineteen; that is the idea underlying the advanced courses. How are the schools taking up the idea? and what is the attitude of the University of London?

The schools (and the parents) ask, quite rightly: "What does it lead to?" If the boy or girl wants to take a London degree, will it be an advantage to have taken the Higher Examination? A year's work (not, it is true, on lines altogether congenial to a progressive schoolmaster) enables a pupil to pass the External Intermediate Examination in Arts or Science. That is one of the grotesque results of making sixteen the age for matriculating. The pupils do easily at school what is supposed to be work of University standard. It would be comic if in these days we had a right to see anything but tragedy in our educational blunderings.

The Higher School Examination demands two years' work. You can get the External Intermediate in one year; what weight will the Higher Certificate carry if you decide to become an internal student of the University? Although it is manifestly in the best interests of the University to attract Honours students of eighteen and nineteen, we are still waiting for an answer to that question. No sane person suggests that there should be a reduction of the three years which we recognize to be the minimum for an Honours course; but—what about the Internal Intermediate examination? The question suggests itself at once: Why should there be an Internal Intermediate at all? It is open to the colleges to test the undergraduates' progress at the end of each academical year, as is done at the older Universities; surely that should suffice. At present there is evident reluctance to promise exemption from the Internal Intermediate to those who shall have passed the Higher School Examination; and many are deterred from preparing for it owing to uncertainty as to the weight it will carry.

Now, to be fair, this reluctance on the part of the internal authorities is not wholly unreasonable. Students who had passed the External Intermediate at school or by a crammer's help have often been found sadly wanting.

It has indeed been urged that it is wrong of the schools to attempt anything beyond the Matriculation standard, on the ground that they lack equipment, that they lack teachers for the advanced work, and that there is a fundamental difference between the methods of study at school and at the University. It will not take long to remedy the present deficiency of equipment. The alleged lack of competent teachers would be a more serious difficulty, but, if this sweeping charge be true, who is to blame? Who taught our teachers but the Universities? And, if these are incompetent to train teachers able to give instruction in their subjects to young people of seventeen or eighteen, then there is something radically wrong with our Universities. The difference between school and University methods of study is a very vague one. Obviously you can expect more independent and more strenuous work from a student of twenty than from one of seventeen; but it seems to be a question of degree rather than of kind. We know school teachers whose stimulating and inspiring influence is wholly admirable, and there are University teachers whose work is at best glorified spoon feeding. Do Oxford and Cambridge complain because they do not get their students at seventeen?

The present situation is intolerable; something must be done, and done soon, if the best brains in our secondary schools are not to be deprived of University teaching when our country needs trained thinkers as it never did before. The State and the Local Authorities must see to it that no able boy or girl is prevented by lack of means from staying at school for two years after the first examination, with a view to preparing for an Honours course to begin as soon as the University is entered. Entrance scholarships to the Universities have done more harm than good, and some subjects are excessively favoured by them; the funds should be used for assisting all who have passed the Higher School Examination well and need money for their University education.

The advanced courses should be liberally planned, allowing, for instance, for those who on entering the University read for a degree in commerce. Experiments (especially in "Modern Studies") should be encouraged; some examining bodies pre-

scribe the course of study, designating the books to be read, which is to be deprecated.

The newest Universities must get into close touch with the secondary schools that are to feed them. It is on the foundations laid by the advanced courses that their own Honours courses must be built. They should not meet with querulous criticism the development of the new type of secondary school, which is wholly right in desiring to have a real top. They should rather welcome the prospect of getting more mature and better prepared students; and it should be their aim to help to this end by training competent teachers. They should certainly refuse to recognize sixteen as the age for matriculation, which should be raised to eighteen. Then the Universities would cease doing all work of low standard and more worthily perform their proper function; and the evolution of the twentieth-century secondary school would proceed in a healthy way, without danger of arrested development.

SCHOLARSHIPS TO THE UNIVERSITY

By J. L. PATON.

WE have succeeded now. We have made the world safe for democracy. Our next task, which brooks no delay, is to make democracy safe for the world. Difficult times lie ahead. It took England twenty years to tide over the difficulties which were the aftermath of the Napoleonic wars. It will take us at least a generation. In industry, in commerce, in the professions, in the administration of national and Imperial affairs, we shall need men of knowledge and trained intelligence. No other national institutions have given so freely of their young manhood as our Universities. And no men will be so difficult to replace as these, for already before the War the proportion of University men to the general population in this country was—in spite of all recent developments—conspicuously smaller than in any other progressive country. A nation's educational system is said to be a reflection of itself, and John Bull's educational system was, like John Bull, somewhat undeveloped in the top story. Now the supply is still more inadequate. The need is vastly greater. In any forward-looking scheme the really "pivotal" persons will be the men and women of higher training. Therefore no boy or girl who has the ability to achieve this higher training can be spared in the rebuilding of our national life.

The secondary schools are seeking a larger outlet. They are filled to their utmost capacity—one might say beyond it. Every year they are shutting the door to thousands of boys and girls who are well qualified to enter and can pay the fees. But there has been no corresponding increase in the provision of University scholarships.

The Universities must be made more accessible. Not only pupils from secondary schools are seeking entrance. There are many soldiers, some of them disabled for manual work, there are many fresh home from the prisoners' camps (civilian and military alike) who have been using their period of enforced inaction to prepare for the University.

This demand must be met and, as the need is national, none but national action can meet it adequately. The supply of endowed scholarships is sporadic, and some Local Education Authorities do nothing to supplement it. What measures are to be taken?

1. This is not a case for individual competition. Any pupil who passes the Higher Certificate Examination should without further ado receive the offer of free education at a University or other institution of similar rank. If such pupil needs financial assistance, his needs should be met—this at the State expense.

2. The cost of residence at the University should be reduced. This means a simplification of life. If such simplification resulted in the disappearance of "the bloods" who give themselves to the cultivation of waistcoats and mental inertia, all the more vacancies for those who take their work seriously.

3. To prevent over-supply in any special profession, or the development of "an intellectual proletariat," the prospective needs of each profession, of industry and commerce, should be assessed, and the inflow of students into the various faculties regulated accordingly.

4. The Greek and Latin for which Cambridge and Oxford have stickled so long must go, and any British Matriculation Certificate be accepted by every British University, provided that the subjects in which the student has passed qualify him for entering on the studies of the particular faculty for which he seeks admission.

SCHOLARSHIPS FOR OVERSEA SAILORS AND SOLDIERS.

THE letter which appeared under the above heading in the *Times* of November 30, over the signatures of Lord Selborne, the President of the Board of Education, the First Lord of the Admiralty, the Secretary of State for War, and the Colonial Secretary, does not appear hitherto to have received the attention which it deserves at the hands of that increasing number among us who desire to think and act imperially. And yet the bond of union between the Old Country and the Dominions can in no sphere be more securely knit than in that of education.

This was the conviction which inspired the foundation of the Rhodes bequest—a bequest which, if it has not borne the fruits expected of it, has yet contributed not a little to a more sympathetic understanding between the young men of Great Britain and of the United States, to say nothing of the feeling of comradeship which it has engendered between the University of Oxford and the younger Colleges in Canada, Australia, New Zealand, and South Africa. The intrinsic weakness, however, of the Rhodes Trust has always been that it has not brought the Overseas Colleges and Universities into touch with the new Universities of Great Britain, such as Manchester, Birmingham, Sheffield, and Leeds. Close observers, indeed, have noticed that the *alumni* from Overseas have never quite imbibed the atmosphere of Oxford, or assimilated the spirit which animates the products of our public-school system in England. These students value the *camaraderie* and spirit of the public-school boy, but criticize the narrow range of his sympathy with the classes below and beyond him. Hence a certain aloofness of view on the part of the Rhodes Scholars has been observable.

The extension of a scholarship scheme, therefore, which embraces the new Universities in Great Britain is all to the good. Indeed, Lord Selborne, in one paragraph of his letter, seems to understate the value of this extension when he says; "Many—not only of the older but also of the newer—Universities in this country afford special opportunities for the pursuit of science, and of social, economic, and industrial studies." One would have thought that the "pursuit of science" and "industrial studies" particularly, had been achieved far more markedly and successfully at Manchester and Birmingham than in the cloisters of the ancient University. It is fair, however, to remember that Lord Selborne is an Oxford man.

The scheme is admirable in conception, though it is only at present in an inchoate state. The capital sum of £12,000, which has been raised during the last fifteen months, has apparently been, or is in the process of being, exhausted in the payment of scholarships varying in value from £150 to £250. Lord Selborne and his co-signatories now appeal for no less a sum than £50,000, which it is proposed to capitalize, only the income being applied to the payment of scholars.

If this be the meaning of the scheme it ought to receive generous and substantial support. A permanent inter-scholarship scheme is required if a real touch is to be maintained between the Old Country and the New. The idea itself is not entirely original. It was propounded about ten years ago by two or more of the more progressive head masters of our

public schools, but fell through on account of lack of support. It resulted, however, in an interchange of teachers between some of the English public schools and those in the Dominions, which had happy results in broadening the thoughts of the pupils under their charge. In the wider sphere of University life the introduction of young men from our Overseas Dominions who have served in the field and aspire to be learners in academic spheres can hardly fail to bring about results of imperial importance.

THE "FREE-PLACE" SYSTEM.

A COMMITTEE of the British Association has produced what is probably the most searching and impartial report on the "Free-place System" yet issued. Of the system itself it is pithily remarked: "Like many other illogical devices it has shown during its ten years' existence that it is workable and that it possesses a remarkable amount of vitality." Both schools and "officials" were called as witnesses, with the result that of the schools questioned 42 per cent. sent replies, while 65 per cent. of the administrators of 125 counties or county boroughs, to whom papers requesting information were sent, answered the questions, which dealt with ability, physique, corporate life, dinners, social status, tenure, &c.

Before turning to the report and its contents, we may, perhaps, express regret that the Committee has not touched on some points that seem to arise naturally out of the terms of reference. The actual effect of the free-place system upon secondary education does not appear to have been fully investigated, so long as we are without comments on: The standard of work in schools now admitting free-placers compared with their previous standard, on the reduction of the usual 25 per cent. in certain schools that draw large grants of public money in return for very little educational work, on the possible results that the new Act may have on the length of school life of free-placers.

The criterion of the advantages of the system, of course, is the subsequent character and ability of the free-placer in his after-school career.

Though the report should be studied as a whole, we can unfortunately only print the conclusions in full, and must content ourselves with glancing at the rest, which is divided into five parts.

Part I.—Introduction.

A history of the system, showing how Mr. McKenna started to democratize the schools by securing for the humblest in the land an opportunity of ranking among the aristocracy of intellect. The genesis of the system is declared to be the outcome of a struggle between two forces: the Board, that desired in the interests of education to increase school resources by raising fees, and certain Local Authorities, that strove to make education cheap, and accessible to any child that sought it, by charging fees of a shilling a week or less. The resultant of these forces is the free-place expedient. The qualification of a candidate, two years at a public elementary school, is described as a compromise, which as a real solution seems illogical and haphazard.

When this question comes up for discussion the writer always thinks of a Head of such a school, whom he knows, who told him he would not, and did not, ever send his children to an elementary school.

Part II.—Information derived from Heads of Schools (384 replies out of 910 circulars).

Proportion of Free-Placers reaching Matriculation Standard.—As these returns (says the Report) are very difficult to understand they are not included in the analysis—c.g. a large school in the Midlands, which is represented on the Head Masters' Conference and has obtained a large number of University scholarships, states that 13 per cent. of the free-placers reach matriculation standard, whilst a small mixed school in the

north of England gives the percentage as 80. This is only one of the many examples, and it would seem that either educational results vary inversely as the standing of the school, or that different Head Masters have different ideas as to what is meant by "matriculation standard." It is probable that the explanation is to be found in the following, which is typical of a large number received:—"A satisfactory proportion reach the standard of the Junior Oxford and Cambridge Local Examinations; a few reach matriculation standard, but the majority leave at too early an age to do so."

Generally speaking, the standard of free-placers seem to be satisfactory. Complaints are registered that the competitive examination fails to discover the best candidates. (It is not every Authority that tests its candidates as admirably as Kent does.)

Part III.—Information derived from Officials

(81 replies out of 125 circulars).

The most interesting statement in this portion of the evidence is that only about 35 per cent. of those who answered the question considered the ability of free-placers to be above that of the fee payers. (The comparative standard will naturally vary from school to school. Where fee payers come from more "educated" homes than the free-placers, it is found that the lack of everyday information of the latter puts them at a disadvantage, which only rare ability compensates.) The tendency of elementary-school teachers to keep back promising pupils from competing for scholarships is reported, happily, to be decreasing.

Part IV.—Numerical analysis of Opinions received from the Schools affected.

One cannot help thinking that some day such a table will bear a different complexion, when only "scholars who are qualified to profit by the instruction given in schools" are admitted to them, and not a fixed number each year, whatever the standard of the fixed number may be.

Percentage of Schools not satisfied with the System.

Schools with more than 40 per cent. of free-place holders, 30 per cent.; between 20 and 40 per cent., 45 per cent.; less than 20 per cent., 54 per cent. Schools with more than 40 per cent. of ex-public elementary pupils, 42 per cent.; between 20 and 40 per cent., 66 per cent.; less than 20 per cent., 58 per cent.

Conclusions and Recommendations.

1. The replies received to the questions asked from the various authorities prove that the system is, as a whole, acting well in schools in which more than 50 per cent. of the pupils are drawn from the elementary schools; the difficulties met are almost entirely confined to schools with a smaller percentage of ex-elementary school children. There is, however, but little doubt that some of the children now holding free places would derive greater educational benefit from a course at a higher elementary, junior technical, or trade school.

2. Free places should not be awarded to children entering the secondary schools over twelve years of age; otherwise the work of such schools suffers.

3. A good midday meal is essential for those who have to attend school at some distance from their homes; but the average charge for this is more than the parents of many free-place holders can afford to pay. It should be the duty of the school or the Local Authority to see that no scholar's education is impaired from this cause.

4. To make the free-place system fully efficient it is necessary that in many cases maintenance grants should be given for the years of school life above the age of compulsory attendance at a full-time day school. This grant should be of about the value of the average wage of the children of the same age in the district; should be made by the Local Education Authority, acting on the advice of the school authorities; and this advice should be given only after careful inquiry into the needs of each individual case. If such grants are made, it is believed that the present temptation to parents to remove promising pupils from secondary schools before they have been able to derive full benefit from them will be removed.

5. The strength and efficiency of the free-place system is dependent for its success on the provision of greater facilities for the

support of secondary-school children of exceptional ability at the Universities and higher technical schools. This can be met only by the provision of a larger number of scholarships from secondary schools, and these of greater value than is at present the case.

Unless supplemented by large school scholarships, it is, for example, nothing but a mockery to offer a scholarship of £40 or £50 a year tenable at Oxford or Cambridge to a candidate whose home circumstances do not permit of a very substantial addition thereto being made.

6. It should be possible to remove from the free-place list the names of pupils who are reported for habitual laziness; such removal to be made by the governing body of the school acting upon the report of the head master.

7. The award of a free place should not be based exclusively upon the results of a written examination, but in conjunction with an oral examination conducted by the head of the secondary school with the aid of one or more persons appointed by the Local Education Authority from the contributory schools.

8. The free-place system should be available for all classes of the community. Those parents who have made an effort to forward their children's education by paying fees for them whilst young should not be prevented, as at present, from gaining the benefit of a free secondary education. The difficulty may probably be best met by ruling that all candidates must have been educated for two years in a school inspected by the Board of Education and classed by that Board as efficient.

TOPICS AND EVENTS.

GEOGRAPHICAL ASSOCIATION.—The annual meeting of the Geographical Association will be held on January 3 and 4. On the first day at 3 p.m., at the Royal Geographical Society's House, Kensington Gore, S.W.7, Mr. Hinks will give an address on War Maps. The presidential address will be given at the London Day Training College at noon on the second day by Prof. Grenville Cole on "The Narrow Seas and the Arctic Route to Muscovy." At 3 p.m. Mr. Barker will speak on "The Historical Geography of West Africa," and at 5 p.m. a discussion will take place on "When and how often should we teach the Geography of the British Isles to our Pupils?" led by Miss D. D. Adam and Mr. C. B. Fawcett.

MODERN LANGUAGE ASSOCIATION.—The annual general meeting of the Modern Language Association will be held at University College, Gower Street, W.C.1, on January 8 and 9. The presidential address will be held at noon on the first day by the Earl of Lytton. At 2 p.m. a discussion on "Advanced Work in Modern Studies" will be opened by Mr. H. Nicholson. At 5 p.m. Mr. E. Bullough will read a paper on "Educational Co-operation between the Allies," and afterwards Dr. Emilio Re will speak on the teaching of English in Italy. On the second day resolutions will be adopted on the report of the Government Committee.

COUNCIL OF HUMANISTIC STUDIES.—A joint meeting of the members of the five associations represented on the Council of the Humanistic Studies (Classical, English, Geographical, Historical, and Modern Language Associations) will be held on Thursday, January 9, at 5.30 p.m., in the Theatre, Burlington Gardens, W.1, when Sir Frederic Kenyon, K.C.B., will deliver an address on "Co-operation in Educational Progress." The chair will be taken by the Right Hon. H. A. L. Fisher.

HISTORICAL ASSOCIATION.—The annual general meeting will be held at University College, Gower Street, W.C.1, on January 10 and 11. After the business meeting at 3 p.m. on the first day, Dr. R. M. Burrows will, at 5.30, deliver the annual address, taking as his subject "The Revival of Greece." On the second day, beginning at 10.30 a.m., papers will be read by Mr. J. W. Headlam-Morley on "How to set an Examination Paper in History," and by Prof. C. H. Firth on "How to Mitigate the Evil of Examinations."

SCHOLARSHIPS FOR DISCHARGED SOLDIERS AND SAILORS.—The London County Council are prepared to give sympathetic consideration to applications for financial assistance for further education from men demobilized or discharged from H. M. Forces, who are ordinarily resident in the administrative county of London (whether disabled or not). They direct special attention to the possibility of

(Continued on page 22.)

PATON'S LIST of SCHOOLS and TUTORS

An Aid to Parents in the Selection of Schools.

22nd ANNUAL EDITION NOW PREPARING.

EVERY YEAR THOUSANDS OF PARENTS
:: :: CONSULT THIS BOOK. :: ::

"I am sending you the order for the twenty-first annual issue of your great book; and may the second period on which it has entered be of as much use and help in the educational world as the first."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"You will possibly be glad to hear that a lady named _____ is sending her boy to me. In this case, she tells me, the name of the school was obtained from your List, and so, I believe, no further commission is due from me."

"When I first came here I spent over £50 in six months' advertising in the leading papers—result, **one** boy. Then I came under your Agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

"Two years ago you sent me a pupil named _____. Through her parents I have had **four** good pupils this year from four different places, and through two of these

I have **five** more coming this term: that is ten pupils from paying **one** commission."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term **four** pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

**Specimen Copy and full particulars sent free of charge to
Head Masters and Head Mistresses.**

143 CANNON STREET, LONDON, E.C.4. Telephone: Central 5053.

training to become teachers. Scholarships are to be awarded to suitable men demobilized or discharged from H.M. Forces who make application therefor. As regards students desiring to enter training colleges for teachers, the amount of grant will be such as will bring the applicant's income from scholarships to £104 a year, plus tuition and examination fees (if any); and as regards other students, the grant will be assessed according to the circumstances of each case, provided that no candidate shall receive from all sources more than £175 a year with tuition fees. Shorter courses of training for the teaching profession will be held for men demobilized or discharged from H.M. Forces, and details of such courses will be published at a later date.

SCHOOLMASTERS IN THE NAVY.—The Admiralty have drawn up a new scheme to govern the conditions of service of naval schoolmasters. Under it schoolmasters will enter with the relative rank of acting warrant officer, and may attain the relative rank of lieutenant-commander. It has been decided that the schoolmaster branch shall hold actual rank among themselves only, and that, as between themselves and other branches, they shall hold relative rank only. The titles given to the various ranks are therefore scholastic titles. The schoolmaster branch will, however, wear the uniform of officers of their respective relative ranks, with the distinctive cloth of light blue laid down for the instructor branch. The scheme affords an advance both in pay and status over that in force at the beginning of the War. Provision is made in the scheme for the transfer to the new system of existing schoolmasters who entered for continuous service before August 1914. Schoolmasters will be entered either direct from the shore or by transfer from other ratings. On entry they will be styled schoolmaster candidates and will hold the relative rank of acting warrant officer. After a further six months' service they will receive the rank of schoolmaster, seniority dating from the date of promotion to probationary schoolmaster. Schoolmasters serving in the capacity of assistant master will have the relative rank of warrant officer until the completion of twenty years' service in the grade. Schoolmasters will receive the relative rank of commissioned warrant officer after twenty years' service. Specially recommended and qualified schoolmasters who satisfactorily complete an advanced course of instruction will be eligible for specialist appointments carrying additional remuneration. Senior masters of not less than three years' service

as such will be eligible for promotion to the rank of head master. During the first eight years these officers will have the relative rank of lieutenant, after that the relative rank of lieutenant-commander. The numbers of senior masters and head masters will not exceed 25 per cent. and 8 per cent. respectively of the total number of active service officers of the schoolmaster branch. Full particulars of the scheme can be obtained from the Secretary of the Admiralty.

MUNITION WORK IN LONDON EDUCATIONAL INSTITUTIONS.—The London County Council Education Committee recently considered a report submitted in regard to the work done in London educational institutions during the past three and a-half years in the manufacture of munitions and training of munition workers. In June 1915 the Council agreed to place its resources at the disposal of the Ministry of Munitions and the Metropolitan Munitions Committee. Two lines of action were adopted: (1) the manufacture of such essential munitions as could be made with the staff and machines available in technical institutions, and (2) the training of workers for munition factories. The main efforts of the organization have been directed to the manufacture of precision gauges. About 83,000 gauges have been delivered and passed by the National Physical Laboratory. More than 12,000 students have been in training, of whom about 9,000 have completed their courses satisfactorily and been placed in employment. The staff engaged on this work on December 1, 1918, numbered in all 482 persons, 44 of whom belonged to technical institutions, 193 had been transferred from their normal posts in various kinds of schools, and 245 were temporary employes. Machinery and equipment to the amount of about £17,000 have been purchased for manufacture, and remain the property of the Council. Certain funds will be available for the reconstitution and equipment of workshops in technical institutions from the manufacturing side. Suggestions have been invited from the various principals and heads of departments who have been engaged on munitions work with a view to utilizing to the best advantage the experience gained during the past three and a-half years. The total value of the work carried out for the manufacture of munitions and the training of munition workers has been of the order of £300,000. The thanks of the Committee have been conveyed to those members of the Council's staff who have been en-

gaged during the War on work in connexion with munitions and the training of munition workers.

CAMBRIDGE LOCAL EXAMINATIONS.—The December Cambridge Local Examinations were held at 213 centres in the United Kingdom and the Colonies. There were 12,757 candidates, of whom 146 were entered for the Higher, 4,026 for the Senior, 5,271 for the Junior, and 3,314 for the Preliminary Examination. Of the Colonial Centres, 29 were in India, 6 in Ceylon, 5 in the Straits Settlements and Malay States, 8 in South and West Africa, 13 in the West Indies. There were also Centres at Belize, Bermuda, Buenos Aires, Mauritius, Monte Video, Shanghai, and Tientsin. The regulations for the examinations to be held in July and December 1919, and the set subjects for July and December 1920, may be obtained from Mr. J. H. Flather, Syndicate Buildings, Cambridge; also regulations for the new Higher School Certificate Examination to be held in July 1919 and 1920.

MODERN LANGUAGE ASSOCIATION: WEST LONDON BRANCH.—Now that the dangers of air raids and darkened streets have passed, we may expect a great revival of meetings of educational associations, which have been far less numerous during the War. The West London Branch of the Modern Language Association recommenced its activities on December 6, when a large body of members listened to a vivacious *causerie* by M. Henry D. Davray on "La France pendant la Guerre—et après." The lecturer, who is known as one of the leading spirits of the Anglo-French Society, made an earnest appeal for the permanence of the alliance between the two countries, and showed by many examples how complementary the two nations were. He warned England not to allow herself to be duped by the Prussians as she was after the Treaty of Vienna in 1815. By that treaty English lighters were to be allowed free access to the Rhine, so that coal might be brought from Newcastle straight to the ironfields of Lorraine. But, when the English merchantmen arrived off Rotterdam, the Dutch authorities had been got at by the Prussians, and said: "Oh! but this is not the mouth of the Rhine—this is the Maas. The Rhine flows into the Zuyder Zee." And, technically, they were right, for the tiny offshoot that flows north is known as the Old Rhine; but they knew that only a row-boat could float in it.

THE DECIMAL ASSOCIATION.—The report for the past year singles out, as the "event of the year," the introduction of the Decimal Coinage Bill into the House of Lords on April 24, 1918. The growth of public interest is attested by the fact that the membership of the Association has doubled since 1916. Many lectures have been delivered throughout the country, and in many cases resolutions have been passed in favour of decimal coinage and the metric system. Representations have been made to Education Authorities urging greater simplicity in the teaching of the metric system in schools. Some forty public bodies have adopted resolutions advocating decimal coinage or the metric system, or both, including the British Engineers' Association, the British Medical Association, many Chambers, the Council of the Society of Architects, the Federation of British Industries, the Institution of Electrical Engineers, the Institution of Post Office Electrical Engineers, and the Municipal Tramways Association. The Committee on the Position of Natural Science in the Educational System of Great Britain reported strongly in favour of the metric system, and members of the Chartered Institute of Secretaries voted 85 per cent. in favour of decimal coinage and the metric system. The Committee on Commercial and Industrial Policy, on the other hand, declared against both reforms. The Association has moved to new premises at 212-13 Finsbury Pavement House, Finsbury Pavement, E.C.2.

THE OPEN-AIR EDUCATION TRUST.—As we have announced already, the Uplands Association is at work on the establishment of an Open-air Education Trust. A farm of seventy acres has been secured on the southern slope of Werneth Low, at an elevation of 800 ft., amid beautiful scenery. The Uplands Summer Meeting in August last was spent at the farm. During the meeting the subscribers to the fund which made the purchase of the property possible considered the organization of the Trust, and a Committee was appointed with authority to establish the work on a permanent footing and to raise the necessary funds. An outline for Memorandum and Articles has been adopted, and the Trustees now invite further support for their scheme, and request that all inquiries and applications for forms of subscription be sent to the Hon. Financial Secretary, Mr. William Elliott, 33 Oak Road, Crumpsall, Manchester.

A NEW YEAR WISH.

To you who have some treasured happiness—
May it continue thro' the coming hours,
Increasing as the winged weeks go by,
And deep'ning with the advent of the flowers.

To you who sorrow for the dear days gone—
May the New Year a veil of beauty bring
To wrap a rosy memory o'er your grief,
So that in sadness your sad hearts may sing.

But whether you be sorrowing or gay,
May bright-eyed Hope "God-speed you" on your way.

PRIMARY SCHOOL NOTES.

A Wonderful Year.

THE world clash of arms which ceased with the advent of the season of Goodwill and Peace in 1918 has been followed by wonderful developments in English education, and the past year will always be regarded as a notable milestone in our educational history. In the first place, notwithstanding its admitted shortcomings on the technical side and the notorious lack of facilities for secondary education, the English school system has emerged with complete success from the fiery trial of a war unprecedented for intensity in the records of the world. It is possible that the spiritual values given to our sailors and soldiers by the emphasis laid upon character-training in English primary schools will be more fully realized when the physical evidences of conflict, softened by the lapse of time, fall into the framework of a clear historical perspective. The teachers of England have taken an outstanding part in the glorious triumph of the spiritual over the material ideal. Alike, the glorious dead who have fallen in the physical conflict, and the generations of teachers whose ashes rest in the peaceful churchyards of the homeland, have given their lives for the great end. That English teachers have successfully carried on the work of education during the past four and a half years is largely due to the intense conviction that it is essentially spiritual work. To this recognition of essential values may be attributed the high degree of fellowship among all grades of teachers which now exists. In the second place, the passage of the Education Act has prepared the way for a great revival in school activities and one which cannot fail to exert a vital influence upon commercial, industrial, and professional life. The Teachers' Superannuation Act, a necessary corollary of the Education Act, marks a further step in the educational progress of the year. On the administrative side, the appointment of Mr. H. A. L. Fisher as President of the Board has proved successful beyond all anticipations, and it has given grounds for the hope that other Departmental appointments will, in due course, be given to men and women who have had practical experience of schools and scholars.

The Supply of Teachers.

THE speeding up of the demobilization process promises to bring back to the schools a fair number of service teachers at an early date. On the other hand, unless Education Authorities take prompt measures to retain war-time teachers, there is every prospect that these will retire from the teaching profession as the soldiers return. In consequence, it is quite possible that the demobilization will not sensibly relieve the grave shortage of teachers. In the circumstances, therefore, it would probably prove a wise course to continue the engagements of all existing teachers, temporarily, at all events. Teachers in all grades of education have been working under very strenuous conditions throughout the war period. Classes of sixty, seventy, and eighty children under the charge of a single teacher have by no means been confined to primary schools, so that a halving of classes would prove a sound educational investment. Incidentally such an arrangement would enable returned soldiers to resume scholastic duties under favourable conditions, and any surplus staff would be readily absorbed by the reorganization of school classes which will become necessary under the terms of the new Education Act.

* * * * *

A National Scale of Salaries.

NOTWITHSTANDING the passage of the Superannuation Act, the immediate prospects of a successful introduction of the vital clauses of the new Education Act are not hopeful. The decisive factor in the situation is the question of salaries. So long as Local Authorities persist in remunerating teachers at rates which do not allow them to obtain the necessities of life, it will be impossible to secure a sufficient number of entrants to supply even the existing demands of the schools. There is a growing conviction that the position can only be saved by prompt and decisive action on the part of the Board of Education. It is quite clear that the supplementary grant has not been used for its intended purpose by several education authorities, and the Departmental Report on Teachers' Salaries has also failed to attain the desired end, inasmuch as its conclusions have not been adopted generally. The publication of illustrative scales has proved the entire undoing of the Departmental Committee's work,

T. Nos., Central 621 and 12080.

since many of the laggard education authorities have seized upon the lowest of these scales, while exploiting their own sincerity in adopting correct principles. It is now generally conceded that the laying down of minimum rates by the Board was not conducive to professional recruitment, and teachers of long experience consider that there is no prospect of attracting men to the profession unless the minimum salary for a fully trained certificated teacher is raised to £150 per annum. It is unlikely that there will be many non-graduate teachers in the future, so that this amount is quite modest; by comparison with the ordinary rates paid to competent tradesmen of similar age, it is well below the standard.

* * * * *

Combinations of Education Authorities.

A FURTHER reason for definite action by the Board in reference to the salary question lies in the combinations of Local Education Authorities for the purpose of arranging uniform scales of salaries for teachers, and it is precisely in the areas covered by such combinations that the prevailing discontent among teachers is most intense. Three points emerge from the formation of these combinations which will require very careful consideration from the Government; on one hand, while supplementary grants are being dispensed by the Board of Education which, in addition, is about to bear 60 per cent. of the cost of teachers' salaries, the uniform scales of salary referred to are apparently being arranged without reference either to the Board of Education or to the teachers concerned. Secondly, the scales are being drawn up by representatives of the Authorities, which representatives are constituting themselves as standing committees of a permanent character for the purpose of controlling teachers' salaries. As a result, all questions bearing upon teachers' salaries are being referred by individual authorities to the standing sub-committee, which requires all members of the combine to act in unison upon the particular points raised. In other words, these Education Committees are, in effect, transferring the direct financial responsibility which they have received from the rate-payers to an outside body, which has, at the best, a very slender *locus standi*. Friction of a pronounced type is certain to arise between Local Education Authorities and their teachers when points concerning their particular conditions of service are referred to a Committee which has no defined authority, and the decisions of which the constituent bodies are in no wise bound

to respect. Thirdly, since Local Education Authorities cannot yet be fully aware of their total financial resources, they are likely to err considerably in drawing up new scales, and the most astounding variations are now being perpetrated in different areas on this account. Maximum salaries of teachers possessing identical qualifications vary to the extent of 50 per cent., or more, under different authorities.

* * * * *

National Union of Teachers.

A VERY hearty vote of thanks was moved at the last meeting of the Executive to the General Secretary, Sir James H. Yoxall, for his indefatigable efforts on behalf of the superannuation of teachers. The vote will be cordially supported by every member of the Union. The General Secretary began what was for him truly a labour of love almost thirty years ago, when he prepared a scheme of contributory pensions for teachers. Although he was the only member of the Executive to support it, he continued his mission with greater application as time progressed. Few realize the burden of responsibility borne by the General Secretary in connexion with the preparation and passage of the Superannuation Act, and it was gravely increased by the uncertain Parliamentary conditions which prevailed. There can be no doubt that the anxiety incurred during this trying period imposed a considerable strain upon its sponsor's health, and it will be the earnest hope of teachers everywhere that the attainment of this great ideal will carry with it renewed health and many long and happy years. The Executive decided at the same meeting to establish a fund to augment the pensions and allowances of codal pensioners and members of the Union who retired under the Teachers' Superannuation Act of 1898 prior to 1912. Whether this generously conceived action will be supported by substantial results remains to be seen. There is undoubtedly a strong feeling that the Government is morally responsible for the care of these, its veteran servants, but in view of the prevailing poverty among teachers, it is difficult to realize that the heavy financial undertaking outlined in the terms of the resolution can be borne.

The passage of the Superannuation Act is probably responsible for the change of policy adopted by the Executive with regard to the admission of uncertificated teachers to the Union. A Special Committee has been appointed to report upon the conditions of membership for such teachers.

DUSTLESS

and HYGIENIC ROOMS.

In SCHOOLS, LABORATORIES, &c.
USE The British Made and Owned

Odourless, or Powerful Germicidal

FLORIGENE

(A Regd. Name suggested by FLOOR-HYGIENE)

Very EARLY in the CHRISTMAS VACATION.
FOR BEST RESULTS.

"Florigene" has been continuously used for many years on Wood, Concrete, and Stone floors of every description, also on Linoleum and Cork Matting in Government and Municipal Buildings, and in all kinds of Schools, and other Institutions in the United Kingdom and Colonies.

"Florigene" costs little, is easily applied by unskilled, and saves time and labour.

It is IMPORTANT TO NOTE that

ONE APPLICATION of "Florigene" ALLAYS THE DUST and DIRT for 2 to 12 months, according to traffic, not only during each sweeping (without Sprinkling of any kind) but also throughout all the intervening periods — which is of greater hygienic importance.

These sanitary, labour-saving, and economic advantages are NOT attained by sweeping-powders or any other method.

Not sticky—the ordinary daily dry sweeping alone required—Scrubbing being optional.

"Florigene" is strongly recommended by Medical and other expert authorities.

Important EXTRACTS from a Joint Report on the Medical Inspection &c. of School Children by the School Medical Officer and School Doctor of a large County Borough:—"Cleansing of Schools—Dustless Preparations as a Floor Dressing.—Bacteriological experiments were carried out in four departments. . . .

The advantages are as follows:—

- (1) Economy of labour in cleaning the room.
- (2) Prevention of the rising of dust once deposited; hence a healthier atmosphere for breathing.

The above School Medical Officer and School Doctor inform us they refer to "Florigene" (which has been applied to the floors of the County Borough Boys' and Girls' Secondary and Elementary Schools for a considerable period) and that they favour its more general adoption, especially in rooms where drill is carried out.

Other well-known Medical Authorities have also reported favourably on the "Florigene" treatment of floors.

Numerous other Testimonials can be produced.

CLASS BOOKS FOR SECONDARY SCHOOLS

Mathematics and Mechanics.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

Algebra, School. By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. 7s.

"The author has brought the work into closer touch with intelligible calculations, and, at the same time, gives a clear account of the elements of algebraic theory."—*Schoolmaster*.

Algebra, School (Matriculation Edition). By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. 5s. 6d.

"As a school text-book, this volume has much to recommend it, the examples and test-papers being carefully chosen."—*Mathematical Gazette*.

Arithmetic, Preliminary. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. With Answers, 2s. 3d.

"An excellent course of arithmetic."—*Journal of the Assistant Masters' Association*.

Arithmetic, The Junior. By R. H. CHOPE, B.A. With or without Answers. Third Edition. 3s. 6d.

"No better Arithmetic for school work has come into our hands."—*Educational News*.

Arithmetic, The School. By W. P. WORKMAN, M.A., B.Sc. With or without Answers. Second Edition. 4s. 6d.

"The best arithmetic for schools on the market."—*Mathematical Gazette*.

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc. This edition of the author's well-known *School Arithmetic* covers the Senior Local Syllabus, and is amplified by a large selection of miscellaneous examples arranged in Graduated Examination Papers. 4s.

"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World*.

Arithmetic, Rural. By A. G. RUSTON, B.A., B.Sc. 4s. 6d.

"This book supplies a real need. The presentation is clear . . . a sound piece of work."—*The Journal of Education*.

Book-Keeping, Practical Lessons in. By T. C. JACKSON, B.A., LL.B. Fourth Edition. 4s. 6d. Also in Two Parts. Part I. 2s. 9d. Part II. 2s. 9d.

"A well-arranged and well-explained treatise."—*Educational Times*.

Geometry, Preliminary. By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s. 9d.

A book for beginners containing a judicious blending of practical and theoretical work. Insists throughout on reasoning from first principles.

"The book is certainly one to be recommended."—*Preparatory Schools Review*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 4s. 6d.

Also in Two Parts—Part I (Euclid I, III 1-34, IV 1-9). 2s. 9d. Part II (Euclid II, III 35-37, IV 10-16, and VI). 2s. 9d.

"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World*.

Graphs, Matriculation. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. 1s. 6d.

"The explanations are remarkably clear."—*Secondary Education*.

Hydrostatics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. Second Edition. 2s. 9d.

"An excellent text-book."—*The Journal of Education*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. 3s. 6d.

"A practical book for this subject. It will be found exceedingly useful."—*Educational News*.

Mechanics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. Third Edition. 4s. 6d.

"A good book—clear, concise, and accurate."—*The Journal of Education*.

Chemistry, Physics, Botany, &c.

Botany, Junior. By FRANCIS CAVERS, D.Sc. 3s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Botany, Senior. By FRANCIS CAVERS, D.Sc. 5s. 6d.

"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature*.

Chemistry, Preliminary. By H. W. BAUSOR, M.A. 2s.

"The experiments are simple in character, so as to be well within the capacity of a schoolboy, and the sequence is so arranged as to illustrate fundamental ideas in a clear and logical fashion."—*Nature*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. Second Edition. 3s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. Second Edition. 5s. 6d.

"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian*.

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. 3s. 6d. Including preparations, experiments on action of heat, quantitative and qualitative analysis.

Chemical Calculations. By H. W. BAUSOR, M.A. 2s. 9d. Advanced Course. 1s. 6d.

"The calculations which are inseparable from Chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge*.

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. 2s. 9d.

"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 4s.

"The information is accurate and up to date."—*The Journal of Education*.

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc. Sixth Edition. Revised and Enlarged. 3s. 6d.

"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 3s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. 4s. 6d.

"From first to last there is an originality of treatment which makes it interesting reading."—*Nature*.

Mechanics and Physics (Mechanics, Hydrostatics, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. 2s.

"This book is intended for technical students, but it will be found very useful for pupils in ordinary secondary schools."—*Secondary Education*.

Science, Junior Experimental (Physics and Chemistry) By W. H. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 3s. 6d.

"The explanations are clear, and we can recommend the work heartily."—*Secondary Education*.

Sound and Light, Junior. By JOHN SATTERLY, D.Sc., M.A. 3s. 6d.

"Reaches a high standard, with plenty of practical work."—*Guardian*.

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 5s.

"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary physics."—*Nature*.

URGENT PROBLEMS OF EDUCATIONAL RECONSTRUCTION.

By RETA OLDHAM,

President, Association of Head Mistresses.

WRITING on behalf of girls, I believe that the most urgent problem of educational reconstruction is a proper provision of scholarships and maintenance allowance for girls, which would enable them to pass on from school to the Universities or to courses of training in art, music, domestic science, physical exercises, &c.

It is the fact that, in the last year for which statistics are available, the number of scholarships to Oxford and Cambridge offered to men was 440 and to women 34; and it is also the fact that the number of girls taking a full secondary education and preparing for the University was and remains conspicuously greater than that of boys. Since 1914 the Board of Education has instituted "advanced courses" in secondary schools, and more pupils will, through these courses, be brought to the threshold of the University only to find the gate barred to them, unless the provision of scholarships and maintenance allowances is increased. At this period of our history the trained minds of women are needed as never before both to fill the vacancies left by the men who have laid down their lives for our country and also to assist in raising the general standard of education and efficiency in the country and throughout the Empire. In the near future the calls on women will increase and multiply, and opportunities for preparation to answer these calls should multiply correspondingly.

The Association of Head Mistresses, at its Annual Conference last June, while placing on record the unanimous belief of its members that a large provision of scholarships tenable at the Universities is required, suggested that this provision might be secured by the free admission of students to the University of their choice through (a) the payment by the

State of the tuition fees of all who pass the Higher School Examination and (b) the granting by the Universities of "free places" to approved students from secondary schools. The Association advocated also a provision of maintenance grants for women students, by means of gifts and foundations. We have appealed to the public and the response has been generous, but a deplorable wastage of women's ability continues and will continue until the scholarships which girls so sorely need are supplied.

By E. R. CONWAY,
President, National Union of Teachers.

INTIMATELY connected with the problems of educational reconstruction is the problem of the housing of the people. There is little privacy and comfort in most working-class dwellings; bath-rooms are an almost unheard-of luxury; and it is wellnigh impossible to obtain any opportunity for study.

This unsatisfactory condition of things has a very bad effect on the health of mothers and children. The fact is seldom realized that inefficient household conditions make the work of the home-maker so difficult and discouraging that she is often entirely debarred from educational and social activities, and becomes prematurely worn out. Now that the value of human life is more fully recognized, the State will see that proper safeguards are taken for the protection of the health of mother and infant. The recruiting statistics have proved conclusively how great have been the evil effects of the premature employment of school children, and Sections 14 and 15 of Mr. Fisher's new Act, which prohibit the employment to some extent, will need to be at once enforced if our boys and girls are to grow up strong enough for the task which awaits them in the future.

Medical inspection and treatment should be at once provided in every school, and nursery schools should be established for all children between two and five whose attendance is necessary or desirable.

Education should be made free in all its stages, so that every child, whether poor or rich, may have equality of opportunity, and maintenance grants should be provided where necessary.

As the success of all educational systems depends upon the personality and character of the teachers employed, measures should at once be taken to improve the teaching staff of the schools, and prevent the employment of unqualified persons in them. No one should in future be allowed to teach without adequate training and a certain recognized standard of academic attainment. Mr. Fisher's Pension Act, and the improvement in salaries which is gradually taking place, will do much to attract men and women of the right type into the teaching profession, and the Board of Education must see that the backward Local Education Authorities are compelled to offer adequate remuneration.

There are still some Education Authorities which do not recognize the desirability of teacher representation. In my opinion, every Education Committee should include at least one man and one woman teacher directly elected by the teachers of the district.

It is also very desirable that all new schemes under Mr. Fisher's Act which are forwarded to the Board of Education should have been discussed and approved by a Joint Committee on which teachers and others interested are represented.

Another urgent matter is the limitation in the size of classes in the primary schools to forty pupils instead of sixty, as soon as the requisite number of teachers is available. No panacea for improved education will be successful which leaves the ordinary children to be herded together in large classes with poorly qualified teachers.

By CHARLOTTE L. LAURIE,
President of the Association of Assistant Mistresses in
Secondary Schools.

THE most pressing need as regards Educational Reconstruction is the reorganization of Education Committees. The Education Act of 1902 provided that the education com-

mittees established by Local Authorities should consist of a majority of the town or county council, and, where it seems desirable, of persons of experience in education and of persons acquainted with the needs of the various kinds of schools in the area; of women as well as of men. It is hardly too much to say that an inquiry into the personnel of the education committees of many town councils, and even of county boroughs, would in many cases reveal a very small proportion—(a) of members with any extensive or expert knowledge of education, and (b) of women.

An Act of Parliament which would insist on a certain proportion of members being elected by the teachers of the elementary and secondary schools in the area would be a great gain. In order, too, to maintain that belief in education which the War seems to have created in the nation, it is desirable to have parents represented on these committees. The schools of the country would gain immensely by a closer co-operation between administrators, teachers, and parents. It may be urged, in passing, that Directors of Education should have had some teaching experience.

Another measure that would undoubtedly raise the standard of education, especially in the smaller provincial towns, would be the compulsory registration of private schools. It surely is an anomaly in this twentieth century that any one can set up a school without the slightest inquiry into his or her qualifications. The new Act invites private schools to offer themselves for inspection, and no doubt many will do so, but some system of registration is essential in the interests of the public in the case of those private schools that are not inspected.

The War has revealed an alarming state of things as regards the physique of the nation. Undoubtedly much has been accomplished by the school medical service during the last ten years. At the same time it is disconcerting to read in Sir George Newman's last annual report that in 1917 there were still some Local Authorities which had not provided any school clinic, nor made provision for the treatment of dental defects or the supply of spectacles. It is not sufficient, however, to try to improve the physique of school children. As far back as 1904 the Physical Deterioration Committee recommended a permanent Anthropometric Survey, which, beginning with "the periodic taking of measurements of children and young persons in schools and factories," should be extended "to the population of the country at large." It is to be hoped that the Ministry of Health will at least insist on an annual medical inspection of *all* children, and will compel those Local Education Authorities that have not already done so to adopt schemes of preventive treatment. Progress in education is intimately connected with improved physique.

By S. MAXWELL,
Chairman of Council, The Private Schools Association.

THE passing of the Education Act and the School Teachers' Superannuation Act marks a definite epoch in the history of English education, and it is unfortunate that these two Acts, while in many ways beneficial to education, should impose injustice on a large body of teachers. Especially is this the case with the Superannuation Act, for it expressly excludes from its benefits all teachers in private schools, even those inspected and pronounced efficient by the Board of Education. These schools will naturally find it exceedingly difficult to get satisfactory staffs in the future, and so their efficiency must necessarily suffer.

The Board have said in the past that they have no official knowledge of private schools, but, if responsible for the education of the country, it is their duty to have knowledge, and the means to obtain it are now given by the Education Act. It is possible to have a truly national system of education in which all types of efficient schools should be represented, and such a system should be one suited to a free country and so far as possible should avoid the excessive control of a bureaucracy.

To make this possible it is necessary to change the educational unit. This at present is the school. It is the school which is "recognized," and the teachers and pupils are merely

a part of a whole. The question of any change in the nature of the State grant is too large to be entered on here, but a change of unit from the school to the teacher is easily possible, and would be a simple and much needed reform. It is the teacher, not the school, who is going to receive a pension, and it is the efficiency of the teacher, not the type of school, which should be the deciding factor as to whether a pension is granted or not. For it cannot be maintained that a teacher in an efficient school under private management is doing work of less national importance than his colleague in one that is State-aided.

By the work of the Teachers Registration Council the professional status of the teacher is being raised, and the unification of the profession is no longer a vague dream. The injustice of the present position would disappear if all registered teachers in efficient schools were treated alike, and all privileges at present enjoyed by teachers in State-aided schools were granted to all registered teachers in efficient schools.

Private schools in England will continue to exist; the present trend of affairs unfortunately tends to handicap the better schools rather than the less efficient, and this is nothing short of a national calamity. It certainly seems strange, when we have been fighting Prussian ideals for more than four years and have at last proved victorious, that those responsible for our educational system should use here exactly the same methods to stamp out private enterprise as were so successfully adopted in Germany. We have seen the evils of an all-embracing State system of education in Germany; let us at least pause and consider before we go any further on the same path in our own country.

By S. B. LUCAS,
Chairman-elect, Incorporated Association of
Assistant Masters.

PARLIAMENT has passed an Education Act. It has passed a generous measure for the superannuation of teachers. What should be done next?

In educational matters questions of administration are all-important. Therefore it matters a great deal whether the members of Education Committees are sympathetically inclined towards the highest educational ideals or not, and also whether they have the requisite knowledge to deal with the new problems that are continually arising. In the opinion of my Association it is urgently necessary that Education Committees should be strengthened by the inclusion of a much larger number of teachers. We make this demand on two grounds: in the first place, because we are confident that there exists among members of our profession a large amount of administrative ability that might be utilized in securing greater educational efficiency; and in the second place, because we desire to have a greater share in determining the conditions under which education is given. We think, too, that Consultative Committees should be set up in each area controlled by a Local Education Authority. It would be well if these committees had the right of nominating certain members of the Education Committee.

It is evident that a national scale of salaries for teachers cannot be much longer delayed. It will be the natural and inevitable outcome of the national system of pensions. Every teacher should be assured, once he has passed satisfactorily a period of probation, of rising to a maximum not lower than a fixed amount which must be made compulsory throughout the country. This minimum maximum, if I may use the expression, should be adequate. It should not be lower than the maximum of the illustrative scale set forth in the report of the Departmental Committee. At present, of course, the figures require an addition to cover the increased cost of living, and they will always need to be supplemented by an additional allowance in London and other places where the cost of living is above the average. Further, in all such improvements the existing teachers should not be treated less fairly than new entrants to the profession. They should be placed as soon as possible at a position on the scale conforming with their years of service. What can be more repelling to a would-be teacher

than to realize that old and tried servants are treated far less generously than new-comers? This has been the deplorable practice of many Authorities in recent years.

The Pensions Act, generous as it is, needs an amendment for the purpose of ensuring that all service in schools recognized as efficient by the Board of Education shall count as pensionable service.

The question of tenure, too, must receive early attention. It is against all ideas of justice that there should be no right of appeal from notice of dismissal. Every teacher should be able, in such circumstances, to state his case, with proper assistance, before his employers; and, if a satisfactory settlement cannot be achieved by this means, the further right of appeal to an impartial authority should be granted.

These three demands—a national scale of salaries, security of tenure, and representation on Education Committees, must be satisfied if an adequate supply of teachers is to be forthcoming. And without an adequate supply of teachers all attempted reforms will fail. It is, further, a pressing necessity to reduce the size of classes in the primary schools from sixty to thirty or even twenty-five pupils, but at present there are not enough teachers to enable this to be done. This is one of the reforms that will tend to remove the false and undesirable distinction between primary and secondary education. It must be made possible for teachers to pass from primary to secondary schools, and *vice versa*. The petty jealousies between primary and secondary teachers must be got rid of, and this can only be done by recognizing that all teachers are members of one great profession.

EDUCATIONAL RECONSTRUCTION AND THE CURRICULUM.

By T. K. M. BOOTH and T. S. USHERWOOD.

[. . . The fatal consequence of these educational methods was that it was considered no shame that a man should leave his University not only ignorant of modern languages and science, but also unprovided with any economic or commercial training that could be of value to him in practical life. . . . This example has been followed by other classes of the community, . . . and thus much of the best material that England produces has been sent to its work in life without any special preparation for the task before it.—The Right Hon. LORD MOULTON.]

RECENT reports on the various subjects of the curriculum and essays on education in its broader aspects alike show that the time is now ripe for reform either in the means of culture themselves, in the method of their presentation, or in the balance of studies. On all sides there is an accumulation of evidence that education has, to some extent, missed its aim. It has not, it is urged, developed the desire for knowledge. The average boy leaves school not only without this desire, but with the idea that his education is now complete; while the scholar (*i.e.* the scholarship candidate) has in most cases confined his mental activities to the narrow groove in which his training has developed. It is said, too, that teachers have neglected to develop the critical faculty; that our pupils tend to rely unduly on authority, that they do not sufficiently realize the importance of independent thought and active research. In effect we have, perhaps unconsciously, made our pupils conform to type rather than concentrated on the development of separate individualities.

Critics of the scholarship system have pointed out, and it must be confessed with some truth, that too little consideration has been given to the average boy—although the vigour of our national life depends more on the intelligence of the average man than on him of special ability. Other critics say that, in spite of what has been done already, there is still not enough real correlation; that each branch of study is kept in its own watertight compartment and that there is, in consequence, much overlapping and great waste of educational effort; that

this is possibly due to the influence of the specialist teacher who thinks too much of his own subject and not enough of co-operation with his colleagues. Linked with these is the charge that we have subordinated the individual, and consequently the race, either to the material or to the method: the specialist is accused of concentrating on his own subject even to the point of excluding others, arguing that it is desirable to do so since the pupil has so readily responded to its stimulus and forgetting that the average intelligent boy will, if pressed, respond to the stimulus of any well taught subject.

Few schools have been so fortunate as to have been able to initiate changes in the last four or five years; but, on the other hand, there is a more vivid realization of the necessity for reform. The expansion, enrichment, and general modification of old ideals by modern views of industry, nationality, and science point to the necessity for economizing time in order that essentials may be retained, and thus a new and heartier welcome to the principle of co-ordination is assured. Subjects and aspects of study which possibly retain a place in the curriculum by sheer inertia, must show themselves worthier than others clamouring for admission or yield place: for we are prepared to experiment and concentrate on any subject or method which is adapted to the ages and capacities of our pupils and which has a specific value in life. Vocationalism, liberally interpreted and seen truly, is no longer anathema, since education must prepare for the business of life as well as for the rational employment of leisure. We must realize that during this and possibly the next generation there will be urgent demands for the boy of constructive mind, scientific training, keen social sense, and tolerant views, and that this will necessitate vocational training coupled with a broad educational outlook.

In the circumstances, reconstruction means more than merely a recasting of the time-table. It means a readjustment of our aims. We must ask ourselves what we really wish to produce, looking further ahead than the age at which the boy leaves school—when he is, in every case, a most unfinished product: in fact, the more we can make him realize that he is unfinished, the better in one sense shall we have succeeded. Following this certainty in our own minds as to our ultimate aim, we may reconstruct the curriculum provided we remember that, if we take the word literally, reconstruction does not mean adding a prop here and there to a jerry-built house, but the rebuilding of a new educational structure on a solid foundation. In how many cases have we not arrived at grotesque results by our system of constructing convenient "modern" annexes to a building either overcrowded or out of date?

To achieve a desirable unity in place of the present discord and confusion we must recognize that the sources and instruments of culture which serve adequately to develop the individuality, form, in the words of Mr. Benchara Branford, a trinity—no unit of which ought, throughout school life at any rate, to be allowed to function to the exclusion or even at the expense of the others. Languages, the artistic arts and crafts, and the study of nature, "the inexhaustible environment of man," are equally important. Scholars must learn something of humanity itself, something of its occupations, and something of its environment throughout their early school days, if only in order that we may discover the stimulus to which they most readily respond. Later, we may allow partial specialization in, or rather a concentration on, that branch of culture which has proved most valuable in their development, but not to the exclusion of the other branches except in the rarest instances. When some measure of appreciation for the three aspects of the trinity of cultures has been acquired, when their many points of contact and their inexhaustible content have been realized, the character and type of each pupil will be the best guides as to the direction in which he may concentrate his efforts so that he may become most valuable to the community while developing his own individuality. (We may note here that the growth of desire for knowledge and the development of the critical faculty are as much dependent on the method as on the matter of study, and that probably the inquisitive line of approach is the most fruitful.)

It would appear, then, desirable to divide each school—that is, each secondary or public school—into two parts, a junior and a senior. In the former there should be a common curriculum, embracing languages, the artistic arts and crafts, and the natural sciences. In the latter there should be alternative curricula with a definite bias in one or other of these three main directions. In no case, however, should the curriculum be treated as a bundle of separate subjects, as is so often the case in reality, even where there is a conscious attempt at co-ordination: the school course is a unity which aims at the complete and "harmonious development of all the powers of the pupil." In practice, the age at which partial specialization should be encouraged is governed by the conditions that no aspect of the trinity of cultures should be neglected, and that the development of each should reach some definite stage fixed by common agreement of the staff, though possibly varying from school to school, or even from time to time. (Note, incidentally, that this and the whole problem of adequate and real correlation point to the fundamental importance of regular and frequent staff meetings. Possibly the greatest opportunity for the organizer occurs in out-of-school work. The training in English, which in the future is certain to be the foundation of our educational system, must, in part at least, take the form of expression by the pupils of their own activities. There will be a considerable saving of time and a further step in the direction of unity if the description of practical work done in school is criticized, and marked, from the two points of view.)

Now, the correlated development of brain and hand due to "art and craft" work is continuous throughout early life, but, save in the case of exceptional pupils for whom due allowance must be made, is fairly complete by the age of fourteen and a-half or fifteen; so it appears reasonable and desirable to recognize an "age of choice" at about fourteen and a-half. By such a plan we avoid the evils of over-early specialization, and we allow for the natural inclinations, since at fifteen the average boy has usually some idea of his future calling, has generally exhibited some preferences, or shown talent in one direction or the other. In the junior school all boys should confine their studies to such subjects as, in Dr. Weildon's phrase, "constitute the permanent basis of education in all secondary schools," although his list (Brit. Assoc. Address, 1911) reveals the influence of a somewhat one-sided outlook, in that a disproportionate share of time is allotted to languages and "craftwork" does not appear. If languages, the arts and crafts, and science work are equally valuable, the available time must be divided into three *approximately* equal parts and one allotted to each; but in this allotment attention must be paid to the content of each branch, its educational worth, and the stage it has reached in its evolution. While languages and science work are of old standing and approved value, the artistic arts and crafts are new comers and have barely passed the utilitarian stage, so that for the present the approximation is very rough. For very little boys it is arguable that school work should centre about an occupation, and handwork ought undoubtedly to bulk larger; but there is obviously no reason for a hard-and-fast division of the time throughout the junior school. Assuming the working week to contain twenty-six hours or, what is probably more convenient, thirty-two periods (six in each of four days and four on each of the two half-holidays), it is suggested that thirteen periods should be devoted to the language group of studies, which, with reading, writing, literature, and the minimum of formal grammar, should include history and religious knowledge; six periods to the artistic arts and crafts, including handwork of all kinds, drawing, colour work, modelling, &c.; twelve periods to science work, including geography and that "basal science of sciences," mathematics; and the remaining period to music.

With the general principle of the suggested rough apportionment of periods there will doubtless be some agreement, but opinions will certainly diverge when subdivisions of the main elements are considered. What languages should be studied? What science or sciences? What shall be the first "foreign" language and how many periods per week does its presentation demand? How many of the twelve periods allotted to science work must be devoted to mathematics? Should

the study of any "subject" be continuous throughout school life, or may it be shelved temporarily and resumed after an interval? Such questions are controversial, but attention to the following points may help towards their solution.

First, in but few schools has "English" received satisfactory treatment. As has been said, English must be the foundation of work throughout the school and must consequently have a far more liberal share of the available time than in the past. While emphasis is laid on its linguistic aspect in the lowest forms and on its literary aspect in the middle forms, it should become a real inspiration for every kind of specialist in the upper school. On lines of the development of individual appreciation, science work itself may be illuminated by the humanistic appeal and there is apparently no valid reason why "English" should not come to connote all that "classics" has in the past. Humanism is the ideal at which we all aim; not industrialism, commercialism, materialism, or any other sectional "ism."

Secondly, at least one period daily is advisable when a "foreign" language is first studied—although this principle may need modification when "language" as opposed to "languages" is the subject with which we are dealing.

Thirdly, a minimum of two periods per week is desirable for the development of any subject.

Fourthly, while no branch of knowledge is narrow and unconnected with any other, certain subjects offer a richer field than others to the teacher who is alert to make his pupils realize the extent and unity of knowledge and are thus more valuable as co-ordinating agents. In art work, for example, the most important thing still is learning to draw. But the application of that knowledge to craft work and design, and the cultivation of good taste by means of lectures on historic styles illustrated from buildings, painting, sculpture, and industrial art, are logical extensions, so that art work is definitely part of the school curriculum and is closely interwoven with literature, languages, and science.

Again, consideration of the occupations and environment of man involving natural science, geography, craftwork, &c., will give rise to problems which can only be solved economically through the medium of mathematics. Consequently, in the lower forms of the junior school mathematics should be incidental, should be subsidiary to and arise from science, geography, handwork, &c. When, however, the necessity for the logical treatment of mathematics is felt, the time devoted to it formally may and should be extended and, in all probability, in the upper forms of the junior school it will be found advisable to apportion six periods to mathematics, two to geography, and four to experimental natural science. This points to the closest and most sympathetic co-operation between the mathematical specialist on the one hand and the teachers of craftwork, science, and geography on the other. Possibly the desirable spirit in which to approach such problems of organization is illustrated by Mr. Benchara Branford's saying: "Every central truth should arise in response to some demand springing from a problem involving manual as well as mental dexterity." That subject will take precedence which at once interests and stimulates the imagination, disciplines the mind, and prepares for life—which is, in short, of real educational merit.

From what has gone before, it will be seen that the call for reconstruction, the renaissance of education, for the time being at any rate, is most urgent in the junior school. It is impossible to deal adequately with the curricula of the senior school in the space at our disposal, but the general lines of their development should follow naturally. One thing, however, is important. Whatever "sides" there may be, each should be regarded as equally important in the educational system. In far too many cases where there have been "sides" in the past, one has been regarded as a convenient dump for scholars of less than average intelligence. Schools should be laboratories of the applied science of education and in each there is scope for many experiments: the finished product should be pupils of whom it may truly be said that "each body has its own hygiene, each mind its own renaissance, and each soul its own reformation."

CORRESPONDENCE.

DETERMINATION OF THE VALUE OF g .

To the Editors of *The Journal of Education and School World*.

SIRS,—In common, I believe, with many other teachers of mechanics, I have long felt the need of some simple apparatus to find the time of fall of a body. The swinging rod and falling bullet is extremely limited in range; Atwood is indirect and complicated, often giving quite unsatisfactory results; the water-clock method at the best is messy; and the pendulum is accurate but is indirect, and involves mathematical reasoning beyond the range of a beginner. Apparatus which I have recently designed seems to be free from these defects, and I therefore hope that a description of it may be of interest to your readers.

FIG. 1.

A ball, B , is held in a clip by an electromagnet. In its fall it strikes a platform, p , which is movable up and down on a vertical standard. The impact breaks momentarily an electric contact.

Mounted on a separate stand is a pendulum, adjustable in period. As long as the pendulum is on the left-hand side, it makes electric contact; but, immediately it passes the mean position, it breaks this contact and remakes it on its return. The break of this contact liberates the ball from the electromagnet, so that it begins to fall at the instant the pendulum

passes from left to right. The diagram (Fig. 2) shows the electrical connexions. The current from the pole C of a

FIG. 2.

battery passes first through a bell (*b*), the hammer of which it holds up against a spring; it then divides into two arcs, *xx* and *yy*, which join up again at the other pole, *x*. In the first arc (*xx*) are inserted the pendulum contact and the electro-magnet; in the second (*yy*) is the platform, *p*. A current will therefore flow through the bell unless *both* these arcs are broken simultaneously.

To carry out an experiment the pendulum is held to the left by a catch and the ball placed in the clip. When the pendulum is freed, it releases the ball in passing the zero position. If the ball hits the platform *p* before the pendulum returns to this position, then both the arcs are broken at the same time and the bell hammer is released; but, if it hits *after* the return, then the arc *xx* is remade before *yy* is broken, and the bell does not ring. The ringing (silence) of the bell is therefore an indication that the half period of the pendulum is greater (less) than the time of fall of the ball; the platform can then be lowered (raised) and the operation repeated until a place is found such that the half period of the pendulum exactly coincides with the time of fall.

A series of readings is easily obtained; the results should be accurate to a few thousandths of a second. The tabulated results and graph need no explanation.

THE BALANCE OF SALARIES IN SECONDARY SCHOOLS.

To the Editors of *The Journal of Education and School World*.

SIRS.—When one reviews the course of events in the industrial world during the last four years one cannot help feeling that much of the present labour unrest is due to the fact that authorities have thought only of supplying the need of the moment, and have shut their eyes to the far-reaching results of their actions and to the injustice that might spring from them. "Munitions of war must be obtained at once; therefore let us induce men to become makers of munitions by offering exceptionally high wages, and for the time being let us forget the existence of all other workmen." Such has been the War policy throughout. "Diseases desperate grown by desperate remedies must be relieved or not at all." So perhaps this short-sighted policy has been unavoidable in these times of strain and stress, when any delay will assuredly lead to defeat and to the unnecessary loss of precious lives. But when one sees a similar policy applied to the affairs of the educational world, "it cannot but make the judicious grieve."

Without attempting to push the parallel too far, let us look at the matter a little more in detail. A need has arisen for finding suitable employment for well qualified teachers who do not wish to become Heads of schools, and to meet this need some permanent official in the purlieus of Whitehall has evolved the ingenious scheme of the "advanced course" for promising pupils between sixteen and eighteen in secondary schools, and the decree has gone forth that for such work quite exceptionally high salaries are to be offered. For some reason best known to themselves, just possibly to balance this extra expenditure, educational bodies have felt a need to reduce the salaries of future Heads of schools, so as to make them about equal to those of the teachers taking advanced courses, and have not hesitated to put their plan into action. At the same time, to induce unwilling juniors to enter the teaching profession, exceptionally high initial salaries are being offered to young teachers fresh from the University or the training college. To the vast body of well qualified teachers precluded from taking an advanced course by the nature of their subject or of their work, and who for many years "have been bearing the burden and heat of the day," practically no thought has been given.

All this, to take an extreme case, may lead to the following anomalous result in a large secondary girls' school, in which perhaps before the War the scale of salaries was not very high.

1. There will be a newly appointed head mistress who naturally will be responsible for the work of her staff and of the whole school, who will have to spend a large part of her holidays on school work, and, if she happens to be working under an arbitrary central authority, "will," to quote the words of a head master in a similar position, "have a dog's life of it very often."

2. There will be a special staff of mistresses for the advanced course. These mistresses will spend the greater part of their time on the perhaps arduous, but extremely congenial, work of teaching their own special subjects to classes of ten to fifteen picked pupils. They will, on the plea of heavy preparation, be given light timetables, and be spared much spade-work in the rest of the school. Their sphere of influence must necessarily be limited, and it may happen that their course will be only relatively and not actually "advanced." Yet these mistresses will be receiving salaries equal to or little less than that of the head mistress.

3. There will be specialists in subjects not included in the advanced course. Such mistresses will either be doing work as advanced as that of the special staff in their own subjects, or, if this be denied them, will be longing to do so.

4. There will be the mistresses whose work affects the general organization of the school, such as the second mistress and the heads of the various departments into which it is so often necessary to divide large schools. Such mistresses will influence for good or ill numbers of lives, and therefore their work will entail almost as much responsibility as, and possibly need more tact than, that of the head mistress herself. Yet these mistresses and the specialists mentioned above, whose qualifications will not in all probability be inferior to those of the special staff, will be receiving salaries of £60, £70, £80, or even £100 less than those of the mistresses working on the advanced course.

5. There will be the junior mistresses, many of whom will be raw youngsters straight from college who, with the best intentions in the world, will very often gain their experience at the expense of their pupils, and whose work will have to be supervised by the senior mistresses. And yet such mistresses will be receiving salaries only £20 or £30 less than those of the seniors who help them.

The injustice of the whole scheme needs no comment, and the fact that the injustice is merely a temporary and certainly an unintentional one does not make it in practice the easier to bear.

No one would be so small-minded as to wish to reduce the salaries of the special staff or of the junior mistresses, but one does

feel that something ought to be done by educational bodies to raise the salaries of specialists who have no opportunity of taking an advanced course in their subjects, and of those mistresses who help to make the advanced course possible or whose work is of special value in the organization of the school, so that there should be more difference between the salary of an experienced teacher and that of a raw junior, and less between that of a responsible and well qualified mistress and that of her more highly favoured colleague on the special staff.

Anyone who has any sympathetic knowledge of a school staff knows that, underlying much that is mean, selfish, and unkind, there is almost always present a genuine love of the work for its own sake, coupled with a strong sense of abstract justice. As one knows that an appeal to this principle of justice rarely fails to bring out the best in us, so one fears that any violation of it may bring out the worst, and that that horrid spirit of commercialism which connects work and pay may creep insidiously into our ranks and taint what, with all its shortcomings, has up to the present been perhaps the most disinterested of all the professions.

A. E. LLOYD.

TRAINING OF CONTINUATION SCHOOL TEACHERS.

To the Editors of The Journal of Education and School World.

SIRS,—From the many interesting and valuable discussions which have taken place in regard to the nature and scope of the continuation class teaching to be provided under Clause 10 of the Education Bill, the point has definitely emerged that some modifications in the ordinary systems of training will be advisable in the case of the teachers for this purpose. This is not to question the truth that there are certain principles based on the nature of the growing intelligence which hold good universally for the educational development of the young mind. But since the intelligence is an inseparable activity of the whole being, with its physical and emotional aspects, the methods based on these principles require some modifications in the case of certain groups of students. Above all does this seem unquestionable when we are dealing with those young workers who might be described as children of two stages of civilization, placed under two kinds of law. They obey the law of a ruder society in their entrance upon the struggle for life at a stage when they are still in the workshop of Nature, incomplete physically, emotionally, mentally, and unprepared for that struggle. We apply to them the law of a more refined civilization when we insist that there should be added to the robust and more violent forces which are inevitably shaping or deforming them some influences of a training the nature and standards of which have been framed for persons still sheltered from these forces.

Various educational bodies and experts appear accordingly to have been devoting their attention to the devising of new schemes of training for the teachers of the juvenile industrial workers, one leading idea of which will be the necessity of some study of the social and industrial conditions affecting these prospective students, and the outlook and mental tendencies determined by their life and work. It seems, however, improbable that schemes on a sufficiently large scale will be instituted in time to provide more than a very small proportion of the teachers who will be required at the outset with the special qualifications which appear most desirable.

The Women's University and Social Settlements of London have been giving much thought to those aspects of the question of training on which—on account of the union of social and educational aims in their own work, and their experience of the realities of the young industrial workers' lives—they feel qualified to speak. They hope to co-operate with educational bodies in a definite one-year scheme of training to be established as soon as possible. In this co-operation they believe that an important part of the settlement contribution will be the opportunity given by residence of familiarity with a certain atmosphere created by interchange of thought and experience amongst social workers, and experience of friendly relations with working people.

In the meantime, and in view of the more urgent need, they would be glad to make known through your columns that if any students already qualified in some respects—as, for instance, by training and experience of teaching—would like to undertake a further special preparation for continuation school teaching during the next six months, they are prepared to receive a certain number in January, and to arrange for them some practical experience of social conditions, and teaching and observation of teaching in Clubs, Play Centres, classes of a W.E.A. nature, &c. Students will also have the opportunity of attending such lectures at colleges as may fit with their needs.

It cannot surely be doubted that the task of introducing educational influences into the lives of working boys and girls, helping to liberalize their outlook upon life and strengthen their minds for its demands,

will make a strong appeal to those who are seeking for their energies some high emprise worthy of these days. National existence has been saved, but, to maintain it at a high level and to raise it to a higher, we must labour to set free the spiritual powers of our youth who must give their best in peace as their fathers and elder brothers have given in war, if we are to "build Jerusalem in England's green and pleasant land."

The Settlements at present concerned are as follows:—The Women's University, Lady Margaret Hall, St. Hilda's, East Canning Town, Talbot House, United Girls' School, Creighton House, Bermondsey (Women's House), Presbyterian Settlement, St. Helen's House (Stratford), and Passmore Edwards. Those who would like to follow the suggestions of this letter should write to the Warden of one of these. Further particulars may be obtained from your correspondent, the Warden of the Passmore Edwards Settlement, Tavistock Place, W.C. 1.—I am, Sirs, yours faithfully,

HILDA D. OAKELEY.

THE STATE BONUS AND EDUCATION.

To the Editors of The Journal of Education and School World.

SIRS,—A good deal has been said of the responsibility of men in maintaining their families, and it is, at all events, clear that the penalty of equal pay, regardless of family responsibilities, falls heavily on the growing generation, and hence on the future community. The State Bonus scheme is a suggestion whereby this evil could be much reduced, whilst it has many important industrial effects which are outside the scope of your paper, except in so far as any improvement in the prosperity of the nation makes us more willing to listen to the demands of all the various sides of the educational problem.

Put briefly, the State bonus involves the setting up of a central pool into which everyone would contribute one-fifth of his or her income; from this pool everyone would receive an equal share, probably in the form of a weekly allowance, estimated at 9s. per week current value, but rising automatically with prices or with increasing national production.

The advantage to the family man is clear, since he contributes the same as the single man or woman, but receives an amount back which is strictly proportionate to his responsibilities. In the case of a man earning say £5 a week, he would pay in £1 and receive 9s. per head, or in the case of an average family of five, 45s. per week.

This would have four important and direct influences on education: first, it would make for better nutrition of the child; secondly, it would enable the thoughtful parent (and we have been astounded to find how many these are) to keep his children longer at school; thirdly, it would make it possible for children to devote more time and thought to evening work after leaving school, since the great economic pressure driving them into industry would be relieved; fourthly, it would remove some of that harrowing dread at the back of the minds of many teachers, that they or their children may be forced into degrading poverty or dependence on "charity." Hitherto it has been considered fair only to help those who prove their need publicly; this scheme proposes to help all alike.—Yours, &c.,

DENNIS MILNER.

Victoria Street, London, S.W. 1.

As we go to press, the following results of elections of University representatives in Parliament are announced:—*Cambridge University*, Mr. J. F. P. Rawlinson and Sir Joseph Larmor; *Dublin University*, Mr. A. W. Samuels and Sir Robert Woods; *University of Wales*, Mr. J. Herbert Lewis; *University of London*, Sir Philip Magnus; *Combined English Universities*, Mr. H. A. L. Fisher and Sir Martin Conway; *National University of Ireland*, Mr. John MacNeill; *Queen's University, Belfast*, Sir William Whitla.

THE Education Committee of the Navy League has decided to create a series of bursaries for the benefit of dependents of officers and men of the Royal Navy, Royal Marines, and Naval Auxiliary Forces, tenable at preparatory, public, and secondary schools, universities and technical colleges, or other places of special training. The number of bursaries will be limited only by the amount of the funds at the disposal of the Committee, which will not in the current year exceed £5,000. The award of the bursary will be for two years, but may be continued from year to year until the course of training is completed, subject to periodical satisfactory reports on the progress of the holder.

FOREIGN AND DOMINION NOTES.

FRANCE.

Boys and girls of fourteen were crowding St. James's Park. We supposed they were waiting for Mr. Fisher to announce that the to be appointed day had been appointed, so that they might write their demands for admission to a continuation school. A veteran warrior informed us, however, that they had only come to see the guns. And indeed the proposals in Section 10 of the Education Act are of so remote and contingent a character as to have caused little excitement hitherto either in young or old. At Paris, as in London, the chief concern of the children has been to see the guns. The French child in general is in a mood of exaltation. A sketch by M. Lucien Métivet in *L'Ecole et la Vie* (II, 9) exhibits a *Confédération Générale des Gosses* marching with banners on which their demands are inscribed: "Nous voulons des terrains de jeu," "Des balles et des ballons," "Des danses, chansons, courses," "Des haltères, des disques," and so forth. In the war zone the children show those quaint souvenirs, the gas masks with which they lately trotted to school. The War has left them all, moreover, a new gallery of heroes—the boys who died for France. Notable among these is Jean-Corentin Carré, styled *le Petit Poilu du Faouet*, who enlisted as a volunteer at the age of fifteen, was decorated with the *croix de guerre* at sixteen, promoted *adjudant* at seventeen, and at eighteen fell in an unequal combat with three German airmen. Pride as well as joy fills the heart of the child of the hour in France.

The *Revue Universitaire* (xxvii, 9) gives the foremost place to an article by M. Joliet, of the Lycée de Bar-le-Duc, headed "Les deux Ecoles." These schools are schools of opinion; the first consists of those who advocate for the recruiting of *lycée* and *collège* a system of strict selection, exercised at entrance and eliminatory from class to class; and the second of those who approve the large indulgence of the existing *régime*. M. Joliet is for selection. He combats the arguments against it, and he finds the obstacles to it to be insufficiency in the number of *bourses* and the attitude, hostile or indifferent, of primary teachers to secondary education. Let us be comparative to be instructive. The *lycée* is weakened by the presence of unsuitable elements; the English secondary school often harbours children who would be deemed abnormal if their parents were not rich. The remedy for France and for England is merciless exclusion of the unfit. The *lycée*, owing to its sanctions, keeps its pupils, on an average, longer than the English secondary school. Obligatory Continuation—the demand for which must not slacken, for we are not children to be fed with the foolishness of Section 10—would give to the English headmaster the sanction that he requires; for premature departure from the secondary school would involve attendance of a continuation school. The *lycée*, as M. Joliet insists, should be fed liberally with the best products of the primary school. So should the English secondary school. Our Education Act contemplates (2, 1, c) co-operative action with respect to "the preparation of children for further education in schools other than elementary, and their transference at suitable ages to such schools." It is good; but what is a suitable age? We observe that in France children provided with the *Certificat d'études primaires* may now join the class "Sixième A" of a *lycée* at the age of twelve or even a little earlier. Smoothness of transference is as important as abundance of free places. And as to these free places—*Freistellen*, *bourses*, scholarships, call them what you will—all writers point out (and some complain) that the parent is free to refuse them. Whilst that is so, on him depends the measure in which the secondary school can be recruited from the primary.

For a reform of secondary education in England it is not enough that teachers should be pensioned and better paid. The population of the secondary school should be more homogeneous and permanent. Close the gates to the blockhead! Out with the *cancres bien nippés*, the finely bedizened dullards! We shall be told that neither for selection nor elimination is the judgment of "dogmatic gerund-grinders" wholly trustworthy; that often their swans prove geese, their geese swans. No human judgment is infallible; we advance in all fields by using the best judgment that is to be obtained. The collective verdict of trained and experienced teachers will seldom be wrong; and the process that serves to extract the best material from the primary school might surely be relied on to keep the secondary school clean of the worst. Nor are the rejected to be flung into a limbo of darkness and neglect. Where they will be provided for, we need not say again. They will help to enrich the nation so soon as we offer them a lathe instead of a Latin grammar, a dung-

fork instead of a dictionary, and draw them from the listless contemplation of unserviceable books to high practical endeavour. For the choicer elements that remain there can be devised—since all will be found to the end of the course—a secondary education more rich and complete than any that the past has known.

UNITED STATES.

The interesting Lincoln School of Teachers College, New York, experimental in purpose, offers neither Greek nor Latin to its pupils, incurring by this omission the Olympian wrath of Prof. Shorey (*Education*, Boston, xxxviii, 9). But in the teaching of English at the school an effort is made to present some view of ancient civilization and the beauties of classical literature. What is the general attitude of the United States towards classical studies in the school? Greek is obsolescent; the position of Latin is being attacked. The latest assault is that delivered by Dr. David Snedden, whose name is a name of much weight, in an article, vigorous, eloquent, and full of high suggestion, contributed to the *School Review* (xxvi, 8). He would throw off the grip of the dead hand of Latin because, "in the first place, the insistently repeated allegations as to the educational values of Latin as now taught are, in fact, without demonstrated validity; and, in the second place, Latin, as an artificially protected study, stands as one pronounced barrier to the development of truly effective liberal education suited to the genius of the American people and to the needs of a twentieth century democracy." If the Americans, he says, are to fulfil their destiny, they must cease to worship the past; they must cultivate originality; they must seek out in every possible way the inventive spirit among them and give to it endless varieties of encouragement and positive incentive. Having learned the possibilities of controlled evolution, they must look for new aims and methods to educators well grounded in psychology and sociology. Experimental schools should be multiplied, and there should be given to them the freest possible scope to develop and test new and varied objectives and the means of reaching them.

Dr. Snedden would not banish the classics altogether; for those with genuine interests in such studies, every facility to pursue them should be afforded in the schools and colleges that can obtain enough students to justify the expense. But the great instruments on which he would rely in secondary education would be the English language and English literature, the social sciences, natural science (with new objectives and new methods), and the fine arts. We report him objectively, without the distraction of a commentary. The paragraph in which he deals with the future relations of vocational and liberal education in the United States deserves to be quoted in full. "Fortunately, we now see that we cannot effectively 'vocalize' education by offering in a high school or college a few elective studies, or courses of an academic nature, with a slight accompaniment of laboratory illustration or practice. We have been attempting this in numberless cases with agricultural, industrial, and commercial education—and even with home economics, journalism, business administration, teaching and social work. Only recently have we been coming to perceive the great wastefulness and futility of it all. We are certainly destined soon to have a system of vocational schools, the vestibuled approaches to the thousands of vocations now found in civilized society, but these schools will be as definitely differentiated from schools of general education as are now colleges of law, medicine, dentistry, and military leadership. We may expect then that the functions properly belonging to schools not vocational in purpose will be revealed more clearly. With this knowledge, we can proceed to devise the most effective general or liberalizing education for those thousands who must or will close their general school in their fourteenth or fifteenth year; for those other thousands, more fortunately situated, who can give from one to four precious years to the liberal education offered by the secondary school before embarking on the study or practice of a specific vocation; and also for that minority, usually combining much native ability with fortunate home conditions, who aspire to a 'college degree' before taking up the study of a profession. Here lie our opportunities to differentiate the ends and to determine the means of genuine liberal education."

INDIA.

There has been published an important circular letter from the Government of India to Local Governments and Administrations on the subject of boys' elementary education. The letter states that, in 1913, the Government of India expressed its

desire to see the number of boys' schools and pupils doubled in the near future. Some progress was made, but the War checked the full realization of the programme. Aware that a keen demand existed for a more rapid carrying out of its declared policy—in particular by means of compulsory education—the Imperial Government, nevertheless, thought that compulsion in scattered local areas would not spread education among the lowest and most backward classes, and might lead to a neglect of these for the sake of those more ready to accept compulsion. A fairly uniform general spread of elementary schools would be better effected not by general compulsion, which the Government thought impracticable, but by general compulsion of local bodies to provide facilities to carry out the plan of 1913. Accordingly, in 1917, it evolved a scheme to double the number of pupils in boys' schools in ten years and to divide the additional expenditure equally between the Imperial and Provincial Governments and local bodies—local bodies being compelled to provide and maintain the requisite facilities—and empowered them to raise the necessary funds by taxation, whilst the cost of additional trained teachers and inspecting staff was to be met by the Imperial and Provincial Governments. The discussion on the constitutional reforms and proposed grant of administrative and financial devolution and of enlarged powers to local bodies rendered it impossible to proceed with this scheme, but the Government of India, says the Circular, now deprecates further postponement of action. It lays its proposals of 1917 before Local Governments and directs their attention to the opportunities that will be afforded them by the large powers to be given to local bodies and Legislative Councils; also to the incentive to extend education supplied by the expansion of the franchise, and to the fact that, if Local Governments will now have to finance such extension themselves, they will have much larger resources. It recognizes that the rate of progress is bound to vary in different provinces, and that a uniform system need not be adopted. Accordingly it calls on Local Governments to formulate for themselves schemes which may lead to the attainment of the objective of 1913.

"In India," writes the editor of the *Mysore University Magazine* (II, 5), "we scarcely know what vocational education means." Young Indians flock to examinations; those who fail are discontented,

Education—
to what?

and those who succeed must often swell the number of "unemployed literates" who form a problem or a danger for the State. The existence of this intellectual proletariat is deplored in the Report on Indian Constitutional Reforms (Par. 182). We remark incidentally that Egypt is also yielding its crop of baffled scribes; for at the last Secondary Certificate Examinations 65 per cent. of the candidates in the Higher Division failed and 81 per cent. in the Lower. In India the cry is "Still they come!" At the first B.A. Examination in Mysore University, for example, of seventy-six candidates only forty were successful; whilst of 407 who presented themselves for the Entrance Examination 269 failed! Even those who have graduated will find that the Bachelor's degree is no more a key to riches in India than in England.

The Montagu-Chelmsford Report just cited indicates as a grievance of India the lack of technical and professional instruction in colleges. But the root of the evil is in the schools, where the application of Vocationalism is imperatively required. The

Vocationalism
needed in the
Schools.

talk is all of co-ordinating primary education with secondary and secondary with the University. Yet at least 90 per cent. of the children will never enter a University. It is as if the Greeks had trained all their children to contend in the Olympic games! The school should discover for every pupil a fit vocation, and divert early from the pen those who are apt only for the plough.

Travancore—where, by the way, there is a movement for the creation of a local University—is reported

In Travancore.

(*Wealth of India*, VII, 8) to be taking steps in the right direction. In order to turn the course of studies in the elementary schools from a purely literary into industrial and practical channels, provision has been made experimentally in six departmental higher grade elementary schools for teaching some craft or industry of local importance. If the practical turn thus given to elementary education proves a success, the scheme will be gradually extended. Instruction in commercial subjects is said to have been introduced in two private higher grade secondary schools. Besides the Weaving Institute, Nagercoil, and the Carpentry School, Quilon, both of which are departmental technical institutions doing good work, there were eight aided and nine unaided industrial schools in the State during the past year. If the example of Travancore were followed generally throughout India economic prosperity would come as a remedy for discontent. The University could supply teachers and counsel, without fostering unduly the pernicious breed of "examinees."

CAPE OF GOOD HOPE.

The Report of the Acting Superintendent-General just received deals with the year ending September 1916, its completion having been delayed by local circumstances. It indicates progress, "not sensational, but steady." The number of schools

The Report for 1916: Teachers' Limitations. grew during the year reviewed by 90 for white pupils and by 55 for non-European; the total enrolment at the end of it was 254,062 (of whom 111,067 were European pupils), an increase of 11,082. At the annual inspections of the schools an individual examination of the pupils, both oral and written, is conducted by the inspection. The percentage of the teachers (9,743) under the Education Department uncertificated, whilst lower than in 1915, was still unduly high. The pupil-teacher system is still the main source of supply. The Examination Reports for 1917 (*Education Gazette*, XVIII, 4) show that candidates for the teacher's office have their limitations in respect of knowledge and intelligence at the Cape of Good Hope as well as in England; to which fact the following statements made in the Second Class Teachers' Certificate Examination bear witness. "The Society of Jesus was a haven of rest for those who were worn out with study." "Pestalozzi was a Simple Simon with all his spasms of theory." "It is only gradually that the fishers of the brain multiply and enlarge." "Every school must have a laboratory where the pupils may wash their hands." Yet one sentence condemned by the examiners seems to us fraught with wise admonition for pupil teachers: "During the adolescent period the teacher must not be an irritating mosquito."

The *Education Gazette* (XVIII, 6), writing on School Management, lays down that direct communications from assistant teachers to the School Committee, or vice versa, should not be made; that all

Loyalty.

communications should pass through the hands of the principal; and that assistant teachers should never discuss with any member of a Committee or of the outside public the real or imagined shortcomings of their chief. Loyalty to the head master is imperative in the interest of the school and, indeed, of education. But we have known cases in which a head master, having left a school, has railed at it, as if the loyalty of his colleagues had been a personal tribute to himself and none were required from him.

SUDAN.

The Report of the Gordon Memorial College, Khartum, shows that in spite of adverse conditions and depleted staffs the work of the College, both in education and in research, is proceeding satisfactorily.

Gordon
College.

The Boy Scout movement has been introduced. Four Kadis, the first who have been through the primary school before entering the Kadis' Section, have been recommended for appointment in the Sharia Courts. Through the impulse of the Gordon College elementary vernacular education is spreading rapidly over all the land. Valuable research work has been done in bacteriology and entomology. Of all these things it is pleasant to read. But is Gordon the only soldier to be commemorated in the Sudan? It is proposed to erect a medical school in Khartum as a memorial to Lord Kitchener. The native response to an appeal for subscriptions has been remarkable; and, poor as the country is, £9,000 has already been collected.

ARGENTINE REPUBLIC.

In July we published, on what we deemed to be good authority, a short paragraph on Boy Scouts in the Argentine Republic. Mr. J. E. Green writes from

Of Boy Scouts.

Buenos Aires, in reference to it, that the organization is confined almost exclusively to that city; and that the long excursions we mentioned are mythical. There seems to be some opposition between native and English Scouts. The essential fact is that Scouting has reached the Argentine, where we hope that the movement will make progress, unimpeded by local jealousies.

H.R.H. PRINCESS LOUISE, DUCHESS OF ARGYLL, has consented to become the Patroness of the Central School of Speech Training and Dramatic Art. The school, which returned to its old quarters at the Royal Albert Hall after Christmas, has secured the services of Dr. W. A. Aikin as Lecturer in Voice Training. Dr. Aikin will do daily practical work at the school during the coming term.

THE Cambridge Training College for Schoolmasters will reopen on January 14, on the four years' course (of three years' University training, followed by one year of professional training).

UNIVERSITIES AND SCHOOLS.

WALES.

The half-yearly meeting of the Board was held on December 12 at Hereford. The work was chiefly routine in character and no question of policy or of public interest was discussed. The Board for some inscrutable reason are still hesitating about making a formal application to the Examinations Council for the recognition of their examinations as Approved Examinations, and some members seem more inclined to set up unsubstantial bogies than to proceed with the work of co-ordinating the examinations. Even on such a comparatively trivial question of policy as this, the time of the Board was taken up in discussing questions of autonomy and the necessity of safeguarding it, as if they suspected some insidious action on the part of the Board of Education in the proposal that Wales should join in the scheme. The Board, it should be stated, have in no way tried to influence the Central Welsh Board, and therefore it is incomprehensible why a section of the latter should exhibit this nervousness or adopt obstructive tactics. The head masters and head mistresses, at their annual meeting at Shrewsbury, passed a strong resolution in favour of the suggestion, and this opinion should have removed from the minds of doubtful persons any feeling of anxiety as to the position of the Board. However, it is practically certain that an application will be made for recognition.

At the close of the business session, a second session was held to discuss the reports on Music and Art in the Welsh Intermediate schools. The report on Music was drawn up by Dr. D. Vaughan Thomas, as the result of his inspection of a certain number of schools, and it contained several suggestive recommendations. As an expert, of course, he has a tendency to lay great stress on the development of singing in the schools, but his report suffers from the common fault of all specialists' reports that no guidance is given to a harassed head master as to how he is to construct a time-table which will enable their suggestions to be put into practice. Mr. A. Lyon, Head Master of Hawarden School and an expert and enthusiastic musician, led the discussion in a rather critical speech. He paid a high

compliment to the capabilities of Welsh boys and girls, and went so far as to say that, under proper training, there was no piece of music which they could not sing in a thoroughly satisfactory manner. He has no doubt as to the native genius for music, which is only awaiting an opportunity for its full development. He strongly dissented from the views of Dr. Lloyd Williams as expressed before the University Commission, whose acquaintance with the work of the schools was so meagre that he had no means of forming an opinion about it. Dr. David Evans, the Examiner in Music under the Central Welsh Board, together with Dr. Vaughan Thomas, continued the discussion. The specialist inspector in Art was Mr. Fred Richards, and he has published a valuable report. The question of art teaching is of national importance, and therefore the responsibility for the art teaching of the youth of Wales must be upon the whole system of Welsh education—not only upon the teachers, but upon the educational authorities who control and the citizens who provide the funds. At present art in Wales has been relegated to two or three art schools and to one or two picture galleries—to live a short life in the one, or die a lingering death in the other. It has received little or no encouragement from educationists. With this gloomy view of the position of art before him, Mr. Richards has interesting suggestions for raising it to its rightful position among the subjects in the curriculum of the intermediate school; and he insists vigorously on the importance of art in any properly correlated scheme of study. The first and foremost duty is to provide well trained teachers to direct and guide the pupils; scholarships and bursaries must be offered to divert the splendid talent of the youth of the Principality in the direction of arts and crafts; a proper art-room should be provided; and there are other useful suggestions which will appeal to all who are interested in art teaching. Whether Wales is as backward in this subject as the report indicates or not—and it should be said that the conclusions in this report are not altogether agreed to—there is no doubt that Mr. Richards has succeeded in drawing up a stimulating and original document.

Miss Vivian, Head Mistress of Newport Girls' School, was elected a member of the Executive Committee of the Central Welsh Board.

From the statistical tables published by the Central Welsh

RECENT AND STANDARD TEXT-BOOKS.

MATHEMATICS.

A First Course in the Calculus. By W. P. MILNE, M.A., D.Sc., Mathematical Master at Clifton College, Bristol, Examiner in Mathematics, University of St. Andrews, and G. J. B. WESTCOTT, M.A., Head Mathematical Master, Bristol Grammar School, formerly Scholar of Queen's College, Oxford, and University Mathematical Exhibitioner. Crown 8vo. 3s. 6d. [Note Ready.]

The first part of this First Course is devoted to the Differential Calculus, with applications to Rates, Maxima and Minima, and Geometry. The second half deals with the processes of Integration in their application to Areas, Volumes, Centres of Gravity, Moments of Inertia, and Centres of Pressure.

Dynamics. By R. C. FAWCETT, M.A., B.Sc., sometime scholar of Christ's College, Cambridge; Head of the Military and Engineering side, Clifton College. Part I, Second Edition, 3s. Part II (now ready), 2s. 6d.

For details of other volumes in this well-known series, edited by Wm. P. Milne, M.A., D.Sc., Clifton College, apply to the publishers.

Messrs. BELL also issue standard text-books of
Arithmetic, Algebra, Geometry, and Trigonometry,
by Messrs. PENDLEBURY, BAKER and
BOURNE, BORCHARDT and PERROTT, &c.
For details and prices please apply to York House.

SCIENCE.

Revised editions of Standard Text-books of Chemistry, by ALEXANDER SMITH, B.Sc. (Edin.), Ph.D., F.R.S.E., Professor of Chemistry and Head of the Department of Chemistry in Columbia University, are now ready as below:—

Introduction to Inorganic Chemistry. 8vo, 35th Thousand. Over 900 pages. 10s. 6d. net.

Experimental Inorganic Chemistry. For use with the above. 69th Thousand. 4s. net.

General Chemistry for Colleges. New Edition, entirely rewritten. Demy 8vo. 672 pages. 9s. net.

A Laboratory Outline of College Chemistry. A new Laboratory Outline for use with the College Chemistry. 4s. net.

Elementary Chemistry for Schools. Adapted by H. A. WOOTTON, M.A., B.Sc., Senior Science Master, Westminster School. Over 400 pages, with numerous Diagrams. 6s. net.

A Laboratory Outline of Elementary Chemistry. Crown 8vo. 2s. 6d. net.

The increased prices now charged for these books are the result of the heavy cost of transport from America, and will be altered so soon as conditions admit.

Inorganic Chemistry. By JAMES WALKER, D.Sc., Ph.D., F.R.S., Professor of Chemistry in the University of Edinburgh. Eleventh Edition, revised and Enlarged. Crown 8vo. 5s. net. (Ready Early in 1919.)

A new edition of the Elementary Chemistry, revised and considerably augmented, covering the ground required by candidates up to and including the matriculation standard.

Inorganic Chemistry for Upper Forms. By PERCY W. OSKROFT, M.A., Uppingham School. 496 pages, with numerous Diagrams. Second Edition. 6s. net.

"The exposition is very clear, and the blend of theory, informative description, and problems, will commend the work to many experienced teachers. . . . The work as a whole appears admirably fitted for its purpose."—*The Journal of Education*.

An Introduction to the Study of Plants. By F. E. FRITSCH, D.Sc., Ph.D., F.L.S., Professor of Botany, East London College, University of London; and E. J. SALISBURY, D.Sc., F.L.S., Lecturer in Botany, East London College. With over 250 Illustrations. Third Edition, revised and augmented. Demy 8vo. 6s. net.

This volume completely covers the London University Matriculation syllabus.

A new advanced volume which, together with the above-mentioned "Introduction," will completely cover the curriculum of the First Year University Course in Botany, and the Syllabus of the Senior or Higher School Examinations of London, Oxford, Cambridge, &c., is now being prepared by Messrs. Fritsch and Salisbury.

"Certainly one of the very best of the elementary textbooks of botany we have seen."—*The Journal of Education*.

SCIENCE.—contd.

Elementary Studies in Plant Life. By F. E. FRITSCH, D.Sc., Ph.D., F.L.S., and E. J. SALISBURY, D.Sc., F.L.S. With over 150 Illustrations. Crown 8vo. Second Edition. 2s. 6d. net.

"It would not be easy to find a book better suited to the needs of junior students."—*Nature*.

Food Gardening. By H. VALENTINE DAVIS, B.Sc., Lecturer in Rural Science and Gardening in the Cheshire County Training College, Crewe. Second Edition, revised and enlarged. 1s. net.

"Vegetable culture has become a very important homecraft in these days, and this little book will be found a useful guide."—*Nature*.

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2.

Board we find that the number of pupils at the schools was 18,283, as compared with 16,955 in the year 1916-17, and that there was a substantial increase in each county except in Monmouthshire. The democratic character of the schools is evident from the fact that 16,391 pupils entered them from the elementary schools, though these figures, it should perhaps be explained, do not imply as much as they would do in England, owing to the far wider use of the primary schools in Wales by all grades of society. The percentage of girls who remained in the school above the age of sixteen is just under 16, of boys only about 8½, which is the lowest for several years, and probably directly due to the effect of the war.

At the half-yearly meeting of the University Court, which was held at Chester, the chief business was to consider a series of recommendations drawn up by Sir H. Reichel, with regard to the various Committees which are to control the future University of Wales. In the main the suggestions of the Royal Commission were adopted, though it was agreed to defer the final consideration of their constitution until another meeting. At the same Court Dr. H. Walford Davies was appointed Musical Director, in which capacity he will be responsible for advising the University on the best methods of developing musical education in Wales. He has also just been appointed Professor of Music at the University College of Wales. It will be remembered that this important appointment was made possible by the generosity of the Misses Davies, of Llandinam, who take the keenest interest in music. The University College of Aberystwyth has also just been made the recipient of another gift of £20,000 from Major D. Davies, M.P., and his sisters, towards the foundation of a Chair of International Politics. Major Davies has throughout been a staunch supporter of the principles of the League of Nations, and he has taken this practical method of inculcating them in the minds of the younger generation of Welshmen; and Aberystwyth is also to be congratulated that it is the first of the Colleges to be in a position to embark upon original research bearing upon this important question of international relations.

Lord Kenyon was re-elected Senior Deputy-Chancellor and Major D. Davies as Junior Deputy-Chancellor.

The Right Hon. W. M. Hughes, the Australian Prime Minister, had promised to attend the annual general meeting of this Association at Shrewsbury, but he was unfortunately unable to do so owing to illness. The business was mainly of a routine character, such as the consideration of the Central Welsh Board schedules and examination papers. The address of the President, Miss Davies (Llanelli), dealt with the effects of the war upon the schools, and outlined what she considered to be the lines of progress in the future. In a forcible address she pleaded for a more spiritual atmosphere in the schools, and warned the members against too great a faith in mere materialism. Resolutions of appreciation of Mr. Fisher's great work in Parliament for education were enthusiastically adopted. It was resolved that a Special Committee be appointed to obtain the best possible advice on the erection of artistic school memorials to the masters and boys who have given their lives in this great war. There is a serious danger lest unworthy monuments be set up, and therefore the Association tried to guard against this calamity by acting together to secure the services of some well known authority to guide the members.

Mr. A. Lyon, of Hawarden School, was elected President for 1919, and Miss D'Auvergne, of Welshpool School, to fill the vacancy on the Executive Committee.

SCOTLAND.

President Poincaré, who has for the last four years been Lord Rector of the University, has intimated to Principal Sir Donald MacAlister that he hopes to come to Glasgow before the end of his fifth year of office. Draft Ordinances providing for payments in respect of pensions or allowances for lectures, assistants, &c., and for the foundation of a Chair of Mercantile Law, have been approved by the Senate and the General Council. The University Court and the Senate have also had under consideration a proposal to institute post-graduation courses for medical graduates. Prof. Latta has been elected by the Senate as one of its Assessors on the University Court.

As the result of a conference with the other University Courts and the Privy Council, the Court have agreed to amend their recent Ordinance instituting a degree in Education, to the effect that the title

CATALOGUES AND LEAFLETS TO

LONDON: 1 AMEN CORNER, E.C. 4

SIR ISAAC PITMAN & SONS, LTD.

of the degree shall be Bachelor of Education, instead of Master of Education, as originally intended. The Rev. R. H. Calder, Minister of Glenlivet, Banffshire, has given to the University a sum of £250 to found a prize for English (including Scottish) verse, to be called the Calder Prize for English or Scottish Verse. The value of the prize is £35. It is to be offered for competition every third year, and it is open to students matriculated in the academical year of the award.

The University has suffered a severe loss through the death, after a very short illness, of Dr. P. Hume Brown, Professor of Ancient (Scottish) History and Palæography. He was elected to the Chair on its foundation in 1901, and in 1908 he was appointed Historiographer Royal for Scotland. His work as a professor was of a very high order. He made his Chair a centre of palæographic studies in the old texts of history, and many of his pupils have done him honour in works of their own. His published work consisted of an almost continuous series of valuable books on Scottish History, including his edition of the Privy Council Register, in sixteen large volumes of national, governmental, and legal annals and archives. He also did important service to the Carnegie Trust in connexion with the work of its Fellows and scholars in Scottish historical and literary research. Prof. Hume Brown has bequeathed to the University all his books and facsimiles dealing with palæography, and also a sum of £1,500, for the institution of a prize in connexion with the subject of Scottish History, which is to be open by competition to students of the Scottish Universities and is to be awarded annually.

In June last the Glasgow Branch of the Educational Institute adopted a motion proposing that, to meet the present cost of living, no salary should be less than £140 and that teachers on retirement should have their retiring allowance raised to at least £140. It was also resolved that all teachers should receive an immediate increase of £50, and that the scale should proceed thereafter by annual increments of 10s. a week to £350 a year. These proposals were submitted to the Glasgow School Board, which after long delay have adopted by a majority the following motion:—"That a bonus, revisable every six months, at the rate

of £35 per annum be paid to all whole-time service men teachers at or below a salary of £245 per annum, and to all such women teachers at or below a salary of £195, provided that the day-school emoluments from salary and bonus combined shall not exceed, in the case of men, £250 per annum, and in the case of women £200 per annum. The Board also resolved to ask the Treasury to provide 50 per cent. of the bonus.

IRELAND.

The Redistribution Act, so far from reducing the number of Irish representatives in Parliament, increased them by two, from 103 to 105. The two extra members are returned one each by the new Universities—the National University, consisting of three constituent colleges in Dublin, Cork, and Galway; and the Queen's University, Belfast. Dublin University retains its privilege of returning two members. In all three Universities there were contests, the results of which will be known before the New Year has come. For Dublin University there are four candidates, three Unionists and one Nationalist. The last is personally perhaps the most interesting. The son of the late Dr. Gwynn, Regius Professor of Divinity, Mr. Stephen Gwynn, although three of his brothers have been Fellows, is not himself an *alumnus* of Trinity College, Dublin, but a graduate of Oxford. He sat in the last Parliament for Galway, and not only has in person fought in the war, but has done his best to persuade his countrymen to contribute their fair share of the fighting forces at the Front. He remains a Home Ruler, but to meet the present difficulty proposes four Local Councils with a Central Parliament in Dublin. Of the other three candidates, one is the old member, Mr. A. W. Samuels, the Attorney-General, and the others are Mr. H. Jellett, K.C., and the celebrated surgeon and throat specialist, Sir R. Woods. Sir E. Carson, who represented Trinity for nearly thirty years, has put up for a seat in Belfast. For the National University and the Queen's University the contest is between two candidates—in the National, between a Nationalist, Dr. A. W. Conway, F.R.S., Professor of Physics,

and a Sinn Féiner, Mr. J. MacNeill, Professor of Irish; in the Belfast University, between a Unionist, Sir Wm. Whitla, Professor of Medicine, and a Sinn Féiner, Mr. S. Dolan, for some years a teacher in the Christian Brothers' Schools, Belfast. It is not without importance that several of these candidates have in their election addresses called attention to the needs of Irish education. For example, Dr. Conway says: "The inadequate provision for primary and secondary education in Ireland and the unsatisfactory status and remuneration of the teachers demand immediate reform."

It is good to see the claims of education brought prominently forward. The two Commissions which are still sitting to deal with the salaries of primary education and the reform of secondary education will shortly have completed their labours. Appointed considerably later than similar committees in England and Scotland, they have also taken longer to consider the questions submitted to them. This is but natural, as the Irish problems are more difficult and complicated, and the organization of Irish education has fallen much behind that of the sister countries and will accordingly require more sweeping reform. The Committee on Intermediate Education has had twenty-two sittings and has adjourned till January, when it is likely to consider its report. The English and Scotch reports were followed by Acts of Parliament which were passed with little difficulty. One of the first things, therefore, in the new Parliament should be an Act dealing with Irish education, which should enable it to be brought up to date and should abolish for good that ancient relic, the payment of grants on the results of individual examinations. It would be easy to suggest other reforms, but it will be better to await the report.

Meanwhile Ulster, whether for electioneering purposes merely or in sheer earnest, has struck out a line of its own. A demand has been made that it should be separate from the rest of Ireland, and in education, among other things, should go its own way and assimilate itself to England. In education this will mean having a local rate and local control. In other words, the schools would be put under the Local Authorities. An influential deputation has waited on the Corporation in Belfast and pressed this reform upon the City Fathers. It is stated that there is a deficiency of accommodation for 15,000 children in primary schools, while many of the existing schools are in an insanitary condition, Belfast having increased rapidly and its population having quite outgrown the present schools. The estimated cost of new buildings is £150,000. It was not to be expected that this demand would pass without opposition and the Roman Catholic Bishop has entered an emphatic protest. He foresees the shadow of undenominationalism. Whether with justice or not, it is not possible to say at this point, but it is only fair to add that in Belfast it is not the Roman Catholic schools of which complaint is made that they are insufficient in number or inadequate in equipment. The claim made in Belfast is, however, a warning to the Government to tackle the whole question in such a way as to give no reason for complaint on religious grounds. Whatever the case in England and Scotland, where the population is predominantly Protestant, in Ireland no solution will be feasible which ignores the general desire of practically all classes for denominational education.

The Report of the Intermediate Education Board for the year 1917 has been published. It contains summaries of the numbers of students examined and passed in June 1917, with details of the various subjects, the number of prizes and exhibitions awarded in the different grades, and the accounts of the Board for the year ending in December 1917. Administration cost £8,000, inspection £5,000, examinations £14,000, rewards £6,000, and the school grant £51,000. The total income of the Board was £85,000. These accounts do not include the Birrell grant (£40,000), the Duke grant (£50,000, which was not paid until 1918), nor the Science and Art grant (£30,000). The most important part of the Report is on page 6, where the Board state their views on the requirements of secondary education as follows:—"In their Report for 1916 the Board outlined the steps which, in their opinion, ought to be taken in order to remodel the system administered by them. At the same time they drew attention to the inadequacy of the funds placed at their disposal, and emphasized the claim of Ireland to a large increase in the sums devoted to secondary education. To carry out the scheme outlined by the Board would involve legislation. They wish again to call attention to their Report for 1916, and to urge that the powers

DURHAM UNIVERSITY JOURNAL:

A Quarterly Magazine of

LITERATURE AND EDUCATION.

The oldest University Periodical in the United Kingdom.

FOUNDED 1876.

THOMAS MURBY & CO., 6 Bouverie Street, London, E.C.4.

BOOKS. New or Second-hand.

ORDERS PROMPTLY DISPATCHED.

Inquiries from readers of "The Journal of Education," at home or abroad, will receive the personal attention of

JOHN DAVIS (Successor to THOMAS LAURIE),
13 Paternoster Row, London, E.C.4.

necessary to carry out a really efficient system of secondary education should be given to the responsible secondary authority. With reference to the question of funds, the Board urged the necessity of granting Ireland's proportionate share of the new grants which were then about to be made for secondary education in England. This demand has been met so far by a grant of £50,000, which is to be distributed in accordance with rules made by your Excellency. The Board understand that these rules will secure the distribution of the grant as a capitation grant based upon inspection rather than upon the results of examination. Such rules, together with the Intermediate Education (Ireland) Act, 1913, which gave powers to use inspection as the basis for paying grants within a limited amount in respect of children between the ages of twelve and fourteen, are undoubtedly a considerable step in the right direction; but they do not fully meet the desire of the Board for a complete recasting of the whole system administered by them."

Trinity College, Dublin, has within a year lost three of its Fellows. Last month we referred to the deaths of Prof. Kelleher and Major Stewart, who were both mathematicians. Now influenza has been responsible for the death of Mr. J. I. Beare, one of its most distinguished classical scholars. He was at one time Professor of Moral Philosophy and afterwards Regius Professor of Greek. A man of retiring disposition, he did not often come before the public, but on the occasions on which he did so, notably in his address on "Plato and Poetry" as President of the Classical Association of Ireland in 1916, he attracted attention by the beauty and sincerity of his thought, the refinement and nobility of his diction, and the breadth and soundness of his scholarship. He published one important book on "Elementary Greek Cognition" and has left another in MSS., practically complete, on "Plato."

The latest number of the *Journal of the Department of Agriculture and Technical Instruction* contains some articles of more than usual interest for teachers. There is a full report of the annual meeting of the Council of Agriculture with the Vice-President's address, and in addition there is a fully illustrated article on "Technical Instruction in Tralee," by H. O. Armstrong, the sixteenth of the series, together with official documents of technical instruction.

TO A PHILOSOPHER.

WE think to die is grievous,
Although to live be vain,
And other fates bereave us
With greater pain.

Though cares and jealous voices
And fears and selfish ends
May wreck who now rejoices
In love and friends,

Yet little seems ill fortune,
If life itself remain,
And few would death importune
As dearest gain.

Ah, why?—Because the shadows
Hang yonder terribly;
The mild Elysian meadows
Are hard to see.

And if some echo reach us
Of fairer realms beyond,
And priest and seer preach us
Our fears are fond;

Still lives most worn and weary
Have gleams of sun between,
When blind and blank and dreary
Seems the Unseen.

Yes, they, my friend, are wisest
Who walk with steady pace,
And keep, as thou advisest,
A placid face.

Like one who, as he journeys,
Looks up, then reads again
Nor frets how soon his turn is
To leave the train.

F. W. B.

GEOGRAPHY IN EDUCATION.

PHILIPS' HUMAN GEOGRAPHIES.

By JAMES FAIRGRIEVE, M.A.,
and ERNEST YOUNG, B.Sc.

Crown 8vo. with Coloured and Black and White Illustrations.

THIS series of elementary books is just what its names denotes—*human*. Everywhere the human note is predominant and the relation of man to his environment insisted upon. The books are not merely human in the sense that they treat of geography from the human point of view, but also because the kinds of human beings who live in different environments are fully described.

They are human, too, because they take account of the characteristics of the small human beings by whom they will be used. The books are written by men in actual touch with the problem of teaching young children, and they are written in a simple and interesting fashion. They are as logical as a proposition in geometry and almost as interesting as a fairy tale.

The series is distinctly progressive both in difficulty of language and of ideal. The first two volumes deal respectively with child and adult life in certain typical areas. Volumes III–VI cover the world on new and original lines.

The illustrations are new and novel and are specially drawn to suit the purpose of the lesson.

Book I.—CHILDREN FAR AWAY.
*THE LIFE AND DOINGS OF CHILDREN
IN OTHER LANDS.* Price 1s. 6d.

Book II.—HOMES FAR AWAY.

PRIZE COMPETITIONS.

THE prize for the December competition is awarded to "Bésigue."

The winner of the Translation Prize for November is Miss A. M. Webb, 7 Scarsdale Villas, Kensington, W.8.

Extract from *Théophile Gautier's "Caprices et Zigzags."*

By "BÉSIGUE."

If we were to say that we did not cast a single glance at the rest of the exhibition, we should draw down on our head the contempt of manufacturers, merchants, utilitarians, and Philistines of all sorts. Such is, however, the fact. We passed through without looking at this multitude of copper and steel monsters, mastodons and mammoths of industry, who wave their truncated arms, sigh with their iron lungs, and seem to borrow life's restlessness and respiration from steam alone, in this furious and emotionless but untiring motion, in this activity of matter that can be carried to extremes without transgressing the holy laws of pity, for matter wears out and suffers not. The bobbins whirled like drunken dancers, disappearing in the dimness of the rapidity. The pistons raised and lowered their broken limbs with a plaintive grunt, like woodchoppers felling an oak-tree trunk; the madcap pulleys made their leathern and gutta-percha beltings strike noisily together; the cog-wheels used their teeth on each other, the rollers rubbed together with a whistling sound, the safety-valves clicked their tongues, the springs called their nerves and pawls into play; all these metallic and Plutonian slaves, invented by the genius of man, were vying with each other as we passed. These machines, with their creakings, their dull thuds, their piercing whistles, cried out to us: "I do the work of six thousand spindles; I take the place of five hundred blacksmiths' hammers; I weave an Indian shawl more regularly than a Cashmere workman on the threshold of his hut; I make machines that will work as I do myself; I, with my brazen fingers, fold letter-envelopes as deftly and as neatly as a pretty woman's pink fingers could do it; only, in a single day I make enough to seal up all the secrets of love, diplomacy, and business in the world."

The passage from Gautier was an example of his copiousness of vocabulary, and the difficulties lay almost entirely in the meaning of simple words. The prize version has two or three errors. *Moignons* is "stumps" rather than "broken limbs"; its applicability to the outward appearance of a piston is obvious. We are not quite clear what a "pawl" is, though we have looked up the word in the dictionary, but *détente* is the "trigger" of a gun or the "release" of a spring; the sentence is difficult to render; "the springs flung out and tightened their sinews" is the best we can do. "Plutonian" is a legitimate rendering of *plutonien*, but it does not convey much meaning to the average reader. The word is connected with the old theory that geological changes were produced by the agency of fire. "Fire-begotten" would perhaps hardly suit the style of the passage, but "all these slaves, children of fire and metal" might pass. There were several better renderings than that of the prize version for *disparaissant dans l'éblouissement de leur rapidité*, e.g. "lost to sight in their dazzling rapidity." *Poulies folles* is "loose pulleys," i.e. ordinary pulleys. "Caprices et Zigzags" is only a book of travel-chatter, but it has some slight historical interest as showing how London looked to a Frenchman in the fifties.

It seems necessary to state that not more than one version may be sent in by any one competitor.

We classify the 68 versions received as follows:—

Class I.—(a) Bésigue, P.M.S., Acheteur, M.P., Principilus, W.W.M., Leander, Dane. (b) Rusticus, M.E.D.H., Anne, Razzle, Petite Bête, Usine, Chingleput, Aire-sur-Lys, Borealis, Pierrelotte, Garnet, En Avant.

Class II.—Eleanora, Merrythought, Kentucky, Echo, M.M.T., Lisle, Young Lochinvar, Vieux-rose, Gepid, Louisiana, Lucinde, Tidy Betty, Ixia, Tibert, M.A., Sirach, Gothicus, Somewhen, Inconnue, Bonheur, Neville, Gadget, Théo, E.A.N., Fleur-de-Lis, Alma, Persistent, Calvus, Cassandra, Willy Nilly, J.W.C.

Class III.—Virginia, M.D., Ecolière, Pamela, Cécile, Equi, Fool, Rival, Frances, Fir, P.B.M., E.A.S., A.H.B., Calim, Olivet, L.G., Nautilus.

PLIMSOLLS.

Owing to the shortage of these shoes we have brought out a substitute, a plain black canvas one-strap shoe with "jute soles," a shoe that will wear well for drill or play. Having no rubber in them, they will not "draw" the feet. Sizes run from 12's child's to 7's ladies, all one price, 3s. a pair. A sample shoe will be sent to Mistresses for approval, and orders booked in rotation for the coming Term.

Baby Shows and Day Nurseries.

The organizers of the Day Nurseries will profit greatly by the practical experience of the Baby Shows and Infant Welfare Centres. Methods which have been successful and foods which have proved their worth there, will be adopted by the new Nurseries.

At the most carefully judged Baby Shows and the most carefully supervised Centres for Infant Welfare,

ROBINSON'S "Patent" BARLEY

has been tested and has stood the test. Again and again has the First Prize Baby at the Baby Shows proved to have been fed on Robinson's "Patent" Barley.

Many a baby never has a fair start in life—born sickly, ailing and unable to be fed by Nature's method. Yet from these frail, suffering little bundles of mortality Robinson's "Patent" Barley has produced fine sturdy children. That is why in the Day Nurseries this famous food will be adopted and will have yet other opportunities of bringing health and happiness to our little growing citizens.

A Prize of Two Guineas is offered for the best translation of the following extract from Von Sybel's "Die Erhebung Europas gegen Napoleon I":—

WELLINGTON.

Ueberall, in Angriff und Abwehr, in Jugend und Alter, war er stets derselbe, stets ruhig und seiner bewusst, eine Natur von unverwundlicher Arbeitskraft und Solidität. Weder in seiner Erscheinung noch in seinem Benehmen war ein poetischer Zug, nicht fesselnde Anmut, nicht flammende Leidenschaft; er war im Verkehre trocken, steif in seiner Haltung, bis zum Pedantischen regelrecht, und hatte mit dem Ausdruck oft mühsam zu ringen. In seinen politischen Anschauungen war er ein harter Tory, hasserfüllt gegen die Revolution, aus welcher Bonaparte's Despotismus emporgestiegen, aber auch ohne Verständniss für die tumultuarische Begeisterung des spanischen Volkes, ein Mangel, der ihm die Lösung seiner grossen Aufgabe vielfach erschwert hat. Dabei war er bis zur letzten Faser von stolzem britischen Nationalgefühl durchdrungen, mit dem er auf seine europäischen Verbündeten ebenso wie auf seine indischen Gegner hinabsah, und eine rücksichtslos egoistische Politik als völlig selbstverständlich betrachtete. Aber sein Leben zeigt, wie kein anderes, welch eine Quelle unendlicher Beglückung und Begabung in einem fest gestählten Pflichtgefühl springt. Er hatte seinen Willen auf das Rechte gerichtet und beugte jede Faser seines Daseins unter diesen Willen. Während Napoleon gern von seinem Sterne redete, nahm Wellington das Wort: *Virtutis fortuna comes* (das Glück dient der Tüchtigkeit), zu seinem Wahlspruch. War ihm die elastische froh aufjauchende Frische eines Achill und Alexander versagt, so besass er dafür die schrankenlose Herrschaft über sich selbst, jene Herrschaft, die nicht bloss die Leidenschaften bändigt, sondern sich auch zu jeder Leistung emporhebt, weil sie es so will. Dieser Held der bedächtigen Verteidigung brach doch, wenn er es einmal beschloss, so energisch und heiss und unaufhaltsam reissend zum Angriffe vor, wie der wildeste Fanatiker—nur dass er, seine Aufgabe gelöst, noch atemlos von der Anstrengung, gleich wieder ernsthaft zusammengekommen, kühl und bedächtig einherschritt. So fesselte er das Glück, das er verachtete, fest an seine Fahnen; er wurde, obwohl an Genialität nicht mit Napoleon zu vergleichen, des Welteroberers Meister; und

sein Leben wurde ein einziges Zeugnis für die so oft verkannte Wahrheit, dass in den menschlichen Dingen ein grosser Charakter doch schwerer wiegt als der grösste Geist.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by January 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London. E.C. 4.

DR. E. A. ABBOTT, Head Master of the City of London School from 1865 to 1889, was presented with an address signed by many distinguished old pupils, readers of his books, and other friends, on the occasion of the attainment of his eightieth birthday on December 20. The signatures of the address included the Provost of Eton and the Head Masters of King Edward's School (Birmingham), Charterhouse, City of London, Clifton, Dulwich, Eton, Haileybury, Harrow, Manchester Grammar School, Rugby, St. Olave's (Southwark), Sherborne, Wellington, Westminster, and Winchester. The address included the following tribute to Dr. Abbott's educational work:—"We call to mind that the period of your head mastership was one of signal prosperity in the history of the City of London School. Yourself a classical scholar of the finest Cambridge type, you maintained and enhanced the reputation which the school had won under your predecessor as a place of classical education. At the same time it was due to your enlightened zeal as an educational reformer that the City of London School led the way among the public schools of the country in treating the English language and English literature as subjects of serious study for pupils of all ages."

Posts Vacant—continued.

These School and Teachers' Advertisements are continued from page 53.

The Technical College

LOUGHBOROUGH, LEICESTERSHIRE.

H. SCHOFIELD, M.B.E., B.Sc. (Hons.) Lond.; A.R.C.Sc.Lond., Assoc.M.Inst.C.E., PRINCIPAL.

DEPARTMENTS OF MECHANICAL AND ELECTRICAL ENGINEERING.

Complete Courses of Training are arranged in both Theory and Practice of Mechanical Engineering.

The Workshops of the College provide accommodation for 500 students working at the same time.

The equipment is on most modern and comprehensive lines, and comprises plant for turning, fitting, milling, grinding, automatic lathe operating and tool setting, tool and gauge making, foundry work, pattern making, drawing office work, heat treatment, viewing and testing of all kinds.

None but first-class work of a productive character is undertaken by the students, working under the skilled supervision of a fully qualified technical staff.

The complete course covers a period of five years, during which works training in all the above sections will be given, and this will be accompanied by a full theoretical course of instruction in the College Lecture Rooms and Laboratories.

Intending students should be at least sixteen years of age, and have had a good Public School or Secondary Education.

The fee is £5 5s. per term, and the next term will commence on January 14, 1919.

Boarding accommodation is provided in Hostels attached to the College, full particulars of which, together with illustrated Prospectus, will be forwarded upon application to the Principal.

(For many years at 34 BEDFORD STREET, STRAND, LONDON, W.C.)

Telegraphic Address:
Scholasque, London.

SCHOOL TRANSFER DEPARTMENT.

Telephone
Gerrard 7021.

Schools transferred and valued. No charge whatever will be made to vendors of Schools or School Partnerships by Messrs. GRIFFITHS, POWELL & SMITH unless a sale is effected or agreed upon. No commission charge whatever made to Purchasers of Schools or School Partnerships.

Applications from intending purchasers are solicited for the following properties:

GIRLS' SCHOOLS.

Hants (Seaside).—Partnership, with view to succession, in flourishing Girls' Boarding and Day School. Established 35 years and conducted by vendor in partnership from 1916 to 1917, and since September 1917 alone. Gross receipts past year, £1,217. Net profits past year, £364. Number of boarders about 8; terms 45 guineas per annum. 106 day pupils; terms, 45 guineas to 12 guineas, without extras. Rent of detached house—large, lofty rooms, garden and gravel playground, school room (separate from house)—£120 per annum. Price for half share £350. School and household furniture by yearly instalments. The school is in a really flourishing condition.—No. 5044.

Kent (Seaside).—Boarding and Day School for Girls. Established over 50 years. Gross receipts past year over £625. 6 boarders paying £30 to £45 per annum each; 65 day pupils paying up to £3. 15s. per term without extras. Extras about £3. 80 per term. Rent of detached house held on lease, £78. Price for goodwill, £225, or the vendor would accept one term's fees on all pupils transferred. Furniture at valuation. The vendor states that during the last three terms numbers have increased rapidly and that the gross receipts for the first two terms of this year were £462. 17s. 6d.—No. 6,003.

Essex (Seaside).—Transfer or Partnership. Boarding and Day School. Little boys also

received. Gross receipts past year about £400. 7 boarders at about £40 per annum and 20 day pupils paying from 2 to 4 guineas a term. Large house standing in own grounds, almost open country with orchard, tennis lawns. Rent about £75. Price for goodwill, school, and part household furniture, including two good pianos, school building, &c. about £350. Price for half share by arrangement.—No. 6004.

Somerset.—Girls' Boarding and Day School. Established many years. About 11 boarders bringing in £145. 16s. per term, and 8 day pupils bringing in £10. 19s. per term. Vendors removed the school to the present house last year, and have saved £100 since. Rent of 14-roomed house £60, or the vendors would sell the freehold for £850. Price for goodwill only £150. School furniture at valuation.—No. 6,002.

BOYS' SCHOOLS.

Essex (Seaside).—Boys' Boarding and Day School. Established 21 years. Gross receipts past year £2,800, average of three years £2,000. Net profits past year £630. Average of three years about £480. 50 boarders. Terms average £40. 70 day pupils. Fees about £3. 10s. per term. Extras about £200 per annum. Rent of house built for a school, £150. Price for goodwill about £1000. Furniture at valuation. Only part need be paid down.—No. 6,990.

N. Wales.—Good middle-class Boarding and Day School. Number of boarders 10, at fees from £48 to £60 per annum, and about 60 day pupils, fees £6. 10s. to £13 per annum. Rent of two large houses thrown into one, £80, but a part has just been let off for £40 per annum. Price for goodwill and school furniture, only £450.—No. 6,982.

East Coast.—Boarding and Day School. Established many years. Gross income about £978. The vendor will give full details as to the gross and net income. Number of pupils, 60. The premises are the vendor's own property. Price for goodwill, £300. Furniture at valuation.—No. 6,968.

London, S.W.—Day School for Boys and Girls. Established 20 years. Gross receipts past year, £469. Net profits, £250. Number of pupils, 71. There are about 40 music pupils. Rent £60 inclusive. Price for goodwill, only £150.—No. 5,089.

Surrey.—For immediate disposal—owing to the serious illness of the vendor—flourishing Boarding and Day School. Established many years. We understand boarders were refused last term. The gross income for last year was £1,250 as returned by the Income Tax Authorities. Price for goodwill, school furniture, and some household furniture only £300 to £400, or about £300 for goodwill and furniture at valuation.—No. 6,988.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—

GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 and 13 Henrietta Street, Covent Garden, London, W.C.2.

Posts Vacant—continued.

SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of BOYS' and GIRLS' SCHOOLS on the books in their Transfer Department. On learning a Purchaser's qualifications and requirements, they will send notices of opportunities likely to prove suitable, without making any charge to Purchasers.

ASSISTANT MISTRESSES

seeking appointments in Public or Private Schools for the coming term or after Easter should send particulars of their qualifications and requirements to

TRUMAN & KNIGHTLEY, Ltd.

This Agency enjoys the patronage of the leading Public and Private Schools for boys and girls, and is in a unique position to find remunerative openings in all branches of the teaching profession.

The number of vacancies now on the books is too large to permit of a satisfactory selection being inserted in this page.

The requirements of each applicant receive careful consideration and attention, and all communications are treated in strict confidence.

There is no registration fee, and the commission charge to those for whom an appointment is secured is very moderate.

There are separate departments for

LADY MATRONS AND HOUSEKEEPERS FOR SCHOOLS,

and for

ASSISTANT MASTERS.

SCHOOL TRANSFER DEPARTMENT.

Ladies seeking partnerships or to take over a school of their own should communicate personally with Mr. Truman, who undertakes all negotiations connected with the transfer of schools and is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

THE CARSON-SMITH MATHEMATICAL SERIES.

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., LL.D., Professor of Mathematics in Teachers College, Columbia University.

ELEMENTS OF ALGEBRA.

 Part II. 214 pages **3s. 0d. net.**
 Parts I and II. 538 pages **5s. 6d. net.**

PLANE GEOMETRY.

Part I. 266 pages **3s. 0d. net.**
 Part II. 216 pages **3s. 0d. net.**
 Complete. 482 pages **5s. 6d. net.**

Among recent text-books which embody the modern spirit of mathematics teaching, the CARSON-SMITH MATHEMATICAL SERIES has for more than four years held a prominent place. Through the emphasis, wherever possible, of the practical aspects of the subject, these books stimulate the student's interest and bring home to him the fact that mathematics has a direct bearing upon the requirements of everyday life. The books abound with problem and rider material of a practical nature, but at the same time the need for skill in actual performance has not been overlooked, and both volumes retain those salient features of the successful drill book.

But an ability to *do* mathematics is not all that is gained by the pupil who uses these books. In addition, the authors assist him towards gaining that thorough understanding of fundamental mathematical principles which is essential if he is to pursue his study beyond its elementary stages, and which makes mathematics, when properly taught, of unique value as an instrument of culture.

AGRICULTURE.

Throughout all the discussion on the Reconstruction Programme for the country, Agriculture has held a prominent position, and in many recent speeches the Prime Minister and others have emphasized the importance of the scientific study of the subject. The undermentioned books combine the latest results of scientific research with full and useful suggestions for the student and practical farmer alike, and will be found of much value for reference purposes.

AGRICULTURE FOR BEGINNERS.

By BURKETT, STEVENS, and HILL. 355 pages. 4s. 6d. net.

A beginner's book which treats in simple fashion the various branches of agriculture. The volume includes many practical exercises designed to encourage the student to test for himself the truth of the statements made in the text.

THE ESSENTIALS OF AGRICULTURE.

By H. J. WATERS. 455 pages. 6s. net.

A book in which definite application of the essentials of agriculture is made to every important branch of farming. The general laws of farm mechanics and of farm economics are developed and applied throughout the book.

COUNTRY LIFE EDUCATION SERIES.

Equipment for the Farm and Farmstead. By H. C. RAMSOWER. 12s. 6d. net.

Fungous Diseases of Plants. By D. M. DUGGAR. 10s. 6d. net.

Garden Farming. By L. C. CORBETT. 10s. 6d. net.

Principles and Practice of Poultry Culture. By J. H. ROBINSON. 15s. net.

Soil Fertility and Permanent Agriculture. By C. G. HOPKINS. 12s. 6d. net.

The Principles of Breeding. Thremmatology. By E. DAVENPORT. 15s. net.

The Apple. By A. E. WILKINSON. 10s. net.

Types and Breeds of Farm Animals. By C. S. PLUMB. 10s. 6d. net.

CATALOGUE ON APPLICATION.

GINN AND COMPANY, 9 St. Martin's Street, Leicester Square, London, W.C.2.

THE EDUCATIONAL SUPPLY ASSOCIATION, Ltd.,

Having completed most of their contracts for Munitions of War, are now in a position to execute promptly orders for school furniture.

Imported woods are very scarce, and consequently very expensive, but The Educational Supply Association having purchased a large quantity of

ENGLISH OAK

are prepared to supply school furniture made of English Oak at reasonable prices.

The Ideal Desk for High Class Schools is the "Stanton" Desk.

The most perfect Hygienic Desk made—a sliding Desk.

It is supplied in six different patterns and in five distinct sizes—the different parts being carefully proportioned in each height.

The Stanton Desk was selected for the use of the Prince of Wales and Prince Edward of York when at their studies both at Marlborough House and Sandringham.

The Educational Supply Association at their Factory at Stevenage, Herts, manufacture every kind of School Furniture.

Pupils' Desks.
Masters' Desks.
Examination Desks.
Art Desks.
Pedestal Tables.
Cupboards. Lockers.
Forms. Tables.
Blackboards. Easels.
Cloakroom Fittings.
Wordwork Benches.

SCIENCE LABORATORY FITTINGS FOR SCHOOLS.

The Educational Supply Association have 25 years' practical experience in the fitting up of school laboratories and carry out the whole of the work, including the gas and water services, flues, and drainage.

The E.S.A. also supply simple benches for physical work only.
The E.S.A. have supplied laboratory fittings to:—

National Physical Laboratory, Teddington.
Science and Art Department, South Kensington.
Electrical Standardizing Institute, London.
St. Mary's Hospital Medical School.
Merchant Venturers' Technical College, Bristol.
King's College. Dulwich College.
Charterhouse School. Harrow Lower School.

THE "ESAVIAN" PATENT SLIDING AND FOLDING PARTITIONS AND SCREENS.

These partitions are constructed on an entirely new principle which is patented—sliding pilasters being provided between each pair of leaves, the sliding movements being fitted to the pilasters—this arrangement providing the easiest possible movement. Doors on the Esavian principle thirty feet high have been supplied and have proved to be thoroughly satisfactory and reliable.

The partitions can be supplied either made entirely of wood or partially glazed.

EVERYTHING FOR SCHOOLS

STEVENAGE HOUSE, 40-44 HOLBORN VIADUCT, LONDON, EC.

HARRAP'S LATEST PUBLICATIONS

AN IMPORTANT NEW BOOK.

THE HISTORY OF ARYAN RULE IN INDIA

From the Earliest Times to the Death of Akbar. By E. B. HAVELL. With Photogravure Frontispiece, 32 Full-page Plates and Maps, &c., and Full Index. 620 pages. Gilt top, 15s. net. Also in Half Morocco, 30s. net.

"An informing and illuminating work for which Students and Politicians should be profoundly grateful. Many illustrations of Indian Art and Architecture add to its value and interest."—*Yorkshire Post*.

AN INTRODUCTION TO THE HISTORY OF SCIENCE

By Dr. WALTER LIBBY, M.A. With Eight Illustrations. 304 pages. Size 7½ by 5 in. 5s. net.

"Efficiently written, and free from excessive detail."—*Saturday Review*.

HARRAP'S INTRODUCTORY ALGEBRA

By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh. Cr. 8vo, 180 pages, with Answers, 2s. net. Also without Answers, 1s. 9d. net.

From the Principal of a Preparatory School:—"Farquharson's Algebra is first-rate, and I shall put an order through in due course. I hope the book will have the success it deserves, for, of the large number of elementary Algebras I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."

ENGLISH EXTRACTS AND EXERCISES

For Comparative Study and Training in Composition. By F. H. PRITCHARD, Lecturer in Literature at the Municipal Technical School, Devonport. Large Crown 8vo, 256 pages, 2s. 6d. net.

An admirable practice-book in English for lower and middle forms in secondary schools, and for upper classes in primary schools. The main idea is to centre all the week's work in English round a suitable extract. The exercises are abundant and in many cases novel in character. No essential point in elementary English is left untouched, and wherever possible opportunity is taken to stimulate interest in the author or extract under consideration.

HARRAP'S PRACTICAL RUSSIAN GRAMMAR

By R. T. CURRALL, M.A., George Watson's College, Edinburgh. With Phonetic Transcripts, Exercises in the Russian Hand-writings and Vocabularies. 272 pages. Crown 8vo, 6s. net.

A RUSSIAN PRONOUNCING VOCABULARY

With an Introduction on Russian Pronunciation. By R. T. CURRALL, M.A., George Watson's College. Size 5½ by 3 in. 123 pages, limp cloth, 1s. net.

This book contains classified lists of more than 2,000 Russian words, with phonetic pronunciation of each and its English equivalent.

OLD FRENCH NURSERY SONGS

Arranged and Illustrated by ANNE ANDERSON. Accompaniment printed boldly for use at the Piano. With Eight Colour Plates and many Line Drawings and Decorations. Size 11½ by 8½ in. 7s. 6d. net.

This collection comprises some thirty charming French Songs.

Extract from *Musée*:—"The melodies are simple and beautiful in true French manner, the pictures are dainty both as to drawing and colour."

A FIRST SPANISH COURSE

By Profs. E. C. HILLS and J. D. M. FORD. With Exercises and Vocabularies. Crown 8vo, 340 pages, 4s. 6d. net. Key for Teachers only, 5s. 3d. net.

This easier course is designed for much younger pupils than the Authors' previous work.

"A prominent feature is the RESUMEN GRAMATICAL in Spanish at the end of each lesson."—*The Journal of Education*.

LIBRO DE LECTURA PARA PRINCIPIANTES

Edited by E. MAURER, Reading School. With Vocabulary and Exercises. Small Crown 8vo, limp, 160 pages, 2s. net.

LA VIDA DE VASCO NUÑEZ DE BALBOA

By M. J. QUINTANA. Edited with Introduction, Notes and Vocabulary, by A. E. WOOLF, D.Lit. Small Crown 8vo, 116 pages, 1s. 6d. net.

A "one term" Reader, the Text amounting to 64 pages.

CAPÍTULOS ESCOGIDOS DE V. BLASCO IBÁÑEZ

With Notes and Full Vocabulary, by ALEC E. WOOLF, M.A. Crown 8vo, 192 pages, 2s. net.

Selections—each one complete in itself—from the works of the foremost novelist of the present day, whose works have been translated into every European language.

N.B.—New Descriptive Lists of Books in French and Spanish will be sent on application.

THE MEASUREMENT OF INTELLIGENCE

By Dr. LEWIS M. TERMAN, with Introduction by Prof. J. J. FINDLAY, University of Manchester. Crown 8vo, 384 pages, 7s. 6d. net.

An important new book on Experimental Psychology and its latest application in schools and public institutions: provides for the first time a complete set of the Binet-Simon tests in the revised form in which they are used to-day.

These tests are explained and discussed in detail and supplemented by a set of cards reproducing in facsimile and appraising the actual performance of the subjects tested. (In the Press.)

London: GEORGE G. HARRAP & CO., LTD.

REVIEWS AND MINOR NOTICES.

PSYCHOLOGICAL DOCTRINE.

Psychological Principles. By JAMES WARD.
(21s. net. Cambridge University Press.)

This volume is sure of a cordial welcome from all who are interested in the subject. For many years Dr. Ward's friends have been urging him to publish in a suitable form his contributions to Psychology. Unfortunately, his article on the subject in the "Encyclopædia Britannica" appeared in some way to prevent this. It is true that the article itself was reprinted, but in a specially inconvenient format, which, however, did not prevent it from having a very wide sale and being extensively read. Its content, indeed, has become the property of all students of the subject, even of those who have never read the words of Dr. Ward himself. All teachers of the subject are Dr. Ward's debtors, whether they are conscious of it or not. It is gratifying, therefore, to have the Wardian doctrine set out in the handsome volume now before us. Its author admits that the conditions of its production have resulted in a sort of patchwork, and claims that at any rate the materials are entirely his own. The claim will be at once admitted by competent critics, who, on the other hand, will not be willing to admit the lack of system implied in the author's plea of "patchwork."

Another charge that he anticipates will be less easily disposed of. It has to be admitted that in a certain sense we have here "a belated book." Dr. Ward has no sympathy with the "new" psychology, and his younger readers will no doubt miss something of what they may naturally expect in a book published in the year 1918. But they cannot complain that Dr. Ward does not know of the newer developments. The text, and especially the foot-notes, give abundant evidence of his familiarity with the most recent tendencies. He disregards them because he dislikes them, and because he cannot accept the newer "scientific" writers on the subject as being psychologists at all. Freud does not occur in the index, and when we encounter him in a foot-note it is merely a rebuke to "the Austrian neuropathologist, S. Freud." This we can understand; but it is less easy to forgive the neglect of experimental psychology. Surely Dr. Ward's colleague, Dr. C. S. Myers, might be admitted into the sacred circle of professional psychologists. On the other hand, the older critics will in these pages get what they want. It will warm their hearts to note the prominence given to Sir William Hamilton, of whom the newer men have little knowledge. To tell the truth, Dr. Ward, with all his objections to metaphysics in psychology, is no mean metaphysician himself, and cannot well keep clear of this aspect of his subject. Then, too, he has quite a Socratic belief in the efficacy of clearly defined terms as a means of securing clearness of thought. He tells us that half the difficulties in the way of accepting the law of continuity "are due to defective terminology," and throughout the whole volume he strenuously strains after accurate definition. As a consequence he not infrequently becomes prolix, but the serious student will never find him dull.

In the space at our disposal it is impossible to do justice to Dr. Ward's psychological doctrine. This is the less to be regretted that a detailed criticism would at this stage be almost impertinent. His work has become a classic, and should be treated accordingly. Psychologists who are now elderly have always regarded him as one of their most valued leaders, and the newer generation cannot do better than to master this volume before they set out on that newer psychology which at present lies so hopefully before them.

THE ENGLISH POETS.

The English Poets. Selections with Critical Introductions. Edited by T. HUMPHRY WARD. Vol. V: *Browning to Rupert Brooke*. (10s. 6d. net. Macmillan.)

"Extracts! A pitiable method!" pronounced the great Napoleon; "young people have time to read long books and the imagination to seize all the great things." There is so

much that is sound in this judgment that we may be tempted to forget that it is only a half-truth. Anthologies are mischievous if we misuse them to form our opinions upon insufficient evidence, but it may well be questioned whether the average man appreciates their real educational value. That value is certainly not least for those who know their poets already. To observe which of Tennyson's poems were chosen by an accomplished critic like the late Sir Richard Jebb, when his selection was confined to sixty pages, and to attempt to discover his reasons for choice or rejection, is a first-rate lesson in criticism. Everybody knows Matthew Arnold's belief in the great poem and the great line as a touchstone of taste; and in an educational periodical it is worth while to set on record that so wise an educator as the late F. H. Dale used to say that he thought no more useful work could be done for English literature than a series of anthologies made by discerning judges on the lines of Arnold's selections from Wordsworth, Byron, and Shelley.

For this fifth volume of a famous work it is sufficient praise to say that it fully maintains the critical quality of its four predecessors. For most readers of poetry it will possess an enhanced interest, because reputations are less definitely fixed as we come nearer to our own day, and the opinions of acknowledged authorities are proportionately more valuable. Those whose memories go back over forty years will find a certain melancholy amusement in noting how quickly a popular favourite who never won the franchises of the best judges drops out. The Saturday Reviewer of the early eighties who distinguished between "Mr. Lewis Morris of Penbryn" and "Mr. William Morris of Parnassus" was anticipating—and perhaps assisting to mould—the judgment of posterity. One faded reputation is here revived—Alexander Smith; his prose essays, too, are enjoying a new vogue; but the passages which Mr. Drinkwater selects contain nothing that convincingly explains his inclusion. The puzzle is the greater because Smith died in 1866, and his proper place would have been in Vol. IV. To that volume, by the date of their death, belonged D. G. Rossetti and O'Shaughnessy, whom one instinctively looks for here among their contemporaries. The regrettable omissions are wonderfully few; but we could have spared the extracts from Aubrey de Vere's "May Carols" for the sake of his beautiful sonnet, "Count each affliction," and his perfect lyric on "Sorrow," which are unaccountably absent; and we should have welcomed an example of Myers's quite individual use of the heroic couplet. Among the critical pleasures of the volume we may mention Mr. Mackail's essay on Morris, Mr. Bailey's on Meredith, and Sir S. Colvin's on R. L. Stevenson. One would like to see this collection published at half-a-crown and sold by the hundred thousand.

MODERN EDUCATIONAL SYSTEMS

Comparative Education: Studies of the Educational Systems of Six Modern Nations. Edited by P. SANDIFORD. (8s. 6d. net. Dent.)

In this attempt to meet one of the needs of these times of reconsideration and reconstruction, Dr. Sandiford, formerly of the University of Manchester and now of the University of Toronto, has brought together into one volume a set of studies, undertaken by himself and four other contributors, of the educational systems of six modern nations. The editor himself deals with England and Canada; Dr. W. F. Russell, of Iowa, with the United States; Dr. Kandel, of Columbia, with Germany; Mr. A. H. Hope, of the Roan School, Greenwich, with France; and Dr. Foght, of the United States Bureau of Education, with Denmark. The name of each contributor is well known to all students of "comparative education," the term by which such studies as these are known in America, and are coming to be known in England. The materials contained in the volume, except so far as they are brought up to date at the time of going to press, exist of course already in scattered books and reports. Dr. Sandiford's idea is to bring the materials together in a handy form, and to secure such a degree of uniformity in aim and treatment as will really help

the general reader in making comparisons between the different countries.

Each country, we are told, has been selected with a definite end in view. This is obviously the case with Canada, "a country building up an educational system under pioneering conditions of development," and Denmark, chosen for its "conscious adaptation of an educational system to the needs of an agricultural community." As for the four greater countries, though of course their varied political and social characters strongly affect their educational systems, it is difficult to see how any of them could have been omitted.

The mass of detail packed into the book necessarily causes it to partake of the nature of a work of reference. But this is by no means all. Witness, for example, the clear and interesting pages devoted to the tragically complete subjugation of education to the State in Germany, and the equally interesting estimates by Mr. Hope of the strong and weak features of the various parts of the French school system. Such a book, again, could not possibly be made complete. Dr. Russell, for instance, has had to exclude details regarding the kindergarten, private schools, and colleges and Universities in his account of education in the United States. But in the main we have no doubt that the choice of material has been wisely made. It is naturally the common fate of books of the kind to be somewhat out of date even before they get into the hands of the public, and in the present case this is eminently so as regards England, where educational events have come, and are coming, thick and fast. But the book has a useful purpose to fulfil, and we hope it will reach the hands of very many of our responsible teachers and officials.

EXAMINATIONS.

Examinations. By P. J. HARTOG. (3s. 6d. net. Constable.)

Mr. Hartog has had very special opportunities to study the working of examinations, and has taken full advantage of them. The result is a little book that is of the highest importance at the present time of educational flux. The treatment is suggestive rather than exhaustive. Much more could be written on the subject, but within the desirable limits he has set for himself it is difficult to see how Mr. Hartog could have improved on what he has given us. He is concerned more with the elucidation of his subject than with the credit due to his share in dealing with it. He has laid under contribution the few writers who have preceded him in this neglected field, but he has used all his authorities in such a way as to give new life and meaning to their contributions. At first one is tempted to think that the section on "The Theory of Examinations" is the most valuable in the book, as it is certainly the most original. But reflection shows that perhaps the admirable exposition of the whole subject with its resulting clarification of thought has done better service than any mere addition of new matter. To the superficial reader there will be an appearance of discursiveness and lack of co-ordination, particularly in view of the large number of notes that are found in a sort of appendix. But no one who gives the book the fair play of careful reading can fail to see that it forms a real whole in which the various parts have an organic connexion with one another.

Mr. Hartog's main plea is that those responsible for examinations should make up their minds on the important point of what they would be at. Teachers too often take examinations as a part of the nature of things, and do their best to minimize their evil effects. The new demand forcefully set forth in these pages is that examining bodies must be brought to the bar of professional criticism and made to justify their existence. We teachers are not without blame in the matter, for we sometimes treat examinations as an end instead of merely as a means; but we are not so bad as the examiners, who sometimes deliberately say of a candidate that he "is better than his marks." If we ask, "Why, then, do you not give him better marks?" the answer is that the conditions of examination prevent this; in other words, the examiner is merely a cog in a machine. It is the machine, rather than the cogs, that is arraigned in this book, and examining boards as well as

Government departments will be well advised to attend to what is here presented to them. Mr. Hartog's work was not without effect when parts of this book appeared in periodical literature. It is an open secret that the Royal Commission on Civil Service Appointments and Examinations was not unconnected with a certain lecture at the Royal Society of Arts in 1911. That the Commission had not fully discharged its reference is admitted. The present little book may do something towards causing new activity; but, if nothing further is done in the immediate future, we hope that Mr. Hartog will carry out his half-promise of producing a more elaborate stimulant.

CLASSICS.

- (1) *A Latin Reader*. With Notes and Vocabulary by A. PETRIE. (3s. 6d.) (2) *Roman History, Literature, and Antiquities: an Introduction*. By A. PETRIE. (2s. The two bound together, 5s.) (Oxford University Press.)

Mr. Petrie presents us with two books admirably designed for their definite purpose, viz. "for students preparing for examinations in which no special text is prescribed for study." If such books must be, Mr. Petrie's deserves to be recommended. In his "Reader" he has taken fourteen of the best Latin authors, has given representative and not too short extracts from them, has prefaced each author with an explanatory note, and has added grammatical notes and vocabulary at the end. The manual on Roman History, &c., is to be used with the "Reader" as a general background or atmosphere. It is well done and is illustrated, but we think Mr. Petrie might by cross reference have brought the two books into closer and more real connexion. To return to the "Reader," we have in it two sections, a Junior and a Senior. The Junior has forty pages and is sadly overweighted by the Senior, which has 169. The only poet in the Junior is Phaedrus. It may be a matter of opinion, but there should be passages from Virgil or Ovid within the scope of any student, however junior, who can read extracts at all, and such a student ought to be brought into contact with the best Latin poetry at an early stage. On page 1, line 6, *corum* should be *eorum*; on page 228, *iudicibus* is not for *iudicibus*, but is dative, as the late Prof. Wilkins took it; on page 298, why *perhaps* ethic? It either is or is not; the notes on Propertius (page 323) from line 27 are wrongly numbered; page 341, vowels are not long by position; and page 402, *surreptum* comes from *surripio*, not from *surrepo*, which has no supine.

The Syntax of High-School Latin. Edited by LEE BYRNE.

Revised Edition. (75 cents net. University of Chicago Press.)

This does not pretend to be a contribution to Latin studies, but to scientific procedure in education. As an exercise in the presentation of statistics it is not without value; it is full of elaborate tables and graphs which remind us of nothing so much as the German concordance to the works of Goethe with information upon the number of times the word *und* occurs in his writings. But we hope that even in America they don't really teach Latin on such dreadfully scientific lines as are here indicated! Latin is a language, and should be taught as such; it seems strange to find this admitted even in the introduction to this "scientific" work, when in the section on reading and translating it is insisted that the Latin must first be read before it can be translated. *Verbum sapientiae*—but there are not many more.

The Sibylline Oracles. Books III-V.

By the Rev. H. N. BATE. (3s. 6d. net. S.P.C.K.)

This is one of the series of "Translations of Early Documents," which provides students of Christian origins with handy textbooks unencumbered by commentary or elaborate notes. In a scholarly introduction, forty pages in length, Mr. Bate deals with the Sibylline tradition in Greece and Rome and with the doctrine and eschatology of the Jewish-Christian oracles. In addition to those for whom the series is primarily intended, classical scholars will be interested in things such as the legend of the return of Nero, and we recommend the book to the general reader as a sidelight upon the fascinating subject of parallels between pagan and Christian traditions.

- (1) *Selections from Matthew Paris*; (2) *Selections from Giraldu Cambrensis*. Both arranged by Dr. C. A. J. SKEEL. (3) *Libri Sancti Patricii*. Edited by Dr. N. J. D. WHITE. (The first two, 9d. net each; the latter, 6d. net. S.P.C.K.)

A cheap paper reprint in "Texts for Students" of the writings of medieval monks and others likely to interest students of church history and also the general student of medieval history. There is a short, but adequate, introduction to each.

EDUCATION.

The Twin Ideals. By JAMES W. BARRETT. (Lewis.)

The twin ideals are (1) the organic union of the Commonwealth and (2) the effective education of all adolescents. The sub-title of

the whole is "An Educated Commonwealth." We are not sure whether Dr. Barrett, as an Australian, means the antipodean Commonwealth or the whole of the British Empire. The contents of these two handsome volumes certainly are concerned with Australian affairs, but the fact that they are published in England indicates that their author makes a wider appeal than to his fellow-Australians. It is quite clear that he has himself some doubt about the wisdom of publishing at all, for in his preface he explains that a time will come when Australian development will be examined historically, and that records like his will then be of value, but that in any case the view-point of a man who has lived through the controversies he treats is in itself of importance. It is doubtful, however, whether this wholesale reproduction of magazine and newspaper articles, letters to the editor, and reports of lectures, is a wise spending of labour and paper in times like these. Dr. Barrett obviously feels a little doubtful on the matter himself, for he confesses that "the varied nature of the contributions to this work makes some personal explanation necessary." The explanation takes the form of a catalogue of the author's "diverse positions," each position demanding a different view-point. We must admit that in the "mixed feeding" provided in these volumes there is much that is interesting and instructive, but we are doubtful whether their perusal would greatly benefit any who are not specially concerned with the Australian Commonwealth of Victoria.

Manuscript Writing and Lettering. A Handbook for Schools and Colleges, showing the Historical Development and Practical Application to Modern Handwriting of several Manuscript Styles derived from Ancient Roman Letters. Fully Illustrated. By an EDUCATIONAL EXPERT. (5s. net. John Hogg.)

The last four years have been, almost of necessity, devoid of pedagogic adventure. But there is one notable exception: a movement of reform in handwriting is almost contemporaneous with the war, and so widely has the movement spread that more than half the schools in London, and many others in the provinces, are affected by it. Briefly, it consists in a return to the original sources from which both our print and our script are derived—a return which is explained and justified in the book under review. Indeed the book is likely to become, and is well worthy to become, the standard textbook of the new movement. It gives a lucid and scholarly account of the development of handwriting from Roman times, of the essential forms of the letters now in use, and of the relation between a formal book hand and cursive writing; it gives practical advice on the materials of the art, the methods of practice, the spacing of letters and the illumination and decoration of texts. The illustrations drawn from ancient manuscripts (some of them reproduced from Mr. Edward Johnston's well-known book) are very beautiful, as indeed are some of the specimens given of manuscript writing produced by school children. Enthusiastic teachers of the new (or rather the old) penmanship will be glad to possess this book.

Manchester and the Movement for National Elementary Education (1800-1870). By S. E. MALTBY. (10s. 6d. net. Manchester University Press.)

It is a sure instinct that has led several competent writers in recent years to devote themselves to the history of elementary education in this country during the nineteenth century. With all its faults, the century did most of whatever has been done for the education of the children of the masses, and the forward movement of the new century had to begin where our Victorian forerunners finished. In fact, there can be no genuine understanding of the present position, and therefore no really intelligent attempts at further progress, without an adequate comprehension of the last century. Practical reasons, therefore, as well as reasons of local patriotism, justify the appearance of Mr. Maltby's minute study of the conspicuous part played by Manchester. Lancashire was fated to become the scene of some of the worst evils in connexion with child-labour and the degradation of children. But the other side of the case is the devoted efforts of public-spirited Manchester men to lessen the evils which they were unable to avoid. Some of those men were unknown to fame in a wide sense, but it is in the interests of veracious history no less than of fair play that their names should be rescued from oblivion. We should add that Mr. Maltby has done more than this, for some of his chapters take the national rather than the local view, and will be found of quite general interest and value. His book is a worthy contribution to the excellent educational series of the Manchester University Press.

The Young Wage-Earner and the Problem of his Education. Essays and Reports. Edited by J. J. FINDLAY. (3s. 6d. net. Sidgwick & Jackson.)

This collection of papers and reports, contributed by members of the Uplands Association, is a timely production, and ought to receive a welcome from those who are practically interested in carrying out the provisions for continued education made in the Education

Act. Prof. Findlay makes a brief statement of the conclusions to which he and his colleagues have been led, and these conclusions are then elaborated in a series of fine essays of a general character, followed by a number of reports on specific matters illustrative of the general positions taken up. The reports are characterized by that liveness and actuality which one connects with first-hand observation and experience.

Ethics of Education. By B. DE NORMANN and G. COLMORE. (2s. Theosophical Publishing House.)

The authors of this book, whilst agreeing that current administrative changes, including nursery schools and schemes for continued education, are of real importance, point out that, if these changes are to be really progressive, the spiritual attitude towards education of those who control them must also be changed. The authors approve of the ideals represented by such names as Mme Montessori, Mr. Holmes, and Prof. Dewey. But they believe that the "philosophy of life" which Mr. Holmes desiderates as the true basis of education has not yet been constructed, and the purpose of this book is to formulate such a philosophy by studying education "in the light of the Ancient Wisdom."

Present-Day Applications of Psychology. By C. S. MYERS. (1s. net. Methuen.)

This little book, which presents in permanent form two lectures delivered at the Royal Institution in April last, discusses the applications of modern psychology with special reference to industry, education, and nervous breakdown. The name of Dr. Myers, the leading experimental psychologist of this country, is a sufficient guarantee of excellence of treatment. Though more space is given to industry and nervous breakdown than to education, yet the booklet should be of great interest to progressive teachers. A marked feature of the lectures is the number of striking instances that are given by way of illustration.

Learners as Leaders. By H. SPENSER WILKINSON. (1s. 6d. net. Manchester University Press.)

The Manchester University Press has done well to issue in book form the address delivered by Prof. Wilkinson at a memorial service held in April last for members of the University who have fallen in the War. As an old student, and later as lecturer in military history, at Queen's College, the Oxford professor was in entire sympathy with the *genius loci* in speaking to his Manchester audience. But the address has more than a local reference, because of the wise things the lecturer had to say about ideals of University education.

Our Schools in War-Time—and After. By Dr. A. D. DEAN. (6s. net. Ginn.)

This book should prove very interesting to any one who desires to know something of educational thought in America during the War. The writer truly says that at the beginning of the War England nearly wrecked her schools, and is now repairing the mistakes of hurried action. We should add that she is doing a great deal more than that. America, which had ample opportunity of profiting by our mistakes, could from the first use the War to make better schools. Now, says Dr. Dean, we are serving for the Red Cross; later we shall serve for institutions in our community. Now we are to teach patriotism and thrift because the nation needs them; later we shall teach them because they are essential in themselves. Now we have extension courses in economical cooking as a War measure; later we shall have them as a home measure. Now also is the time for evaluating our school subjects in terms of real national needs. All that we are doing to make the world safe for democracy may be effectively used after the War to make democracy safe for the world. We must see that all possible good shall come out of the terrible evil of war. Such is the note struck by Dr. Dean's book, from which we in this country may well draw inspiration.

GEOGRAPHY.

Seaways of the Empire. By A. J. SARGENT. (7s. 6d. Black.)

In this volume Prof. Sargent describes the great trade routes of the world with special reference to British shipping. The analysis of the trade along the various routes is particularly instructive, and reasons are suggested where there is a marked difference between the outward and homeward tonnage. The chief value of the book is that the investigations are suggestive rather than conclusive; the author presents the difficulties of the problem, he then offers certain explanations, but leaves the student to find other determining factors. The discussion of the advantages and disadvantages of the routes *via* Suez and Panama respectively exemplifies the method pursued in the various chapters. The distance factor is thoroughly investigated, and it is then suggested that the length of voyage between coaling stations, the price of coal, availability of cargo, weather conditions, and other factors must be taken into account when the course of a ship is being decided upon.

This book, dealing with seaways, cargoes, and ports, might be used with advantage as a supplement to the textbooks on commercial geography which deal with production rather than with transport. For purposes of comparison, the author states the net register tonnage of ships, the figures being given in million tons, and in most cases the statistics are confined to the year 1912. Instead of incorporating the figures in the text it would have been clearer if the shipping statistics had been presented in tabular form. The figures for one year are apt to be misleading, as in the case of coal exported from Great Britain to the Canary Islands in 1912; the author points out that the quantity was twenty-five per cent. above the normal. Averages for tonnage, quantities, and values for a period of years should be given in order that the student may examine the figures for a particular year in relation to the normal or average quantities. In the six map diagrams the volume of trade is shown by a series of parallel lines, each line representing so many tons. This type of illustration is more suited to an article in a popular magazine than to a book intended for students.

The World We Live In. Edited by GRAEME WILLIAMS. (The Waverley Book Co.)

Earlier volumes have already been reviewed, and the high standard of the first is maintained in the concluding volume, which deals with South America, Europe, and Asia. With the exception of one chapter, the section on South America is the work of Mr. W. H. Koebel, his chapters on flora and fauna being particularly interesting and well illustrated. The chapters on Europe by Prof. Grenville Cole are of great interest; they contain vivid descriptions of scenery and its relation to rock structure, and are written from first-hand knowledge acquired through much travelling on the continent. Teachers will find this section immediately useful. The chapters on Asia are by Prof. Arthur Holmes and Mr. R. J. Finch. Much detailed information is given and the maps showing lines of communication, such as the navigable waterways of Siberia in relation to the Trans-Siberian Railway, give information which is not easily obtainable elsewhere. These volumes would be of value in any teachers' or school library.

HISTORY.

An Outline Sketch of English Constitutional History. By G. B. ADAMS. (7s. 6d. net. Yale University Press.)

It has been said that no one ought to write a short book on any subject until he has written—or, at any rate, accumulated the materials for—a large one on the same theme. Prof. G. B. Adams, of Yale University, has read and written much on the English Constitution. He is acknowledged on both sides of the Atlantic to be an expert authority upon many problems of legal and constitutional history. The result of his wide erudition is seen in the fact that the brief sketch which he here presents moves with easy mastery through the complicated details of the story of the development of English institutions, reducing them to order and infusing them with life. It is a remarkable achievement to have compressed the whole narrative into some 50,000 words; yet the sketch gives no sense of undue condensation or of incompleteness. Much, of course, is omitted. Local institutions, for instance, are hardly touched upon. But unity is given, and the omissions are explained, by the fact that the book has been written for American students in order primarily "to show how modern liberty came to be what it is, and what foundations our institutions have in the past history of the race." English students, no less than American, will profit from a perusal of this very able sketch.

Evolution of the Dominion of Canada. By EDWARD PORRITT. (Harrap.)

We cordially welcome a new series of "Government Handbooks," edited by Dr. D. P. Barrows and Mr. T. H. Reed. Both the editors are professors in the University of California; but both are also practical men—the one at present a colonel in the American army, the other the city manager of San Jose in California. The handbooks are intended to combine instruction in political theory with information concerning the actual working of existing political institutions. The first volume of the series, now before us, gives an exhaustive account of the evolution of the Dominion of Canada, with a full description of the operation of its present federal constitution. It is a lucid and businesslike account, unadorned with rhetoric, but full of valuable information for students of comparative politics. Two other volumes in the series relate to Switzerland and Germany respectively. Further volumes announced will deal with American Dependencies, France, Britain, Japan, &c.

Greek Political Thought: Plato and his Predecessors.

By ERNEST BARKER. (14s. net. Methuen.)

Twelve years ago Mr. Ernest Barker, of Oxford, published an im-

MACMILLAN & CO., Ltd., ST. MARTIN'S STREET, LONDON, W.C. 2.

portant book entitled, *The Political Thought of Plato and Aristotle*. It was at once recognized as a work of remarkable erudition and insight, and it has maintained its place as an indispensable authority for all students who are seriously investigating ancient political ideas. A new edition having been called for, Mr. Barker was engaged upon the task of revision when the War broke out. Official duties have prevented the completion of the task, and the volume before us represents but one half of it. The revision of this half, however, has been so drastic that the half is as big as the former whole, and there is so much new matter that Mr. Barker has quite rightly changed the title and issued it as substantially a new book. The study of the political conceptions of the Sophists and of Socrates is much fuller than it was before; Plato himself is treated with more exhaustive detail; above all, there are new and important chapters on the Greek City State. This is undoubtedly a great book. It confirms Mr. Barker's position as one of the leading political theorists of our day. We eagerly anticipate the promised second volume on Aristotle and his Successors.

A First History of England. By M. W. KEATINGE.
(3s. 6d. Black.)

Dr. Keatinge is well known as an able advocate of the source method of teaching history in schools. That method, of course, is applicable only to the more advanced pupils. Dr. Keatinge has evidently recognized the need of an elementary textbook which shall prepare young children for the more difficult inductive studies of later years. The book before us provides what is required. It lays stress on the social and economic aspects of history, and it supplies a series of 130 pictures drawn from contemporary originals which are intended to serve as the basis for observation and description. It is exceedingly attractive and interesting.

The French Revolution in English History. By P. A. BROWN.
(7s. 6d. Crosby Lockwood.)

Mr. P. A. Brown, of New College, Oxford, and Lecturer in Durham University, was one of the finest and most promising of the younger generation of historians. Unhappily, he was also one of those whose lamentable fate it was to perish in the War. And yet, being dead, he speaks, and speaks perhaps as effectively and powerfully as if he had lived a long life in normal times. On one hand, his memory endures with those who knew him, and its influence is shortly to be extended by means of a biography which is

in process of preparation. On the other hand, he has left this account of the effect of the French Revolution upon England, which shows the high quality of the work of which he was capable. Although unrevised, it reveals remarkable maturity of judgment, width of reading, and grace of style. It is a notable contribution to the history of political ideas.

MEDICAL.

Dent's New Medical Dictionary. By W. B. DRUMMOND.
(10s. 6d. net.)

This is a most useful and comprehensive work, and should have a wide circulation as a book of reference. Dr. Drummond has written it for the lay public, who are fortunate in being given the information they require in such an able and scientific way. Many of the articles are most interesting reading, and the author has made an excellent selection of topics that are before the public at the present time. We would mention especially those on Trade Diseases, Sanitation, Food, and Flies and Disease. The articles on modern methods of treatment and the latest advances of medical knowledge give all the necessary information, and the plates illustrating them are remarkably good. We fear that Dr. Drummond's pious hope that the ordinary person over forty is a physician and not a fool is often proved to the contrary, and it might have been wiser in dealing with potent remedies such as adrenalin and bromides to have withheld the dose. The advice given under the heading, "Appendicitis: Treatment," is open to criticism, if Dr. Drummond means "surgeon" in the technical sense. The patient's physician is surely the person to decide whether an operation is necessary. But we can find little to criticize in this admirable dictionary, which should be useful to a wide range of readers.

The Edinburgh School of Surgery before Lister.
By ALEX. MILES. (5s. net. Black.)

This admirably written account of one of the most famous schools of surgery in the United Kingdom will naturally appeal primarily to those members of the profession who look to Edinburgh as their Alma Mater, and it will help them to realize of how great a tradition they are the heirs. But the story is one of general interest for all those who love to trace the growth of a great science through the centuries. The history of the Edinburgh School is traced step

- Book V, pp. xx + 288, with 24 plates,
 Cloth flush (school edition) 4s net
 Cloth limp 5s net
 Cloth boards, uncut edges, with bookmarker,
 (Library edition) 6s net

READY IN JANUARY—

- Book II, pp. xvi + 248, with 20 plates
 Book III, pp. xvi + 236, with 20 plates
 Book IV, pp. xviii + 286, with 24 plates

The editor's aim has been to give young readers the pleasure that is also a profit—to afford them the varied excitements (and incitements) of miscellaneous reading, to introduce to their notice certain poems, passages, books and writers, great or famous, or merely entertaining, and to associate with these a few pictures, drawings, and engravings of widely differing schools and periods. The variety of the entertainment is part of the plan, and the range of the selection has been made very wide. Modern and even contemporary work has been drawn upon.

The Story of the People of Britain. In four books. Crown 8vo

- Book I, 55 B.C.—1485 A.D. By MARY SARSON. With 54 Illustrations. 2s
- Book II, 1485–1688. By MARY SARSON. With 58 Illustrations. 2s 3d
- Book III, 1688–1815. By LUCY HANSON. With 62 Illustrations. 2s 6d
- Book IV, 1815–1914. By LUCY HANSON. With 67 Illustrations. 2s 9d

"These excellent primers of English history are notable for fine type, attractive contemporary illustrations, and clarity of style. The use of ballads and contemporary documents gives, in the earlier chapters, verisimilitude to the text. The story of the successive centuries brings out something at least of the actual life and customs and manners of the people, and makes our history a living thing."—*The Times*

Milton: Areopagitica. With a Commentary by Sir RICHARD C. JEBB, and with supplementary material. Extra fcap 8vo. 3s net. Pitt Press Series

The Commentary on Milton's *Areopagitica* here printed (Introduction, Analysis, and Notes) was privately printed by Sir R. C. Jebb for the use of a course of lectures given at Cambridge in the Lent Term of 1872. Mr Verity has compiled a short appendix of comments, drawn mainly from his own editions of Milton published by the University Press, and has added the brief *Life*.

"Sir Richard Jebb's introduction, analysis, and notes—dealing especially with the numerous classical allusions—have the clarity and precision to be expected from the great scholar, and the new edition of the famous tractate may be warmly commended."—*The Spectator*

Lord Macaulay: History of England.

Chapter III. The State of England in 1685. Edited by W. F. REDDAWAY, M.A. Extra fcap 8vo. 2s 3d net. Pitt Press Series

"The value of the volume for pupil teachers and senior scholars in secondary schools will at once be recognized by every teacher."—*The Schoolmaster*

"Schoolboys could not have a better guide to this famous chapter than Mr Reddaway; his notes are few, up-to-date, and judicious."—*The Cambridge Review*

Cambridge Essays on Education. Edited by A. C. BENSON, C.V.O., LL.D., Master of Magdalene College, with an introduction by the Right Hon. VISCOUNT BRYCE, O.M. 7s 6d net

"This important collection of essays on education strikes the right note at the right moment. It is an appeal, from the most diverse minds, to the nation to make education in the noblest sense a national possession."—*The Times Educational Supplement*

Elements of Religion and Religious Teaching. By E. T. CAMPAGNAC, Professor of Education in the University of Liverpool, formerly H.M. Inspector of Schools. Crown 8vo. 3s 6d net

"The book is one of great distinction in subject matter and in style. Every teacher who reads it will feel that he is raised to a serener atmosphere than used to be in the old type of writing—for and against—religion, in the teacher and in the school."—*The Journal of Education*

The Port-Royalists on Education. Extracts from the Educational Writings of the Port-Royalists. Selected, translated, and furnished with an introduction and notes, by H. C. BARNARD, M.A., B.Litt., sometime Senior Hulme Scholar of Brasenose College, Oxford; Author of *The Little Schools of Port-Royal*, &c. Crown 8vo. 7s 6d net

"The Port-Royalists merit the attention of all who are interested in the history of European civilization; while those whose mission it is to teach the young will find their theories and methods endlessly suggestive."—*Extract from the Preface*

The Book of Deuteronomy. In the Revised Version. With introduction and notes by Sir GEORGE ADAM SMITH. 6s 6d net

With the publication of the Book of Deuteronomy, the Old and New Testaments in the Cambridge Bible for Schools are completed.

"Those who have studied Sir George Adam Smith's brilliant commentaries on the prophets will welcome a volume from his pen upon the Book of the Law. They will find the same fine scholarship, the same enthusiasm for his subject, which they have been taught to look for in all this writer's previous work. . . . We congratulate the editor of the Cambridge Bible for Schools and Colleges on an addition to the series which is far above the average text-book in importance."—*The Church Times*

Translation from French. By R. L. G. RITCHIE, M.A., Lecturer in French in the University of Edinburgh, and JAMES M. MOORE, M.A., Rector of the Madras College, St. Andrews. Demy 8vo. 6s 6d net

"The authors have followed up their fine 'Manual of French Composition' by an equally successful book on the sister art of translation from French. We cannot sufficiently commend the manner in which they have performed their work. The niceties of French translation are subtly explained. The principles of the art are expounded in great detail and lavishly illustrated. Numerous passages, representative of many schools, are given, the difficulties discussed with care, and renderings, revealing a delicate appreciation of the beauties of both languages, laid before the reader. The book deserves, and is certain to win, the greatest possible degree of success."—*The Scottish Educational Journal*

CAMBRIDGE TRAVEL BOOKS

The North-West and North-East Passages, 1576-1611. Edited by P. F. ALEXANDER, M.A. With 18 maps and illustrations. 3s net

"Each story has been written by one of the exploring party, and the spelling and punctuation have been modernised wherever necessary, though archaic words have been retained, and are explained in notes. This book should be a valuable addition to the school geographical library, more especially on account of the illustrations, which are historically valuable."

School World

The Earliest Voyages Round the World, 1519-1617. Edited by P. F. ALEXANDER, M.A. With 20 maps and illustrations. 3s net

"Excellent editing, printed, illustrated, mapped, and bound, and a well of English undefiled. The introduction clearly traces the travel-history of this great period of discovery, and there is a useful list of important dates in the whole history of discovery."

Times

The Discovery of America, 1492-1584. Edited by P. F. ALEXANDER, M.A. With 16 maps and illustrations. 3s net

"Another volume of the excellent *Cambridge Travel Books*, which ought to be in every school. . . . Mr Alexander's introduction and notes and the illustrations are all that we could desire."

Spectator

Stories of Exploration and Discovery. By A. B. ARCHER, M.A. With 21 maps and illustrations. 2s 6d net

"As an adjunct to the history or the geography lesson the book is equally valuable. . . . In the matter of selection sound judgment has been shown; hence the little volume admirably serves to present a continuity of effort, a sequence of progress. No pupil, who has read through the account, will come away from his task feeling wearied; he will indeed be led to explore himself among the books mentioned in the excellent 'reference and study' list appended to the book."

Scottish Geographical Magazine

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

by step, from the days of the barber-surgeon of the sixteenth century until the advent of Lister; and it is shown how the two rival sections of the Edinburgh School—the professional and the extra-mural—acted and reacted on each other to the advantage of both. The life-stories of the most famous of the surgeons who lived "before Agamemnon," the two Bells, Fergusson, Liston, James Syme—brave men indeed they were—is told with lucidity and vividness, and the accounts given of some of the most striking of their operations enable one to realize how great the courage and skill of these men were and to understand how their doughty deeds enhanced the fame of the great school to which they belonged. A word of praise should be given to the author for the excellent illustrations and portraits with which he has enriched his book.

MISCELLANEOUS.

Who's Who, 1919. (30s. net. Black.)

This year's issue of this indispensable work of reference contains about 27,000 biographies, and it runs to some 2,760 pages. Due prominence is given to educational work by the inclusion of notices of many distinguished head masters, head mistresses, and educational administrators. A copy of the volume might appropriately find a place in every school library. If the editor could persuade some of the contributors to write more briefly, it would be possible to give all the essential information, and yet to check the inordinate growth of this welcome annual.

Man and Machine Power. By Captain J. W. PETAVEL.
(University of Calcutta.)

Under the above title, which has no apparent relation to the contents of the book, Captain Petavel, an enthusiastic reformer and reconstructor of society, advocates the establishment of educational colonies for the solution of the problem of unemployment, for the increase of industrial productivity, and for the calming of labour unrest. These educational colonies in some respects resemble the socialistic settlements and the co-operative commonwealths which had such short and sad careers in the nineteenth century. But Captain Petavel is aware of some of the causes of their failure, and in his scheme he proposes to avoid them. He suggests that the first experiments in the new organization of industrial society should be made in India, whose economic conditions he regards as grave. Captain Petavel's scheme, though advocated with good sense and moderation, falls into line with modern Syndicalism, and is clearly intended to be independent of, if not antagonistic to, the State.

Nationality and Government. By A. E. ZIMMERN.
(10s. 6d. net. Chatto & Windus.)

This volume is made up of fourteen separate essays, lectures, or articles written by Mr. Zimmern during the past five years. All but one belong to the period of the War, and all, without exception, deal with political and educational problems which the War has rendered prominent. Although the essays are externally unrelated to one another, there is an internal unity which makes them more of "a book in the true sense of the word" than at first sight might appear. They all of them treat of some aspect or other of one or both of the great motive forces in modern international politics—viz., nationality and democracy. On each of these themes Mr. Zimmern has many things to say that well deserve attention. He is an acute and profound thinker; he is a scholar with a wide range of knowledge, and he is master of a lucid and epigrammatic literary style. His view of nationality is by no means that which is current at the present day. He frankly confesses that it has been to some extent determined by the fact that though he himself is an English citizen, entirely loyal to the British State, he is by nationality a Jew filled with ardent devotion to the ideals of his people. Hence he strongly contends that nationality is a spiritual bond of union, and that it should be kept outside the sphere of politics. He has some fine things to say concerning the spiritual aspects of nationality, but he by no means carries conviction when he implies that people who feel themselves bound together by this spiritual tie should not seek political autonomy. On the subject of democracy the most impressive of Mr. Zimmern's arguments are those in which he urges the extension of the principle of self-government from the sphere of politics to the sphere of industry. Mr. Zimmern's book is one which should be read as a whole, and should be read with care, by all who are interested in the political and social questions of the day.

The University of Chicago War Papers. Nos. 1-5. Each about 20 pages. (5c. each. University of Chicago Press.)

These scholarly and restrained War pamphlets are issued under the auspices of the Publicity Committee of the University War Service. Their purpose is to inform the American people concerning the causes of the War, the principles at issue, and the characteristics of the belligerent nations. To Britons, of course, all this seems to be a tale long since told. To multitudes of Americans, however, the information is new and necessary. More-

over, even Britons, if they are not too much engrossed in other war problems or after-war problems, would benefit by a perusal of these well written and succinct statements of essentials. The following are the titles and authors of the five papers published up to the present:—(1) "The Threat of German World-Politics," by President Judson; (2) "Americans and the World Crisis," by Prof. Small; (3) "Democracy the Basis for World-Order," by Mr. Bramhall; (4) "Sixteen Causes of the War," by Prof. McLaughlin; (5) "The War and Industrial Readjustments," by Prof. H. G. Moulton.

The Future of Democracy. An Address by Lord HALDANE.
(1s. net. Headley.)

This address is a rather pathetic appeal delivered, under the auspices of the Workers' Educational Association, to the rebels of Coventry. Its title is not particularly happy, for the address has but little to say about either democracy or the future. It is, indeed, rambling and discursive; defective in form and lacking in leading idea. It treats of the War, and of the British determination to secure victory; it discusses the principle of equality, the functions of the State, the importance of scientific education, the uses of the aristocracy, the duties of citizenship, and the spiritual aspect of politics—all these things and many others also by the way; but none with any degree of thoroughness. It might be called by almost any title; but perhaps *Obiter Dicta* would suit it best. Its most striking characteristic, however, is not what it says, but the wheedling way in which it says it. The tone is most painfully apologetic, as of a member of the Parlement of Paris pleading for his life before the Jacobin Club. But the pleading, though pathetic, is hopeless. "You will put us poor Peers out of political existence," Lord Haldane sadly predicts. "We are going out of existence," he reiterates. He hopes against hope that a new scientific aristocracy may arise to save the nation from disaster. He appeals to the rebels of Coventry to think of their civic duties.

SCIENCE.

Everyday Physics: a Laboratory Manual. By JOHN C. PACKARD.
(4s. 6d. net. Ginn.)

The author of this book is a science master in the High School at Brookline, Massachusetts, and has endeavoured to produce a course in physics suitable for preparation for college and to the requirements of everyday life. Besides working through the experiments included in the volume, the pupil is expected to gather information outside his school work from trade catalogues, textbooks, practical men at work in his vicinity, &c., and to draw his own conclusions and report the results. In addition to a few of the experiments usually found in physical laboratories in this country, the book contains descriptions of a great many common appliances, such as a water meter, a fire extinguisher, a sewing machine, a kerosene lamp, &c. Some of these are intended only to be examined and reported upon, with others simple experiments are performed. While teachers of physics will find the book useful on account of the suggestions regarding practical applications, it is obvious that it cannot be used conveniently as a textbook unless the laboratory contains examples of the apparatus described. For example, few school laboratories contain a working model of a locomotive engine, without which Experiment 27 cannot be performed. Practically the whole of the appliances described, however, are in common use in this country as well as in America, and therefore the use of the book will not be hindered by the impossibility of procuring apparatus. The book illustrates the strong modern tendency to bring school work more into touch with the practical affairs of life, and is to be commended on this account.

ENGLISH GRAMMAR, WITH ANALYSIS AND PARSING.

By H. G. SMITH, B.A., Senior English Master, King Edward's School, Camp Hill, Birmingham; and G. H. BALL, M.A., Head Master, King Edward's School, Camp Hill, Birmingham. Second Edition. 1s. 6d. net.

ENGLISH COMPOSITION, INCLUDING PRÉCIS AND PARAPHRASE.

By H. G. SMITH, B.A., and G. H. BALL, M.A. Second Edition. 1s. net.

These books have been written with a view to providing a course in English Grammar and Composition suitable for use in secondary schools. They aim at explaining the fundamental rules of the language and making clear the difficulties which teachers of Latin and French experience in imparting a knowledge of their subjects to young boys.

■ The above two books are issued in one volume entitled "English Grammar and Composition," and form a three years' course in English. 2s. net.

POETRY FOR BOYS.

By STANLEY MAXWELL, M.A. Second Edition. 1s. 6d. net.

A collection of poems of established literary merit printed in bold type.

"Such is the superiority of Mr. Maxwell's collection over every other similar kind of work we are acquainted with that not the least apology is due for its appearance. The selections have been made with a fine discernment of what will appeal to the interest of boys."—*Secondary Education*.

FRANÇOIS CHANTREY: DONKEY BOY AND SCULPTOR.

By HAROLD ARMITAGE. Illustrated. 1s. net.

A wholly delightful reader for pupils of 10 to 12.

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master, Cheltenham Grammar School. 185 Exercises. Sixth Edition. 1s. 6d. net.

A REFORM FIRST FRENCH BOOK.

Especially written for the use of Adult Students. By J. STUART WALTERS, D.ès L. Illustrated. Second Edition. 1s. net.

DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

TRISTAPATTE ET GORET, Etc. Crown 8vo. 1s. net.

"The five simple stories contained in this book have been taken from the 'Livres roses Larousse.' Each is divided into short sections, and to each section there is an 'Exercice,' consisting of a set of French questions on the text, questions on grammar and vocabulary, and a subject for free composition."—*School World*.

PIERRILLE. By JULES CLARETIE. Crown 8vo. Third Edition. 1s. 6d. net.

A delightful idyll of peasant life, filled with dramatic incident, and true to nature in every detail. Edited for upper forms. "Well edited, with brief but adequate notes in French."—*The Journal of Education*.

TAMANGO and JOSÉ MARIA LE BRIGAND. By PROSPER MÉRIMÉE. Crown 8vo. Second Edition. 1s. net.

TAMANGO is also issued separately in limp cloth, at 4d. net. "A dramatic but fascinating story, well printed, with excellent exercises, notes in French, and a short account of the author."—*The A.M.A.*

LA BELLE NIVERNAISE. By ALPHONSE DAUDET. Crown 8vo. Fourth Edition. 1s. 6d. net.

"The editor has done his work well. The exercises are carefully arranged."—*The A.M.A.*

BUG JARGAL. By VICTOR HUGO. Crown 8vo. 2s. net.

"This story, written when the author was a schoolboy of sixteen, has been well edited for school use, for which it is very suitable. The Notes and Vocabulary are in French, and are arranged as they occur, not alphabetically. The exercises are particularly good, and include a sufficient amount of word-formation."—*Modern Language Teaching*.

CARTE DE GRAMMAIRE. By MISS L. E. THEEDAM, The Godolphin and Latymer School, Hammersmith. 6d. net.

A concise résumé of French accidence, written in French and intended to be used in connexion with Reform French Textbooks and readers, by pupils of Junior and Middle School forms.

AN INTRODUCTION TO HEAT.

By ARTHUR R. LAWS, B.Sc., and GEORGE W. TODD, B.A., D.Sc., Science Masters at the Royal Grammar School, Newcastle-on-Tyne. With 106 diagrams. 2s. 6d. net.

The main idea underlying it is that boys are gifted with a large amount of curiosity, and that, when they once realize that there is something behind many of the phenomena of everyday life, they are prepared to take a good deal of trouble to satisfy their inquisitive instincts.

OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 diagrams. 2s. 6d. net.

"In the main a series of examples in theoretical physics, for not only are there numerous numerical exercises at the end of each chapter, but more than four hundred of a miscellaneous character at the end of the book. The book will probably be found quite useful."—*Nature*.

FIRST SCHOOL BOTANY.

By E. M. GODDARD, B.Sc., Science Mistress, Girls' Secondary School, Colchester. With 207 diagrams. Second Edition. Crown 8vo, 2s. 6d. net.

"An excellent combination of practical exercises and clear explanations, illustrated by good bold outline drawings. The pupil who works conscientiously through the physiological experiments, and laboratory and field observations described in this small volume, will have won something better than examination successes."—*Nature*.

The book covers the syllabus of the Oxford and Cambridge Junior Local Examinations.

AS YOU LIKE IT.

Ed. by C. R. GILBERT, M.A. With Notes. 1s. net.

THE MERCHANT OF VENICE.

With revised Text, Questions, Notes, and Appendixes. By G. H. BALL, M.A., and H. G. SMITH, B.A. 1s. net. Text only, 6d. net.

"The chief feature of this edition is the series of appendixes which is admirably contrived. Notes, suggestions for character study, and essay writing thereon, short expositions of all outstanding features of interest, and a set of examination papers, old and new, are provided, and are of invaluable help to the earnest student. The text is in good plain type."—*Times*.

A NEW SCHOOL ALGEBRA.

By W. J. WALKER, M.A., Head Master of Woodhouse Grove School, Apperley Bridge, Bradford. Second Edition. In two volumes, each 2s. net with or without Answers. Complete in one volume, with or without Answers, 4s. net.

"There are plenty of mental or oral questions and test papers. The type is large, and most left-hand pages begin with a new exercise. The examples are for the most part original and are carefully arranged."—*Mathematical Gazette*.

PREPARATORY ARITHMETIC.

By F. C. BOON, B.A., Principal Mathematical Master at Dulwich College. Second Edition. With Answers, 1s. 6d. net; without Answers, 1s. net. Answers separately, 6d. net.

A revised and enlarged edition of this well known book. A large number of new examples have been added, and the few misprints in the first edition corrected.

A FIRST SCHOOL CHEMISTRY.

By F. M. OLDHAM, B.A., Senior Science Master at Dulwich College. With 71 Illustrations. Tenth Edition. 3s. net.

GRAPHS IN ARITHMETIC, ALGEBRA, AND TRIGONOMETRY.

By W. J. STAINER, B.A., Head Master of the Municipal Secondary School, Brighton. With 120 Diagrams. 2s. 6d. net.

Physical Training.

CONTINUED FROM PAGE 82.

H. G. JUNKER'S INSTITUTE OF SWEDISH (LING'S) EDUCATIONAL GYMNASTICS, SILKEBORG, DENMARK.

Sanctioned by the Danish Board of Education.

THE FULL TRAINING

COURSE of Swedish Gymnastic (Theory and
Practice), including Anatomy and Physiology
(Hygiene), Psychology, Games, Dances, some Cor-
rective and Remedial work, &c. (held in the English
Language), for men and women, thoroughly equip-
ping students of good education as teachers of Ling's
System, commences on September 5th.

The Course extends over two years, but specially
prepared students may complete the training in one
year.

Fee: £90 per annum (£10 per month), including
tuition, board and lodging. (No extras except
laundry).

The Annual HOLIDAY COURSE will
be held from July 31st to August 27th.

Fee: £10, including tuition, board and lodging.

Application Form and further particulars can be
obtained from the PRINCIPAL.

H. G. JUNKER,
Late Assistant Inspector of Physical
Education under the Danish Board
of Education, late Special Instructor
and Inspector to the Education
Committee of the County Council
of the West Riding of Yorkshire,
England.

PORTLAND ROAD GYM-

NASIUM, London, W.—Students thoroughly
trained for Public Examinations. Duration of Course,
2 to 3 years. All branches of Physical Work. English
and Swedish Gymnastics, Hygienic Exercises,
Dancing, and Remedial Work.—Miss TOLLEMACHE,
Member and Examiner of the British College of
Physical Education, M.G.T.I., Kyson, 32 Highcroft
Gardens, Golder's Green, N.W.4.

BURLINGTON CORRESPONDENCE COLLEGE.

Principal: Mr. J. CHARLESTON, B.A.
(Honours Oxon. and Lond.).

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and other Universities.

METHOD.—Thoroughly individual system, which ensures the closest attention to the needs of each student.

Rapid preparation for :—

Matriculation,

Intermediate Arts and B.A.,

**Intermediate Science and
B.Sc.** (Theoretical Subjects only).

L.L.A. (St. Andrews),

**College of Preceptors' Dip-
lomas.**

SINGLE subjects may be taken if desired.

**Address—THE SECRETARY,
Burlington Correspondence College,
14 Blisnam Road, Kensington, W.14.**

JOINT SCHOLASTIC AGENCY, LTD.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. *There is no Registration Fee, and the lowest possible charges are made for Commission, which are still further reduced by large discounts—see Rules VII and VIII of Prospectus, which will be sent on application.*

This Agency is under the direction of a Committee representing the following leading Educational Associations :—

Head Masters' Conference; Incorporated Association of Head Masters; College of Preceptors; Teachers' Guild; Incorporated Association of Assistant Masters.

Registrar: Mr. E. A. VIRGO,

9 Brunswick Square, London, W.C.1 (near Russell Square Tube Station and the Foundling Hospital).

Office Hours: 9.30 a.m. to 5 p.m.

Saturdays, 9.30 a.m. to 1 p.m.

The most convenient hours for interviews are from 11.30 a.m. to 1.30 p.m., and from 3.30 p.m. to 4.30 p.m.

Appointments should be made when possible.
Telephone: Museum 3217. Telegrams: "Educatorio Grenville London."

E DUCATED GIRLS thoroughly trained for permanent and well paid Secretarial and Journalistic Appointments. Prospectus—Miss IRONSIDE, Training Bureau, 50, Lincoln's Inn Fields, W.C.2.

W IDOW, well recommended, educated at Public School, capable, bright and active, having own furniture, wishes to hear of opening for STUDENTS' HOSTEL, or for BOARDING HOUSE FOR GIRLS attending good School. Address—No. 10, 726.*

L ECTURES ON ART. Single or in Series. London and the provincial capitals. For prospectus and terms address—Miss A. ROBERTSON, 45 Paulton's Square, Chelsea, S.W.3.

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Rice, 3 Ludgate Broadway, E.C.4." Each must contain sufficient loose stamps to cover postage on to advertiser. Post cards will NOT be sent on.

STAMMERING

PERMANENTLY CURED.

RESIDENT AND DAILY PUPILS.

SURVEYING INSTRUMENTS ON LOAN.

W ANTED in connexion with Y.M.C.A. University Committee Educational Scheme for Troops on Lines of Communication in France the loan of Surveying Instruments for practical instruction to men.

Also two Astronomical Telescopes (Watson's Astronomical 3 inch telescope preferred).

Sub-Directors would hold themselves responsible for safe return of Instruments loaned. Please address offers to SECRETARY, Y.M.C.A., Universities Committee, 25 Bloomsbury Square, W.C.1.

Continental School.

**COLLÈGE DE CANNES, PRÈS
NICE (ALPES MARITIMES), FRANCE.**

A fine new building, with every modern comfort. Private rooms. Three months' course giving fluent knowledge of French to foreigners. £21. 8s. a term.

GEORGE GILL & SONS, Ltd.

THE OXFORD AND CAMBRIDGE EDITION.

Gospel of St. Mark. By the Rev. F. MARSHALL, M.A. Maps of Palestine, Sea of Galilee, Galilee, Jerusalem, Environs of Jerusalem, Temple; Special Introduction.

Acts of the Apostles. Part I, Chapters i-xvi. By the Rev. F. MARSHALL, M.A. Specially prepared for Students taking the first part of the Book. Complete for the purpose, with Geographical and Biographical Notes, Maps, and Introduction.

As You Like It. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. 256 pp., Cr. 8vo.

Henry V. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Maps and Genealogical Tables. 256 pp., Cr. 8vo.

Richard II. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Illustrations and Genealogical Tables. 232 pp., Cr. 8vo.

— READERS. —

Gods and Heroes; or, Greek Fairy Tales. By P. C. SANDS, M.A., late Fellow of St. John's College, Cambridge. This is a reader intended for use in the Lower Forms of Schools. It gives a splendid initiation into the stories of ancient Greek mythology. Cr. 8vo, 128 pp., Cloth, 1s. 3d.

La Guerre, A.D. 1914. With notes on idiomatic phrases, by TAYLOR DYSON, M.A. A selection of leading articles on the Great War taken from the French and Belgian newspapers and arranged as a book for French Unprepared Translation for Middle and Upper Forms. Cr. 8vo, 128 pp., 1s. 3d.

La Guerre, Vol. II. A sequel to La Guerre, A.D. 1914. By TAYLOR DYSON, M.A. 1s. 3d.

ATLAS AND NOTES ON EUROPEAN HISTORY.

From the time of DIOCLETIAN to the outbreak of the GREAT WAR, 1914.

By HARTLEY FUDGE, M.A. 1s. 6d.

"The book consists of 36 Coloured Maps, not too full of names, and 104 pages of Notes, so called, which, however, practically form a précis of the history of Europe, from Diocletian to the Congress of Vienna. The author then carries forward history to the outbreak of the present War, by dealing separately, but still chronologically, and ab initio, with the history of Poland, France and Alsace-Lorraine, Prussia and German unity, the Dual Monarchy, Ottoman Empire, the Near East, and the like. The whole forms a small reference book useful for History teaching."

Journal of the A.M.A., Dec., 1918.

"In the body of the book there are more than thirty maps which, for the clearness of their lettering, we have very seldom seen excelled. Taken as a series they enable us to trace without confusion, through the centuries, the various stages in the political development of Europe."

Irish School Weekly.

ARITHMETIC BY DECIMALS.

OCCASIONAL NOTES.

OUR readers will have learnt with great relief that Mr. Fisher is to continue as President of the Board of Education in the new Government. This time rumour certainly proved to be a lying jade, and Mr. Fisher, as was stated in some of our contemporaries, was not, after all, marked out for "promotion." Perhaps the resolution of the Head Masters on January 3, and that of the teachers in conference on January 4, assisted Mr. Lloyd George to arrive at his final decision. In any case, the Prime Minister, Mr. Fisher, and all who have the interests of British education at heart, may be congratulated upon the result. Mr. Fisher has indeed won his spurs, and we understand that he personally wished to remain at the Board of Education so as to be able to complete the work he has begun with such conspicuous success. We hope the time is not far distant when the presidency of the Board of Education will rank with the highest Cabinet offices, and that, when its importance is fully recognized, the country will be able to secure for it a man possessed of the knowledge, judgment, and Parliamentary skill which Mr. Fisher has shown.

THE recent visit of President Wilson to Europe is a striking and significant event. It marks on one hand the return of the "Mayflower," and on the other the end of the Monroe Doctrine. That is to say it symbolizes in the first place the complete and cordial reunion of the two long-sundered branches of the Anglo-Saxon race, and in the second place the abandonment of that policy of isolation which has been America's cherished

tradition for the past century. The course of events during the last four critical years has necessitated the closest co-operation between Britain and America in defence of their common tradition of freedom, and it has compelled the Transatlantic Republic to intervene with all her might and with decisive effect in the affairs of the sad and bad Old World. President Wilson reached France on December 13. He went there first because he had more things to say to M. Clemenceau than to any one else. The French Premier admits that at first they did not see eye to eye with one another in respect of several crucial questions. The final outcome of these conversations has, however, happily been a general agreement. Although M. Clemenceau's pronouncement concerning the Balance of Power does not at first seem to accord with President Wilson's regarding the League of Nations, a moment's reflection shows that there is no essential conflict. The "Balance" which M. Clemenceau desires is not the old Balance, nor indeed strictly a Balance at all, but an overwhelming alliance of democratic states pledged to freedom and to peace. The President's League, although it may ultimately include repentant Germans and their dupes, is at first to be precisely the same thing. In England, which he reached on December 26, the American President had fewer controversial points to discuss, and he was able to devote himself primarily to social functions the object of which was to display and to emphasize the permanent establishment of the Anglo-Saxon *entente cordiale*. The once-thorny question of the Freedom of the Seas had been deprived of its pristine prickliness long before the President's arrival. He had recognized and admitted that no interpretation of that ambiguous and unlucky phrase could be accepted that would involve any diminution of those belligerent rights of the British Navy which, under God, had been the main means whereby victory over the Autocratic Empires had been secured.

MR. FISHER was given a royal welcome at the inaugural meeting of the Annual Conference of Educational Associations at University College on New Year's Day. Twenty minutes before the meeting was timed to begin the lecture theatre was uncomfortably packed, there being no standing room even. So large was the disappointed crowd that Mr. Fisher, with characteristic kindly thought for teachers, consented to repeat his address to an overflow meeting in another part of the College. The heartiness of this welcome, as well as the resolutions passed by the Head Masters at their meeting on January 3, and by the Annual Conference on January 4, show how completely Mr. Fisher has captured the confidence of educational workers throughout the country. His address on January 1 on "The Art of Keeping Alive," bubbled with humour and sparkled with epigram—certainly Mr. Fisher has the gift of keeping an audience alive and keenly interested. We cannot refrain from repeating a few of his *obiter dicta*. "The hardest problem of educational statesmanship is not to find and test the teacher, but to keep him alive and interested in the continuous exercise of his craft." "It is stupid to overwork; it is ruinous to coddle." "A school without a library is like a man without eyes." "Some school libraries contain at least a ton of tedium for every ounce of entertainment." "The real test of old age is spiritual estrangement from the life of youth." "Next to poverty, the force which has most powerfully con-

Mr. Fisher at the January Conferences.

tributed in the past to depress the vitality of the teacher is the sense of isolation." "Leisure is only valuable if it improves the quality of work." We hope it may not be long before Mr. Fisher is again persuaded to address teachers on their everyday work.

Entertainments for Children. IN the Christmas holidays especially the need for healthy and amusing entertainments for boys and girls of preparatory-school age is much felt in London and other large towns. The average pantomime of commerce seems written to appeal to the humour of dwellers in mean streets. When a child has reached an age to understand the songs and dialogue, he becomes bored by the references to kippers, lodgers, mothers-in-law, and the usual stock-in-trade of the low comedian from the music-halls. Then, of course, there remains "Peter Pan," but in time even that masterpiece loses its first freshness. So we are glad to note the venture of the Hammersmith Lyric Opera House, which opened on Christmas Eve with a delightfully original play by Mr. A. A. Milne, "Make Believe," which is certainly not without its appeal to parents also. The scenery, the music, and even the programmes are unlike those of other theatres; but in these days of entertainment taxes the middle-class father finds it difficult to afford many trips to theatre-land. We feel convinced that there is a large *clientèle* waiting for any one bold enough to open a real kinema for children. The filming of fairy stories and of the many children's books would afford a large choice for the afternoons of a four-weeks' season. In the evening the usual "crook" or cowboy scenes might reappear without hurting the minds and eyes of the young. The day is not far distant, we trust, when every large school will have its own kinema for teaching many subjects. The eye needs educating as much as the ear.

The Army Education Scheme. THE Army Education Scheme is having a better Press than it deserves, yet no one will grudge the promoters their advertisement if only they achieve their proximate aim in the permanency of the new "Educational Establishment." It will indeed be a capitulation for commanding officers to admit that the would-be efficient soldier can spare time for general education. But, as an instrument of training or education, the scheme has still to justify itself. It bears all the signs of an extemporisation: schemes of work were not thought out beforehand—are not thought out yet; there has been no careful selection of textbooks; the administrative personnel, with here and there an exception, has apparently been chosen for its innocence of any knowledge of educational routine; and the *corpus vile*, as Lord Gorell tells us, is as changing as a snow man. If the Department are really concerned to do more than just keep the men out of mischief for a few idle hours a week, they would be well advised to concentrate their military talent on the Army Overseas, and to entrust the education of the Home Forces to the Local Education Authorities. These at least know what evidence of capacity an instructor ought to produce; their staffs can suggest suitable subjects and curricula; and all the business of time-tables and textbooks is as familiar to them as it is mysterious to the average captain on the Educational Establishment. In the early days of the War the Local Authorities strove against much opposition to provide for

the educational needs of the recruits; where the conditions were favourable the work succeeded, and where it was not successful it was not expensive. Let Lord Gorell apply to the Board of Education for the names and addresses of the County and County Borough directors, and send the list round his establishment with the necessary instructions. At the worst, he will save the tax-payer much unremunerative expenditure; at the best, the Home Forces will gain a solid educational advantage in place of amusing but otherwise unsatisfactory tit-bits.

Cambridge and Compulsory Greek. ON January 17 the Senate of Cambridge University approved, by 162 votes to 14, the report of the Special Syndicate on the rearrangement of the Previous Examination, Part I, which involves making Greek an optional subject with certain modern languages. This abolition of compulsory Greek at Cambridge

is the logical outcome of changes which have been taking place in recent years in the curricula of public and other secondary schools. For instance, in 1912 the head masters of five great public schools came to the conclusion that boys in public schools either need not begin Greek till they are fourteen or need not take it at all. For some years past the Board of Education have been bringing pressure to bear, and have induced many schools to reduce the number of languages taught to two—of which one must be French. There is now, too, fairly general agreement that the education of all boys and girls up to sixteen should be general in character, specialization being deferred until after that age. In view of tendencies of which these are typical, it has been anomalous, to say the least, that students proposing to graduate in mathematics, science, or other of the many modern subjects, should have been compelled to acquire a modicum of Greek to "satisfy the examiners." Probably the regulation now abolished, which has, we think, ruled for ninety-five years, has on the whole done more to discredit the study of Greek than to encourage it. May Oxford soon follow the excellent lead of Cambridge!

The Future of the Study of Greek. THE abolition of compulsory Greek will save the time and prevent much irritation of future University students not proposing to graduate in classics, but it need not, as many distinguished humanists have admitted, in any way interfere with the serious study of the classical languages. The study of Greek may be deferred until the upper forms of the public schools are reached, and still remain an integral part of the curriculum of these schools. So long as a classical education is regarded as the best introduction to many professions, and as the most suitable preparation for success in public life, so long will the public schools continue to encourage their most able boys to specialize in classics. And it will be long before the older Universities consider the possibility of degrees in classics without Greek. Though Greek is not compulsory in our newer Universities, many of their students still take up its study with enthusiasm. Convinced as we are of the supreme importance for the spiritual and intellectual life of the community of preserving sound classical scholarship, we are sure that the abolition of the small amount of compulsory Greek which Cambridge has hitherto demanded from all and sundry will in no way detract from the serious pursuit of clas-

sical learning by those whose tastes and genius lie in this direction.

Urgently needed Help.

THE Professional Classes War Relief Council are asking further assistance from the generous public to enable them to carry on their work throughout the current year. Since October 1914 they have assisted with the education of about 800 children, the sons and daughters of professional men, and still have on their register for the current term between 300 and 400 children. Up till December 31, 1918, the total expenditure on this part of the Council's work had been £25,000. This sum was expended for fees at either boarding schools or day schools; for maintenance grants when the children live at home and it is felt that the family's income is insufficient to provide adequate food for them; for travelling expenses, school books, and necessities; for school outfits and for other incidental expenses. The carrying out of the Education Department of the Council's work is in the hands of a body of experts, with Sir John McClure as chairman and Mr. Cholmeley as deputy-chairman. Valuable co-operation has been given by the heads of many schools throughout the country. The Council point out that the peace which fills all hearts with thankfulness and hope will by no means bring instant relief to those on whose behalf the Council work; indeed, in many cases it may bring added suffering owing to the loss by both men and women of employment in temporary Government war work.

The Medical Council and the First School Examination.

WE welcome cordially the decision of the General Medical Council to accept the certificate of the First School Examination as fulfilling the educational requirements for admission to the Register of Medical Students, though with the proviso that the subjects English and Mathematics must have been passed "with credit." We trust that further experience will lead the Council to accept the ordinary pass certificate. It is true that no subject will be named on the ordinary certificate, while the Council have hitherto rightly demanded English and Mathematics for both the senior and junior preliminary examinations for the medical profession. The admitted aim of the Council is eventually to establish the senior examination—the standard of the complete pass-with-credit—as the only gateway to the Register. In view, however, of the needs of the country and of the numbers of candidates coming forward, this ideal must be regarded as distant. Meanwhile it must be the desire of the Council and teachers alike to raise the level of the Junior Entrance Examination. Beyond question, the First School Examination in any shape or form is a higher qualification than the Junior Medical Preliminary, and it is to the interest of the schools and of the country alike that as many candidates as possible should seek admission by the First Examination. Weighty arguments have led the Council to insist that English and Mathematics should be named on the certificate. We fear that the standard thus set will prove too high and the position of the Junior Examination be found more securely entrenched.

THERE are two reasons for the perplexities arising out of the new Superannuation Act. First, while the position of the teachers in the primary schools is

The Superannuation Act.

established, many secondary school teachers have no existence in the eyes of the State. Secondly, during the final stages of the Bill, a hurried extension had to be made to pacify the advocates of the better-known non-State schools. At the same time the expenditure had to be kept near the amount granted by the Treasury. As a consequence the Act is in parts vague, and vital points are qualified by the words "subject to prescribed conditions." The Board of Education have now issued certain Statutory Rules and Orders which prescribe conditions for pensionable service and elucidate other clauses. In any consideration of the Act, it is important to distinguish between "qualifying" service, which is not, as such, pensionable and "recognized" service, which is; and also between the full recognition of certain non-State schools and the partial recognition of service in *any* non-profit school. The extension to certain non-State schools is now defined. Although the Act has justly been welcomed as an important advance in educational progress, it would be idle to expect that, with its omissions—to say nothing of the total exclusion of certain classes of teachers, e.g. University lecturers—we have heard the last word on the subject.

The Church and Education.

WE have pleasure in directing our reader's attention to the report on "Christianity and Industrial Problems," drawn up by the Archbishop's Fifth Committee of Inquiry. The whole report is replete with interest and significance, but our special concern is of course with the chapter on education. If there was a time—and we fear that on this point the report is less accurate and outspoken than on most others—when the Church distrusted and suspected all educational effort which did not originate with itself, and was therefore led into the mistake of putting a drag on the wheel of progress, that time has manifestly gone by. This report is a well-informed and carefully considered survey of the educational situation, and it constitutes a whole-hearted acceptance of an advanced programme of reform. A liberal culture for all, care for the physical welfare of children, less stinted expenditure upon education, the raising of the status of teachers, continued education for adolescents with better wages for the parents as a corollary, educational opportunities of a non-vocational character for adult men and women—these and other reforms are earnestly demanded, in the name of those principles of social justice which are of the essence of the Christian religion. We wish we had space to quote some of the striking sayings with which the report abounds, but for these we must refer our readers to the report itself.

Expenses of Educational Meetings.

THE enlarged responsibilities to be fulfilled by Local Education Authorities increase the advisability of representatives meeting to discuss their difficulties and achievements and of taking part in professional conferences. The regulations made by the Board of Education under Section 38 of the new Act, with reference to the expenses of education meetings, will remove any hindrances that have existed hitherto in promoting facilities for the organization of conferences and the attendance of accredited representatives. Under the County Councils Expenses Act, 1890, the Council of an administrative county was authorized to pay out of the

county fund any sum not exceeding £31. 10s. as an annual subscription to the resources of an Association, as well as any reasonable expenses of not more than four representatives in attending meetings. Similarly, the Public Health and Local Government Conference Act, 1885, provided for conferences of Local Authorities, as defined by the Public Health Act, 1875—that is, Urban Sanitary Authorities, and Rural Sanitary Authorities. But no similar statutory sanction has been in existence to meet the case of the Councils of Boroughs, and these Authorities, when they have desired to hold conferences in connexion with their duties under the Education Acts, have availed themselves of the provisions of the School Board Conference Act of 1897.

THE new regulations enable any Local Education Authority to make reasonable payments for actual travelling expenses and subsistence, in accordance with the scale adopted by the Council concerned, to persons nominated to attend a meeting or conference held for the purpose of discussing the promotion and organization of education or educational administration. As regards contributions towards the expenses of conferences and associations, a Council may, in connexion with any one meeting or conference, subscribe a sum of two guineas or an amount equal to two shillings per thousand of the population of their area; they may also pay a yearly subscription to any Association or body, organized for the discussion of educational problems, a sum not exceeding ten guineas if the population of the Council's area exceeds twenty thousand, and a sum not exceeding five guineas if the population is below twenty thousand. These regulations to facilitate the stimulus of consultation are all to the good; there remains the more urgent question of recognizing the need of encouraging regular attendance at the numerous meetings of Education Committees and Sub-Committees by refunding the travelling expenses of members.

MATHEMATICAL PROBLEM PAPERS.

By Dr. CHARLES DAVISON.

MATHEMATICAL exercises belong to three classes. There are mere examples on some theorem or method or formula, examples which are designed to aid the understanding of the theorem or method or the remembering of the formula. Again, there are riders which may require some thought or skill for their solution, but for which a hint is usually given as to the use of the theorem to which they are affixed, though other theorems may also be involved and some construction, more or less simple, may be required. And, lastly, there are problems which differ from riders chiefly in the absence of any hint for solution, and as a rule, though not always, in their greater difficulty.

Mathematical problem papers were at one time a prominent feature in scholarship and tripos examinations. In the former they have usually disappeared or been replaced by bookwork papers, which are really collections of subjects for essays (most valuable in their way) rather than problems. In school work problem papers have long held a place, especially since 1885, when the Rev. J. J. Milne published his *Weekly Problem Papers*. During the present century they have to some extent been displaced, owing chiefly to changes in the method of teaching.

In selecting the problems for a general paper there are several points to be considered. The problems should not be chosen for their difficulty only. As a rule, each problem

should depend on some important theorem or illustrate some useful method. The pupil should feel that he has learned something from the solution of every problem, whether the solution is his own or the teacher's. As far as possible every problem should admit of more than one solution, partly because there is then more chance of a pupil hitting on one of the methods, partly because it is useful afterwards to compare the different solutions sent in, and to point out which solution is the best and why it is the best.

One of the chief difficulties experienced in making up a paper is due to the wide range of ability among the different members of a class. It is obvious that the paper must contain one or two problems which even the dullest boy has a prospect of attacking with success. There must be others which lie just within or just beyond the range of the ablest boy, for the problem from which a boy learns most is usually that which he can just not solve, while the problem from which he is likely to learn least is one which is considerably beyond his powers. Unfortunately it is not always possible to exclude all such problems, for a teacher may not at first sight appreciate the difficulties which a problem presents to a beginner. In order to save the time of the cleverer boys, and yet to provide ample material for the duller ones, alternative easy problems may be given or, which comes to the same thing, full marks may be obtained by working an allotted fraction of the paper.

Problem papers are usually of a miscellaneous character, one or more questions being given on each subject studied. Sometimes, however, a paper might consist of problems on a single topic. One might contain questions involving, say, the different tests of the perpendicularity of two straight lines, or the concurrency of several lines, or the collinearity of several points. Or, again, some important problem may be subdivided into a series of steps, leading finally to the solution of the whole: as, for instance, the calculation of the length of the third diagonal of a cyclic quadrilateral or the envelope of the Simson line of a triangle. Or a paper might consist of a group of theorems on one subject, the theorems being scattered in one or several textbooks, such as, for instance, those on the pedal triangle of a triangle, the medians of a triangle, &c. Papers of this kind have an object beyond that of ordinary problem papers; they help to co-ordinate a pupil's knowledge of certain subjects which are not specially considered as a whole in textbooks.

The length of a problem paper is naturally governed by the time that can be allowed for its solution. But whether the time should be limited or not is a matter on which one's practice may conveniently vary. To restrict the time encourages alertness of thought; to leave it unfixed enables a pupil to return to an intractable problem later, when some new method of attack may occur to him. As a rule, perhaps, but not always, the former method is more suitable to advanced pupils and the latter to beginners. To both a one-hour paper of very easy problems may often be given with advantage.

The marks allotted to the different questions in a paper must depend partly on the difficulty of a problem, partly on the more or less advanced nature of the reading required for its solution. It is not always easy for an examiner to determine the relative difficulty of two problems. Grasping the solution so readily himself, he cannot always appreciate the steps which a beginner must take in attaining it. For instance, in a paper of fifteen arithmetical problems, the marks at first suggested after working the paper from the proof were as follows:—

4, 4, 4, 4, 6, 4, 6, 4, 8, 8, 8, 8, 10, 10, 12.

Then, on rapidly looking through the papers sent up by three classes, and counting the number of correct solutions to each question, it appeared that the question which to the examiner seemed to be hardest then occupied a middle place; others, of what seemed moderate difficulty, obtained the fewest solutions. Making use of the order of difficulty as manifested by the candidates, the final marks allotted were:—

3, 3, 3, 6, 6, 4, 7, 6, 7, 6, 12, 6, 12, 12, 7.

The maximum marks for a problem being settled, there still

remains the question of deciding the numbers of marks to be given to solutions of varying merit. One's standard of merit is at the best an arbitrary one. It is clear that marks should be deducted if important steps in the argument are omitted, or if the argument is clumsily or incorrectly given. But two different solutions may both be presented without fault, and yet one may be distinctly better than the other and deserve the higher marks.

The labour of searching for problems, and the difficulty of obtaining or inventing suitable ones, may be considerable. In many cases, the labour may be saved by using one of the collections of problem-papers which have been published recently.* Such books possess advantages other than that of saving labour. They are almost sure to contain questions off the line or groove to which the teacher, perhaps without knowing it, may have become accustomed. Again, the author or compiler of a book is bound to have thought and searched widely for his problems, and those which he gives are the best of a far larger number collected.

A book of problem-papers may save a teacher trouble, and its use in class may save him time. But the needs of a class vary so greatly from one half-year to another that it is not often perhaps that a book will contain problem-papers that are suited to present needs. Again, a problem may happen to be beyond the reach of every member of a class, and it would then be advisable after a short interval to set a similar problem, or one depending on the same principle as that which they failed to solve. A book of papers can take little account of such a need. There is also a risk, which may not be serious, but is nevertheless present, that the solutions may be handed on from class to class in successive years.

CHILDREN'S IDEAS ON PUNISHMENT.

By WALTER WOOD.

AT the present time, when the European War is demonstrating daily the value of discipline and self-control, there is some anxiety at an apparent laxity in the control of children. It would be sad indeed if the rising generation, instead of profiting by the magnificent examples of self-sacrifice daily occurring at home and in the field, should grow up to suffer in moral stamina by reason of the efforts their parents are making towards the foundation of a better world. We have to recognize that the temporary withdrawal of the authority of the father from the home, and, possibly, the substitution of women for men teachers, has made a difference; that after four years the discipline of the home shows signs of relaxing, and that the moral welfare of children is beginning to suffer. It is therefore perhaps a not inopportune moment to consider this difficult question of punishment.

The purpose of punishment is known to us all, without reading Bentham on the subject. We know by common sense that punishment should be reformatory, deterrent, and retributive; the question is how to achieve that purpose. Many people will say that in the case of children this threefold purpose can be achieved without punishment. To this the answer is, in the case of some children, "Yes," in others "No." Punishment is so individual a thing that it is manifestly impossible to lay down rules. In all questions of education it is useful to look at the matter from the point of view of the child, and although it is perhaps particularly difficult to approach punishment from the child's standpoint, an attempt has

been made, and a body of opinion on this subject has been collected from the children themselves.

The method adopted was by means of the *questionnaire*, or lists of questions. These questions presented certain hypothetical cases of wrongdoing, and invited the child to place itself in the place of the parent and to say what punishment, if any, ought to be inflicted, and why. The examples were selected with great care and included the following childish misdemeanours. Thoughtlessness (a case of coming in late from play on a summer's evening by reason of forgetting the time); carelessness (two examples—breaking a tea-cup by accident and breaking a valuable vase by accident); disobedience and telling a lie. In addition the following problem in morality was included. A little boy, returning from an errand with a shilling change for his mother, gave the shilling to a poor old woman to buy food. The list of questions concluded by asking the children to say what punishment they minded most and what least. The questions were circulated amongst (roughly) two thousand boys and two thousand girls, aged eight to fourteen. The data available from the answers is worthy of the most careful consideration, but it is not practicable, within the scope of this paper, to do more than set out one or two of the conclusions which seem to be best substantiated in the hope that they will be, if not helpful practically, at least suggestive.

The first conclusion arrived at is that children of all ages are inclined to look upon punishment as merely retributive. "If I broke an expensive vase, or anything, I should get a good hiding." That is a typical answer. The punishment is the inevitable result of the accident: it is the just retribution. It does not occur to the child that it is carelessness that is being punished. Quite 80 per cent. of the children punish the breaking of the expensive vase more severely than the breaking of the tea-cup, which again points to our conclusion. "The worst punishment I ever had was when granny hit me with a stick for breaking her gramophone." No doubt many acts, no less careless, but with a less unfortunate result, went unpunished. To what other conclusion, then, can the child mind come than that the punishment is not for carelessness, but for revenge? We often tell children that we punish them for their own good. We use the classic formula, "It hurts me more than it hurts you." If the child believes this, it may afford him some satisfaction to know that he is not the only, or even the chief, sufferer; but does he believe it? In the case of children under ten we conclude they do not; such a moral abstraction is almost beyond their powers of reasoning in the light of their knowledge of the world.

The second conclusion is that there is too much useless punishment in child life. That is, too much punishment that achieves nothing, and which in some cases does not appear to have been meant to achieve anything more than to make the child uncomfortable. In other words, we see signs of the retributive idea of punishment existing in the minds of the parents. Whether this is a fair inference the reader must judge; but again and again the children's answers, which can only be based upon their experience, show that such misfortunes as breaking a valuable article or losing a shilling down a drain are more severely punished than disobedience or telling a lie. The example of the compassionate boy, in which the offence, if any, is giving away what does not belong to you, provides some illuminating answers. Suffice it to say that a higher percentage of girls punish in this case than in the following case of telling a lie. "A little girl was sent into the park with her baby brother and told not to go on the grass, which was wet. The little boy ran on the grass, and his sister went on the grass to fetch him back. On returning home her mother asked the girl if she had been on the grass, and she replied, 'No.'" This for most girls of all ages is "a let off." This seems to point to the serious need for teaching the importance of the strict truth; and the answers to the disobedience example show the same need for teaching strict obedience as such. Reasoning, appearing under the childish equivalents of "grumbling," "telling off," "talking at," and "spoken to," seems to be rarely resorted to, and on the whole there appears evidence of too much purposeless summary punishment.

* Such as: Milne's *Weekly Problem Papers* (Macmillan), Mayo's *Easy Problem Papers* (Longmans), Davison's *Easy Mathematical Problem Papers* (Blackie), Radford's *Mathematical Problem Papers* (Cambridge University Press), Durell's *Elementary Problem Papers* (Arnold), Fawdry's *Problem Papers in Mathematics* (Macmillan), Davison's *Mathematical Problem Papers for Secondary Schools* (Bell).

The third conclusion is that home punishments are "minded" more than school ones. "Writing words," "staying in," and "the cane"—the only three school punishments alluded to—preponderate in answer to the question "Which punishment do you mind least?" The only home punishment appearing at all frequently in this answer is "scolding." On the rare occasions on which a school punishment is "minded" most, it is always "the cane." Amongst little children, "because it hurts," and elder children, "because you have your name put down"—in other words, because of the disgrace. The cane at school, however, appears quite frequently, especially from the girls, as the punishment "minded" least "because it is soon over," and, more frequently still, "because it does not hurt." Corporal punishment at home, however, is another matter, and in nearly 70 per cent. of all answers figures as the punishment "minded" most. The dissentients from this view are mostly elder girls, who say "it does not make me want to do better," or again, "I mind not the least; but a motherly voice generally makes me cry." There is matter for reflection here. The answers seem to show that the moral effect of corporal punishment needs emphasizing, especially at school. That it is a strong deterrent for children under ten, and that after that age it is apt to lose its effect. The following are typical answers from children of twelve and thirteen: "I can stand being thrashed, as I am not a baby," and "I would rather have a whipping and let go out to play than stay indoors or go to bed."

A last conclusion is that there seems little co-operation between school and home in the matter of punishment. At all events, only two answers out of four thousand suggest such. "The worst punishment I had was from father when I got a bad report from school," and "I should send a note to the teacher to punish him." If this conclusion is justified, it is perhaps a pity, as both home and school are, so to speak, pulling the same boat.

A word in conclusion in defence of the *questionnaire* as a means of gaining information on educational topics. The grave objection is, of course, that children, always anxious to please, are so apt to write what they imagine is expected of them, or what they suppose will please, rather than what they really think. The answer is that with experience such answers are easily detected, and that if the net is sufficiently widely cast the false answers will be found to be only a small percentage of the whole. One genuine expression of opinion from a child will often upset all our psychological inferences as to what he *ought* to think, and we cannot afford to neglect any opportunity of gaining first-hand information from the "other world" of childhood.

WORLD ORPHANAGES.—Mr. H. L. Borgman teaches in an elementary school at Vledderveen, near Stads Kanal in Holland. He is a man of much enterprise. He is Secretary of the "Peace by English" League, the purpose of which is "to make English the world language, read by every civilized man, and used for all correspondence," which naturally has our cordial support. He is the founder of the movement for World Orphanages, which is intended to provide for children whom the War has robbed of their parents. As the result of a competition, plans have been prepared for such schools, a noticeable feature of which are the school gardens, by means of which the schools are intended to become self-supporting. This idea has sprung from what Mr. Borgman has achieved at his own school, where the school garden has been developed in an original way. He rented a piece of land measuring 70 metres by 20, and laid it out so as to represent Europe and America. The children were allotted sections—countries or parts of countries—and grew all kinds of crops. The produce was exchanged with other countries by means of regular commercial transactions, involving acquaintance with various currencies, rates of exchange, &c. Artificial manures were bought, agricultural implements were rented, money was borrowed from a bank, raw materials were turned to various uses, and so the garden became a means of practical instruction in many subjects. The scheme of World Orphanage seems to be as yet in its early stages. For information application should be made to Mr. Borgman.

PERSONAL PARAGRAPHS.

EDUCATION is well represented in the New Year Honours List. The baronetcy conferred on Sir Lewis Amherst Selby Bigge, K.C.B., Secretary to the Board of Education, will be regarded by all connected with education as a welcome recognition of the valuable services which he has rendered in connexion with the preparation of the new Education Bill and the School Teachers Superannuation Act. Mr. H. W. Orange, C.B., C.I.E., Accountant-General, Board of Education, will be regarded as fully entitled to the knighthood conferred on him on account of his services at the Board since he acted as Private Secretary to Sir George Kekewich some twenty years ago. Teachers are indebted to him for his work in connexion with the present Superannuation Act. Knighthoods are also conferred on Mr. Chimanlal Harilal Setalvad, Vice-Chancellor, Bombay University; Mr. J. H. Stone, Director of Public Instruction, Madras; and Dr. Prafulla Chandra Ray, Indian Educational Service, Bengal.

OTHER decorations are:—

C.B.—Mr. C. E. Ashford, Head Master, Royal Naval College, Dartmouth, and Adviser on Education to the Admiralty; Mr. W. R. Barker, Asst. Sec., Board of Education; Mr. F. H. Oates, Private Sec. to the President, Board of Education; Dr. J. L. Robertson, Senior Chief Inspector of Schools, Scotland.

C.M.G.—Mr. F. Tate, Director of Education, Victoria.

C.I.E.—Mr. J. G. Jennings, Director of Public Instruction, Bihar and Orissa; Mr. A. I. Mayhew, Director of Public Instruction, Central Provinces; Lieut.-Col. J. T. Calvert, Indian Medical Service, Principal, Medical College, Calcutta; Mr. B. B. Osmaston, President, Forest Research Institute and College, Dehra Dun, United Provinces; Rev. Dr. W. Skinner, Principal, Madras Christian College, Madras; Lieut.-Col. J. C. Lamont, Ind. Med. Service (ret.), Professor of Anatomy, Medical College, Lahore, Punjab.

THE list of promotions in and appointments to the Order of the British Empire includes the following:—

G.B.E.—Mr. W. Durnford, Provost of King's College, Cambridge.

K.B.E.—Prof. Bernard Pares, Professor of Russian, University of London; Prof. W. J. Pope, Professor of Chemistry, Cambridge University.

C.B.E.—Prof. J. W. Cobb, Livesey Professor of Coal, Gas, and Fuel Industries, Leeds University; Dr. A. Eichholz, Senior Assistant Medical Officer, Board of Education; Mr. J. C. M. Garnett, Principal, Municipal College of Technology, Manchester; Mr. H. J. Simmonds, Assistant Secretary, Board of Education.

O.B.E.—Mr. F. J. Armstrong, Senior Clerk, Scottish Education Department, Edinburgh, Secretary to Departmental Committee on Remuneration of Teachers; Prof. J. B. Baillie, Professor of Philosophy, Aberdeen University; Mr. G. T. Chivers, Head Master, Dockyard School, Portsmouth; Mr. J. T. Ewen, H.M. Inspector of Schools; Miss Flora Fardell, Honorary Secretary, Education Committee, Officers' Families Fund; Mr. S. G. Jones, Assistant Inspector, Board of Education; Miss Kate Manley, Woman Inspector of Domestic Subjects under the Board of Education; Mr. J. E. Singleton, Sub-Inspector, Board of Education; Mr. J. C. Smail, Organizer of Trade Schools under the Education Committee of the London County Council; Dr. W. E. S. Turner, Head of Department of Glass Technology at Sheffield; Mr. W. E. Watkins, Secretary to the Education Committee of East Suffolk; Rev. Basil A. Yeaxlee, Secretary, Universities Committee, Y.M.C.A.

THE recent elections resulted in two teacher representatives obtaining seats in Parliament; Major Gray, as Member for Accrington, and Mr. D. M. Cowan for the Scottish Universities. Such representation will undoubtedly be of inestimable value to education.

THE proposal to erect a memorial in Harrow School Chapel to the memory of Dr. H. M. Butler is nearing completion. The Archbishop of Canterbury is Chairman of the Committee which is making the necessary arrangements, and it is felt that nothing could be more appropriate than the erection of a pulpit, which would serve to recall to Harrovians the wonderful sequence of sermons which Dr. Butler preached there for upwards of twenty-five years.

OLD Harrovians in all parts of the world will learn with regret of the impending resignations of Mr. Edward Graham from Rendalls, Grove Hill, and Mr. Edward Montagu Butler, son of the late Master of Trinity, from The Park. Both were educated at Harrow and have taken prominent parts in matters affecting the welfare of the school. Mr. Graham was appointed in 1882, Mr. Winston Churchill being numbered among his pupils, and Mr. Butler has been on the staff since 1891.

NOTICE has recently been given of two notable bequests to Education. The late Dr. Percival, formerly Bishop of Hereford, has left a legacy of £1,000 to the Governing Body of Appleby Grammar School, at which he received his early education. The interest on the legacy is to be given to promising pupils requiring pecuniary assistance. The late Lord Rhondda has bequeathed £20,000 to Gonville and Caius College, Cambridge.

DR. HENRY BOND has been elected Master of Trinity Hall, Cambridge. Dr. Bond entered at Trinity Hall in 1873, and gained the Member's Prize for an English Essay two years later. He was senior in the Law Tripos, 1876; Chancellor's Medallist for legal studies in 1877; and he obtained a First Class in the Historical Tripos in the same year. He was appointed Lecturer in Law at Trinity College in 1886 and filled this position for thirty years. He was then elected to a Fellowship at Trinity Hall, becoming Law Lecturer there in 1888. He is a barrister-at-law of the Middle Temple and J.P. for the County of Cambridge.

MR. W. H. WATSON, acting Head of the Chemical Department of the Northern Polytechnic Institute, has been appointed Vice-Principal and Head of the Chemical and Natural Science Department of the Portsmouth Municipal College.

IT is reported that Prof. Percy F. Frankland is contemplating retirement from the Mason Chair of Chemistry at Birmingham University. Prof. Frankland has been in the service of the University for twenty-four years, but has lately suffered from ill-health and requires a complete rest from duties.

MR. T. W. HOLME, Assistant Master at Harrow School since 1904, has been appointed Joint Head Master of Locker's Park School, Hemel Hempstead.

MR. F. B. HALFORD, at present Second Master at Macclesfield Grammar School, has been selected for the headship of Alsop High School. Mr. Halford is a specialist in modern language teaching. He was formerly on the staff of Wolverley Grammar School, and his experience includes four years at continental Universities and schools.

THE Leicester Education Committee have appointed Mr. F. P. Armitage, head of the Modern Side, and chief Science Master at St. Paul's School, London, as their first Director of Education. Mr. Armitage has been a master of St. Paul's since 1898, and is the author of several textbooks on chemistry.

THE Council of St. Lawrence College, Ramsgate, have appointed the Rev. J. R. Taylor, formerly Vice-Principal of Ridley Hall, Cambridge, to be Head Master, and Colonel David Smith, Royal Military Academy, Woolwich, to be

Bursar. The school is returning from Chester to Ramsgate for the reopening of term.

BRIGADIER-GENERAL G. H. GATER, D.S.O., is to succeed Dr. Lloyd Snape, as Director of Education, under the Lancashire Education Committee. General Gater was formerly a scholar at New College, Oxford, and has had practical experience as a teacher. Before the War he was Assistant Director of Education for Nottinghamshire, where he rendered valuable organization services in connexion with the development of evening continuation schools. He joined the Army in August, 1914, with the rank of Second Lieutenant, and, although without previous military experience, he gained rapid promotion and distinction for service in Gallipoli, Egypt, and France. At the age of thirty-two, and after only three and a half years with the colours, he was in Command of an infantry brigade, and had been awarded the D.S.O. and bar. During the last few months of the War he saw a good deal of fighting, and at one time had a French battalion under his orders. He was recently awarded the Croix de Guerre and the Legion of Honour, and before the armistice he had been recommended for a divisional command.

PRESENT and past pupils of the Godolphin and Latymer School deeply regret the resignation of Miss G. Clement, who has been Head Mistress for the last fourteen years. Miss Clement was formerly a student at the Royal Holloway College, where she specialized in English. For many years she was an assistant at Bradford Girls' Grammar School, and in 1903 she became Head Mistress of the Stamford High School. In the following year she was appointed First Head Mistress of the Godolphin and Latymer School, when the old Godolphin Boys' School was re-built and re-endowed as a girls' school. Under Miss Clement the school increased rapidly in numbers and importance, and in 1909 extensions were made to increase the accommodation to 500. At present the school numbers 526, and it is but a fitting tribute to the Head Mistress to name the school as one of the largest and most successful in London. In September last Miss Clement arranged to resign at the end of the Michaelmas term, in order to take up more important war work in a Government Department. Now that war conditions are being removed, it is to be hoped that she will return without delay to the profession which can ill afford to lose her administrative ability and ripe educational experience.

GRESHAM SCHOOL, Holt, has suffered a grievous loss in the death of its Head Master, Mr. G. W. S. Howson, on January 7. Mr. Howson came of a family of schoolmasters; he was the son of Mr. W. Howson, Head Master of Penrith School, and grandson of the Rev. J. Howson, Second Master at Giggleswick. He was educated at the latter school and proceeded to Oxford in 1879, as a scholar of Merton College. He obtained a First Class in the Final Honours School of Natural Science in 1883, and took his M.A. in 1886. After serving as an Assistant Master at Newton College and Uppingham, he was appointed Head Master of Gresham School in 1900. The school had then been reconstructed by a scheme under the Endowed Schools Act, and with Mr. Howson's careful guidance it rapidly grew in size and importance, as shown by the number of scholarships gained at the Universities. Mr. Howson always devoted himself entirely to the welfare of his pupils, and entered whole-heartedly into all projects for the good of the school. He took a deep personal interest in his pupils, and exercised such an influence over them that the school became a home and a centre for old boys to an unusual degree. His death will be felt keenly by the large circle of old boys and parents, whom he delighted to gather round him.

THE Victoria Cross has been awarded, posthumously, to Captain (acting Lieutenant-Colonel) B. W. Vann, M.C., Sherwood Foresters. Captain Vann graduated B.A. at Cambridge in 1910. He played hockey for the University in the same year, and, after being ordained, spent two years as

Curate of St. Barnabas, New Humberstone, Leicestershire. He was appointed Assistant Master and Chaplain at Wellingborough School in 1912. Joining the Army in 1915, he was wounded some seven or eight times during the following three years. He won the M.C. and bar, and the Croix de Guerre by his many courageous deeds. The V.C. was awarded him for conspicuous bravery and fine leadership during the attack on Bellenglise, on September 29 last, when he led his battalion over the Canal du Nord under fire, and finally rushed a machine gun single handed. He lost his life when again leading his battalion at Ramicourt on October 3.

ONLOOKER.

TOPICS AND EVENTS.

LECTURES FOR LONDON TEACHERS.—A series of special lectures on subjects connected with problems of reconstruction has been arranged for the spring and summer terms by the London Education Committee. The lectures are available for all teachers, irrespective of the kind of institution in which they are employed. Full particulars concerning the various courses can be obtained from the "Handbook of Classes and Lectures for Teachers," copies of which can be obtained from the Education Offices, Victoria Embankment, W.C.2. Among the numerous lectures for the present term may be mentioned the course by Prof. H. S. Foxwell on "The Problem of Prices after the War, illustrated by Prices in and after the Napoleonic War," being given on Thursdays at 6 p.m. at University College, Gower Street, W.C.1; that by Mr. Harold Withers, on "National Finance after the War," at the London School of Economics, Clare Market, W.C.2, on Wednesdays at 6 p.m.; that by Sir Henry Newbolt, on "Poetry, Patriotism, and Civilization," at King's College, Strand, W.C.2, on Mondays at 5.30 p.m.; and that by Dr. W. T. Gordon at King's College, on "Britain's Underground Resources for the Future," on Saturdays at 11 a.m. A special series of addresses on various aspects of the problem of national reconstruction has been arranged for this term, and among them we notice one by the Master of Balliol on "Adult Education," at King's College, at 11 a.m. on March 22. The last two lectures of the series on "Science and the Nation" will be given at the Regent Street Polytechnic at 11 a.m. on February 15 and March 8, the first by Dr. Schuster, on "Pure Science in Relation to the National Life," and the second by Prof. J. B. Farmer, on "Some Aspects of the Rubber-growing Industry."

THE BOARD OF EDUCATION AND EVENING CLASSES.—The manner in which evening classes have been maintained throughout the period of the War has been, in the view of the Board, taking the country as a whole, highly satisfactory, and they think that Local Education Authorities are to be congratulated on the public spirit with which, in spite of many difficulties, they have endeavoured to carry on this important department of their work. It is nevertheless true that in some areas much of the work has, for reasons connected with the War, been dropped or seriously curtailed; and, now that some of the causes which have led to the closure or curtailment of evening classes can no longer be regarded as operative, and that conditions are tending to become more normal, the Board desire to call attention to the urgent importance of the resumption and development of these classes at the earliest possible date. In the special circumstances the Board are prepared to make reasonable modifications in the conditions prescribed by the Regulations for Technical Schools as regards courses of evening classes if good reason is shown when the application for recognition is made.

EDUCATIONAL RAMBLES.—A prominent feature of the Spring programme of the Selborne Society's Ramble Section consists of a series entitled, "Our Educational System," comprising visits to notable colleges and schools. The first visit took place on January 18, to University College, Gower Street, W.C.1, when Sir Philip Magnus, M.P., described the story and work of London University, and Sir Gregory Foster conducted the party over the College. Further visits include King's College on February 22 (under the guidance of Prof. Gollancz), and St. Paul's School, West Kensington, on March 22. Rambles through Legal London (including a visit to the Royal Courts of Justice, with Sir Edward Marshall Hall, K.C., as guide, and a visit to the offices of the Public Trustee under the personal leadership of Sir Charles Stewart, K.B.E.) are included in an attractive syllabus. Full details can be obtained from the Selborne Society, 83 Avenue Chambers, W.C.1.

(Continued on page 96.)

STUDENT CHRISTIAN MOVEMENT.

The Journal of Education.—"The Student Christian Movement is to be congratulated on its publications."

A Child's Bookshelf.

Suggestions on Children's Reading, with an Annotated List of Books on Heroism, Service, Patriotism, Friendliness, Joy and Beauty. By LILIAN STEVENSON. With a Foreword by the BISHOP OF WAKEFIELD. Fourth Edition. Revised and brought up-to-date. Paper boards, 2s. 6d. net.

"A most useful piece of work, admirably done."—*Preparatory Schools Review*.

The Meaning of Faith.

By H. E. FOSDICK. Second Edition. Cloth, 5s. net.

"Dr. FOSDICK has here added a worthy companion volume to his book on 'The Meaning of Prayer,' and higher praise than that a critic could scarcely pen."—*The Christian World*.

"The author's name is sufficient guarantee for any book on whose title-page it appears . . . He is a great teacher, worthy to be ranked with Henry Drummond."—*The Baptist Times*.

"Everything Dr. FOSDICK writes is well worth reading. We are inclined to think his last book is the best he has given us."—*The Record*.

A Study of Silent Minds.

War Studies in Education. By the Rev. K. E. KIRK, M.A., C.F., Lecturer and Tutor at Keble College, Oxford. 2s. 6d. net.

"Unique among war books . . . Should be read by anyone who has the real welfare of education at heart."—*The Church Times*.

"We believe the author of this book has succeeded in stating a certain problem clearly and rightly for the first time. . . . Mr. KIRK, from his experience of the British Army at the front, has made a discovery about the English mind."—*The Times Educational Supplement*.

"Mr. KIRK demands attention. . . . This most suggestive book can be heartily recommended."—*The Record*.

"Every now and then there is published a book which, small in bulk, is of really great importance. This is one of them."—*The Challenge*.

A Challenge to Girls.

Third Edition. 2s. net. Edited by M. GWEN SOUTHALE. Daily Bible readings and comments for twelve weeks, intended mainly for the private use of girls still at school, or who have just left. It has been specially prepared with those in mind who have been at the "University Women's," "Secondary School," or other camps for school-girls.

"It is a difficult task to provide spiritual help for school-girls to be in tune with their swift and generous idealism, to talk of the deepest things without self-consciousness, or a religious manner, or an objectionable 'heartiness,' or a portentous dullness. The writers of this book are to be congratulated on having triumphed over all these difficulties."—*The Challenge*.

BOOK ROOM:

32 RUSSELL SQUARE, LONDON, W.C. 1.

The Technical College

LOUGHBOROUGH, LEICESTERSHIRE.

H. SCHOFIELD, M.B.E., B.Sc. (Hons.) Lond.; A.R.C.Sc.Lond., Assoc.M.Inst.C.E., PRINCIPAL.

DEPARTMENTS OF MECHANICAL AND ELECTRICAL ENGINEERING.

Complete Courses of Training are arranged in both Theory and Practice of Mechanical Engineering.

The Workshops of the College provide accommodation for 500 students working at the same time.

The equipment is on most modern and comprehensive lines, and comprises plant for turning, fitting, milling, grinding, automatic lathe operating and tool setting, tool and gauge making, foundry work, pattern making, drawing office work, heat treatment, viewing and testing of all kinds.

None but first-class work of a productive character is undertaken by the students, working under the skilled supervision of a fully qualified technical staff.

The complete course covers a period of five years, during which works training in all the above sections will be given, and this will be accompanied by a full theoretical course of instruction in the College Lecture Rooms and Laboratories.

Intending students should be at least sixteen years of age, and have had a good Public School or Secondary Education.

The fee is £5 5s. per term, and there are three terms in the College session.

Boarding accommodation is provided in Hostels attached to the College, full particulars of which, together with illustrated Prospectus, will be forwarded upon application to the Principal.

W. A. BROCKINGTON, O.B.E., M.A.,

Director of Education.

THE ANGLO-FRENCH SOCIETY.—The London home of the Anglo-French Society was opened on January 1 at Scala House, Tottenham Street, W. 1. The premises include a lounge, a drawing-room, a gentleman's smoking-room, a ladies' boudoir and a small hall capable of seating an audience of two hundred. In it will be held the weekly causeries which were so popular last year. A special feature is being made of the library, where already the leading French periodicals and journals may be found and where shortly a representative collection of French works of reference and current literature will be housed. Teachers will find it a convenient rendezvous, and for them a reduced subscription has been inaugurated. For 7s. 6d. they can become members of the Society, and for £2 they can have the full use of the premises which fulfil all the requirements of a club. Teas are served between 4 and 6 p.m., and if need arises other meals will be provided. In February will appear the *Anglo-French Review*, designed to knit still closer the bonds that connect the two countries. Any doubt of its success will be banished when it is known that the editors are H. D. Davray and J. Lewis May.

A TRAINING SCHOOL FOR MUSIC TEACHERS.—The establishment of a Training School for Music Teachers was inaugurated on January 11 by a lecture from Mr. Stewart Macpherson. He emphasized the need for teachers to be something else than merely performers who could transmit the power of imitating musical parlour tricks to unwilling pupils. Teachers ought to be sufficiently equipped to be able to cultivate the minds of their pupils through their ears, and not only to train fingers to perform feats of digital dexterity. The music-teacher ought to take a wide view of the art, and link it up with literature and other arts. The teacher who professes to train others must himself be trained. At present the teaching profession is over-crowded with pianists, vocalists, and violinists, who imagine that because they can play or sing, therefore it follows of necessity that they can teach others. But the supply of trained music teachers who are able to take class work on artistic and comprehensive lines is quite inadequate to the demand. Hitherto, there has existed no comprehensive scheme for the training of music teachers: this want is now supplied by the new school, which is not established to foster any particular fad, but intends to make its students conversant with all important modern methods of music teaching. The work of the school will be carried on for the present at 19 Berners Street, W. 1.

PRIMARY SCHOOL NOTES.

The Superannuation Act.

THE attention of teachers who are included in any Pension Scheme drawn up by any Local Authority is directed to the ruling of Section 14 of the new Superannuation Act, whereby a declaration of withdrawal from such scheme must be made by the teachers concerned before July 1, 1919. In the case of a teacher entering recognized school service after April 1, 1919, the declaration must be made within three calendar months of such entry. Failure to make such a declaration debars a teacher from the benefits of the Superannuation Act of 1918. Forms of declaration of withdrawal, which must be signed in duplicate, can be obtained from the Local Education Authority or the Governing Body of the school in which the teacher is serving. Notice is also given by the Board of Education, under Section 4 of the Superannuation Act, that certified teachers who do not accept the Act shall give notice in writing to this effect before July 1, 1919. Teachers who do not desire to accept the new Act are therefore requested to give notice to the Secretary of the Board of Education.

The New Attendance Regulations and Half-Timers.

SEVERAL important changes relating to school attendance are outlined in the Board's Circular 1084. As from April 1, 1919, no additional attendances may be reckoned in respect of any partial exemption scholar. The effect of this decision will be to abolish the grant subsidy which has hitherto been paid by the Board of Education on account of the attendances of half-time pupils. If, for example, a half-timer made five attendances per week grant was paid on seven and a-half attendances, an addition of 50 per cent. being allowed. For the future, therefore, any continuance of the half-time system will involve Local Education Authorities in heavy financial loss. The new regulation would appear to be the forerunner of the announcement of the raising of the school age to fourteen years and the abolition of the half-time system.

As from April 1, 1919, school average attendances will be computed for the twelve months ending on March 31 in each year. New summary registers will, in consequence, be required on April 1 next in all primary schools where the registration year differs from that prescribed. Considerable clerical relief will be given to infant school teachers by the following regulation:—"No separate average attendance will be computed for children under and over five years of age; but a single average attend

ance must be found for all the scholars in a department." The condition that the Board will require quarterly summary returns on June 30, September 30, December 31, and March 31, on forms to be supplied, is new. As a matter of fact, quarterly summaries are kept already and the preparation of the returns will entail little additional labour.

The Demand for a National Scale.

THE position of primary school teachers in relation to scales of remuneration continues to be illogical and unsatisfactory. Scales of salaries vary widely in contiguous areas; and, in the few cases where uniformity of action has been sought, this appears to be directed not so much to the formulation of rates based upon the economic and professional needs of teachers as to the degree to which the grants of the Board of Education can be made to save the local rates. Quite a number of Education Committees, isolated for many years from direct contact with the general public owing to the lapse of municipal elections, appear to be under the impression that pre-war conditions of life are about to be resumed with the declaration of peace. Incompetence to read the portents of the times is not only largely responsible for the grave economic unrest among teachers, but it is a positive disqualification for the office of administering modern education. Strikes among teachers are increasing at an alarming rate. Practically every part of the country is affected by the feeling of injustice, and, unless the whole question of teachers' salaries is speedily taken up in a liberal and statesmanlike spirit, further strikes will occur all over the country. As an example of the anarchy which prevails upon the subject it may be stated that the maximum salary of an assistant master under the York scale is £300 per annum, that of a head master in the lowest grade school being £380; under the new Lancashire scale the respective amounts are £240 and £270. In addition to the disability of £60 and £110 per annum borne by a Lancashire assistant and head master, there would be a difference in the superannuation allowances of £30 and £55 per annum respectively. The fact that 60 per cent. of the amount expended upon teachers' salaries is to be paid by the Board of Education emphasizes the urgency of the need for the establishment of national scales. In this connexion it is significant that motions demanding a national scale have been received from Teachers' Associations throughout the country for discussion at the Easter Conference of the National Union of Teachers.

The Demobilization of Teachers.

THE demobilization of service teachers appears to be working expe-

ditiously; already in some districts the teachers are at home and preparing, after a short holiday, to resume school duties. Within a brief period, therefore, a large number of temporary teachers will be disengaged. The suggestion has been made that these teachers, practically all of whom are qualified and thoroughly efficient, could be retained permanently in the education service if the "Appointed Day" for the raising of the school age could be fixed for the immediate future. Most of the schools in areas where the existing leaving age is thirteen years will require an additional teacher when the age is raised to fourteen, so that the transition state could be smoothly bridged by the retention of War-time teachers. There is every possibility that many of these teachers, once dispersed, will not be available for school service.

National Union of Teachers.

THE War Aid Fund of the Union for wounded and incapacitated teachers, soldiers, sailors, nurses, and their dependents has realized the creditable sum of £147,500. The subscriptions have been steadily maintained since the inception of the fund, being composed of modest amounts readily repeated. The number of teachers reported killed is now 1,850. The withdrawal of Sir James Voxall and the defeat of Captain Goldstone at the General Election leave Major Gray, who was successful at Accrington, as the only Parliamentary representative of the Union. In connexion with the unrest among teachers in relation to salaries, it was reported at the last meeting of the Executive that the resignations of teachers had been sent in at Bacup, Gateshead, Grimsby, Ryde, and Stockton-on-Tees. There is a possibility of drastic action being taken in two other districts. The Annual Conference at Cheltenham, so far as the public sessions are concerned, promises to be concerned mainly with the questions of salary scales, supply of teachers, teacher representation on Education Committees, and the position of disabled soldiers as teachers.

ROYAL SANITARY INSTITUTE.—The prospectus has now been published of the courses of training for sanitary officers, health visitors, and school and maternity and child welfare workers, arranged by the Royal Sanitary Institute. The lectures will commence on February 17 at 6 p.m.

ENGLISH AND COMMERCIAL CORRESPONDENCE

By H. L. CARRAD, B.A. (Lond.)
(Honours in Modern Languages).

The Author has had extensive experience as a teacher, a lecturer, an examiner, and a business man. For many years he was an Examiner for the Union of Educational Institutions, and a Lecturer on English Language and English Literature under the Birmingham Education Committee.

This Text Book tells you

HOW to avoid meaningless phrases.
HOW to reconstruct poorly written letters, making them original and effective.
HOW to present their ideas clearly and forcibly.
HOW to criticize letters lacking in courtesy or clearness, and to reconstruct them to embody these qualities.
HOW to answer letters of enquiry.
HOW to write letters of introduction and recommendation.
HOW to order goods.
HOW to acknowledge orders and remittances.
HOW to compose form letters and sales letters.
HOW to condense all necessary information into a telegram or cablegram.

A course which not only teaches how to construct a letter that shall be mechanically correct, but *drills* students in the writing of original and effective correspondence on many and varied subjects, is invaluable. *Extensively used in Commercial Classes.*

to whom all remittances should be made payable. Orders and Cheques should be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating *full name and address* of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 LUDGATE BROADWAY, E.C.4.

JOHN RUSKIN AND EDUCATION.

JOHN RUSKIN, whose centenary falls this month, was, above all things, an interpreter of the Beautiful in Nature and Art, and a prophet of social righteousness. And therefore he was in the broadest sense a great Educator. "I feel as if I had hitherto been walking blindfold: this book has given me eyes," said Charlotte Brontë, after reading "Modern Painters." And his later books gave us eyes to see not beauty, but the ugliness of our social conditions under the industrial system. But with education itself he was but scantily concerned. He taught at the Working Men's College; he lectured on Art at Oxford, but the schools which he planned in connexion with the St. George's Guild were never actually brought into being. His views, therefore, will be rather broad and general, dealing with principles rather than methods and organization. For all that, they are seminal.

Some features must not be treated too seriously, such as his sweeping diatribes against the three R's and machinery. These, too, are useful to us, for we have been too much inclined to regard the three R's as ends in themselves instead of what they really are—mere instruments of knowledge. There is no nurture in them for the soul, and precious little for the mind; and there are other branches of knowledge which matter more. It is more important that we should learn the elementary truths about plants and animals, the processes of the seasons, and the habits of our Mother Earth; these things are the alphabet by which we spell out the secrets of Nature, and they are more essential to our wellbeing than the alphabet whereby we spell out the secrets of the *Daily Mail*.

Indeed, the great value of Ruskin to all educators is that he took such broad views of the subject. To him education was the biggest word in the language. He tells us of a girl who was

taken from school to look after her mother who was ill. Someone said it was "such a pity her education should be interfered with." As though the knowledge of French and other sideboard "accomplishments" could for a moment be regarded as having a higher life value than the tenderness of sympathy and gentleness of ministrations the lassie would learn at her mother's bedside.

He refused to think of school in terms of the classroom. Classrooms there have to be, and such classrooms should be made as beautiful as can be. "My own belief is," he says, "that the best study of all is the most beautiful, and that a quiet glade of the forest, or the nook of a lake shore, are worth all the schoolrooms in Christendom." These nooks and glades are very remote for most of us, but there is an underlying truth which we can follow out, as far as in us lies, and Mr. Fisher's holiday camps are on the line of Ruskin's educational gospel.

One of his great principles was that all true work is done with joy in the doing of it. But there was no flabbiness about his ideas of discipline. His own mother's training taught him that severity is not inconsistent with love. "Do the right thing, keep on doing it, and in the end you will come to enjoy doing it." Education to him was the debt which this generation owes to the generation that comes after. "God has lent us the earth for our life: it is a great entail. It belongs as much to those who are to come after us, and whose names are already written in the book of creation, as to us; and we have no right, by anything we do or neglect, to involve them in unnecessary penalties, and deprive them of benefits which it was in our power to bequeath."

This is the very spirit of our educational awakening of to-day. We are making our educational laws strict in order that our penal laws may be made light. It is what the psychologists call "inhibition through substitution." Offences will become few and disappear, when men have been taught in ways of mutual helpfulness "the things that are more excellent."

THE SUPERANNUATION ACT.

THE Statutory Rules and Orders (price 1d.) under which the new Superannuation Act is to be administered settle some of the many problems arising out of an Act introducing definite legislation for an undefined profession and complicated by the eleventh-hour inclusion of some of the non-State schools. Many people have failed to grasp the vital difference between "qualifying" service, which entitles a person to become a pensionable teacher, and "recognized" service, the years on which the amount of the pension is based.

The Rules state that no service under the age of eighteen shall count for any purpose, and that any medical fees must be paid by the person affected. Provided that the other necessary qualifying service has been rendered, teachers who have served continuously in qualifying or recognized service for two years before April 1, 1919, are eligible for pension after one day's further service. Where the service has not been continuous, periods of further service are prescribed in the Rules, varying from one to three years, with the nature and amount of the service immediately preceding April 1, 1919. It will thus be possible for a teacher with the necessary qualification, who has retired, to return, and, after certain further service, to retire with a pension. The last six months of this prescribed service must be in "recognized" service. War service is treated as recognized service, provided the teacher went from recognized service. If not, it counts as qualifying service. Similarly, any incapacitation—up to twelve months—as a result of War service, counts. The treatment of sick leave as service is subject to the arrangements made by the various Authorities, and is limited to twelve months. If this is to work smoothly and justly, the Authorities should come to some uniform arrangement with regard to sick leave. Medical examination is not required

except for the consideration of death gratuities. All entrants to recognized service after April 1, 1919, will be examined by a medical officer nominated by the Board, as will existing teachers who are over fifty-five on that date. Other existing teachers will fill up a medical form. The Rules give some alleviation as regards qualification to married women who return to recognized service. Other Rules deal with the formalities regarding application for the recognition of qualifying service and for pensions and gratuities on breakdown; with the right of refusal of certificated teachers to participate in the scheme; and with the withdrawal from present schemes.

The part of the Act incorporating the extension to certain approved non-State schools (the so-called "Fisher amendment") has caused disappointment. It was hoped that past service in such schools would be pensionable, and from the teacher's point of view this course would be more equitable. Yet it is definitely laid down that only *future* service of this kind will count. The Rules prescribe additional conditions for recognition of non-State-aided schools for purposes of pensionable service, so that, taking Act and Rules together, such a school must (1) be non-profit-making, (2) be inspected and found efficient, (3) be unable to provide pensions out of its own funds, (4) be administered by a Board of Governors under a scheme, (5) accept as members of the Governing Body three nominees of the Board of Education, (6) accept pupils nominated by the Local Authorities (such pupils to be free from any obligation as to any particular religious denomination), and (7), if requested, make suitable provision for advanced courses and for the training of teachers.

This full recognition of certain non-State-aided schools should not be confused with the recognition of not more than ten years of *back* service in *any* non-profit-making school. With regard to this service, the Rules stipulate that in addition at least ten years must have been served in recognized schools; that the total period of pensionable service shall not exceed thirty years; and that the teacher should not have been under a pension scheme of any kind at the time.

The Act, even with the Rules, still leaves many questions unsettled. For instance, no further light is thrown upon "qualifying" service, which is vaguely stated as "any employment" as teacher or otherwise "which the Treasury on the recommendation of the Board may declare to be qualifying service. . . ." Apparently such service may be in *any* school, and outside England and Wales. A. B.

THE ASSOCIATION OF SCIENCE TEACHERS.—The officers for 1919 include Miss Lees, Clapham High School, President, and Miss Saunders, Newnham College, Cambridge, Vice-President. The Association has a membership of 250. Though the membership is open to men and women, the majority of the members are drawn from all grades of girls' secondary schools, and from the Universities. They include head as well as assistant mistresses. A North-Western branch, with Liverpool as its centre, and a Midland branch, meeting in Birmingham, have been formed, in addition to the London branch, and it is expected that in the near future other branches will be established. The work of the association is carried on by a number of sectional and sub-committees. There is a permanent sub-committee to deal with examination problems, and a special joint committee, representing school and University teachers and head mistresses, is now considering matters relating to University Scholarship examinations. Full particulars may be obtained from the Hon. Sec., Miss F. Storr, 12 Angell Park Gardens, S.W. 9.

AN EAST MIDLAND UNIVERSITY.—The scheme to secure a charter of incorporation for Nottingham University College, and to place it upon the footing of a duly constituted University, continues to make progress. The Corporation of Nottingham has decided to hand over the site and buildings of the College, and to make in perpetuity a grant of £15,000 a year, when the charter for a University is granted. Under similar conditions the Nottinghamshire County Council will grant £5,000 a year. It seems probable, too, that similar support will be rendered by Leicester and Derby, and that Lincolnshire and Northamptonshire may also co-operate.

CORRESPONDENCE.

THE LEAGUE OF EMPIRE WAR MEMORIAL.

To the Editors of The Journal of Education and School World.

DEAR SIRS,—You kindly invite me to send you a line about the League of Empire and its War Memorial Buildings.

Here, at least, in this Headquarters for Teachers of the Empire, is a War Memorial which both represents an ideal and is a necessity, if the bonds which tie the Empire together and which have been drawn immeasurably closer during the last four years are to retain their strength and carry on the work of war into the days of peace.

Teachers who arrive in London from the ends of the Empire, as the fulfilment of a lifelong ambition—and this is true of scores of men and women every year—need above all things a central building where they will find friends to welcome them, a club and library, and bed and board at a modest price; where also all arrangements will be made for the best use of their time during their stay in England.

This scheme is not only imperial, but democratic: its aim is to assist school-teachers who are far from wealthy and whose one desire is to make the most of their short visit and to carry back worthy impressions and enthusiasms from their Mother Country.

Every class in the country, headed by H.R.H. Queen Alexandra, H.R.H. Duke of Connaught, and H.R.H. Princess Louise have shown a practical interest in this scheme. The Head Masters' Conference has made a contribution to it; individual schools and teachers in England and the Colonies are also contributing to this permanent Memorial of the War service and War sacrifice of teachers.

The sum asked for (£25,000) will, it is hoped, provide twenty-five to thirty bedrooms, besides a central hall and drawing room, &c.

The special work done by the League of Empire during the last seventeen years has had but one aim—to draw the schools and teachers of the Empire together by educational means. These efforts culminated in 1912, when the first Imperial Conference of Teachers' Associations was convened by the League in London. It was attended by no less than 600 delegates and representatives from all countries in the Empire. The temporary non-residential club established in 1913 was the germ of the present undertaking.

The Hon. Sec. (Mrs. Ord Marshall, C.B.E.), 48 Catherine Street, Buckingham Gate, S.W.1, will gladly send papers to any one who applies. Subscriptions to the Fund for a Headquarters for the Teachers of the Empire should be sent to Sir Philip Hutchins, K.C.S.I., Chairman of the Council and Hon. Treasurer of the League of Empire, or to me at the above address (48 Catherine Street).—Yours faithfully,

M. J. RENDALL,

Winchester, Head Master of Winchester College and
January 16, 1919. Chairman of the Executive Committee.

THE TEACHING OF HISTORY.

To the Editors of The Journal of Education and School World.

SIRS,—With the passing of the Great War, another chapter must be added to the school history book, from which the children may learn of a great crime and of a wonderful deliverance.

But we want those whom we look upon as builders to realize fully, although they may not have passed through the fire of our experience, the value of peace upon earth and of goodwill amongst men. And this depends mainly upon the manner in which not only the last chapter, but the whole book, is written, and upon the teacher's method of using it.

For an understanding of history is, to some extent, a substitute for experience, in that both are different ways of realizing the relation of a present state to past causes; the one by the active participation of the subject, the other by an effort of his imagination and intellect.

Unfortunately, at present children often only become sufficiently acquainted with history to learn of past causes in relation to events which are also past—or, alas! in some cases, in relation to nothing in particular. The average school textbook starts in the manner of

"Once upon a time there was," followed by "and this produced"; instead of "To-day there exists," followed by "because."

Since it is rarely sufficiently complete to include an end as well as a beginning, it is no true history at all; for the end is the most important part, although the most easily forgotten.

Indeed, the textbook contains an insufficient or, more often, no description of society at the present day; and the orthodox historian who writes with condescension of the cave-man and his rough dwelling, cannot spare even a foot-note to tell the ignorant children of the luckier classes about that present-day refuse-heap of a garret, in which are herded the industrial slaves of a society which boasts of freedom.

Thus there is a crying need for a chapter or two upon the history of the working classes, telling how the services they perform for the community to-day were performed in the years past; how the development of their industries has been affected by the ambition of rulers and others, and by wars; and, not least important, how they live to-day.

We cannot expect co-operation between rich and poor, between workers by brain and manual labourers, between politicians and those they rule, until sympathy has been purchased in part by knowledge.

Moreover, the textbook is misleading in another particular also. For it gives altogether too much prominence to war and its tinsel glories, encouraging an aggressive national spirit by its emphasis and colouring. If allotment of space is any criterion, it is considered more important to describe where men fought and how they fought than why they fought. Moreover, how it was that kingdoms sometimes remained at peace is obscured by the dark shadows cast by war, which at least has been political life in an abnormal, if not a diseased, state. Periods of peace are treated merely as interludes in a ceaseless war; as times of recovery from one phase and of preparation for the next.

And since the pages are overloaded by an account of events relative to war, the history of arts, and of industries, and of the common people are dealt with scantily, and therefore inaccurately. Hence that ignorance of the child and the grown-up about the manner of life of their neighbours, both he who works in the other part of the same town and he who lives across the narrow seas and speaks a different language. Of this ignorance the first fruits are misunderstanding and dislike, which give place later to industrial unrest and to war.

Obviously, all historical facts have not the same significance. We choose to teach certain of them as an essential framework around which all argument, reasoning, and knowledge must be grouped. Have we not chosen ill?

For the teaching of history has no value unless it points out how much the world owes at the present day, not merely to the successes, but especially to the failures of the past, and inspires in him who studies, no matter what his age, a determination to devote himself to an attempt to make the world better.

W. ALLEN YOUNG.

THE PERSE SCHOOL TRICENTENARY FUND.

PROPOSED TEACHERS' CHEQUE.

To the Editors of The Journal of Education and School World.

DEAR SIRS,—We shall be grateful if space can be found in your columns for the following appeal to our fellow-teachers:—

One of the outstanding educational features of the year (1918) was the Tricentenary Commemoration of the opening of the Perse School, Cambridge.

The contribution which the Perse School has made to educational progress, and the inspiration and new ideals which have radiated from it, need little or no comment. For four consecutive years Dr. Rouse and his colleagues took a leading part in the conduct of the Summer Schools held under the auspices of the "Association for the Reform of Latin Teaching." At the Perse School opportunities for observation of lessons in actual progress have been freely available to teachers for many years past. Nor is this enterprise confined to the teaching of the classics. It would be invidious almost to single out names, but we may be allowed to recall the published contributions of Mr. Caldwell Cook in the teaching of English and of Mr. L. C. de Glehn in the teaching of Modern Languages. To quote Dr. Sadler's admirable summing up of the work, "It will not be forgotten in the educational history of England. It emphasized the right things at the right time. There has been genius in it, and opportuneness."

The difficulties, however, have been great, especially those connected with the financial side of the work, though they have been largely counterbalanced by the perseverance and self-sacrificing devotion of the Head Master and his staff. It is in order to remove these difficulties and to provide long-needed extensions that an

appeal has gone forth for a "Perse School Tercentenary and War Memorial Fund." This appeal, which is supported by a large and distinguished General Committee, has appeared already in the daily press. We felt, however, that teachers as a class would not feel the personal element in this appeal which is addressed to the general public; further, that there are many teachers who would refrain from sending the small contribution which they would be willing to give, to the central offices of the fund, but would perhaps welcome an opportunity of subscribing to a small professional fund. In view of this it has been decided to open a subscription list for teachers, and we appeal to our fellow-teachers to participate in the contribution of a substantial "Teachers' Cheque." This appeal has of course the full approval of the General Committee for the Fund. Remittances by Postal Order or by Cheque should be made out to "Teachers' Perse School Fund," and forwarded to Mr. N. O. Parry, 4 Church Street, Durham.—We are, &c.,

ALICE C. CROFT (Leeds),
F. M. PURDIE (London),
ELEANOR PURDIE (Cheltenham),
EFFIE RYLE (London),
S. O. ANDREW (Croydon),
FRANK JONES (Birmingham),
N. O. PARRY (Durham),
S. E. WINBOLT (Horsham).

HISTORY AND CITIZENSHIP.

To the Editors of The Journal of Education and School World.

SIRS,—As a schoolmaster who has spent over four years in soldiering, nothing has struck me so much as the failure of our schools. The chief reason for this failure seems to have been that most men thought their school subjects were useless, and promptly proceeded to forget them when they embarked upon the serious business of earning a living. What subject has seemed more useless to boys than history? Yet history, properly taught, is the best possible training for the duties of citizenship. The war has shown that men are not lacking in the instinct of patriotism, which makes them offer their lives gladly for their country; but training, as well as patriotism, is necessary to make a man an efficient citizen. In the past many schools have taught the elements of soldiering, but all too few have touched upon even the elements of citizenship.

No doctor can be sure of treating a disease aright unless he knows something of its causes. The politician who advocates a policy as a cure for the diseases of the State is too often only a quack, and studies their symptoms and neglects their causes. The roots of our present social system lie buried deeply in the past. The causes of our discontents are to be found in our national history. Here is the schoolmaster's chance, and by teaching history with this aim in view he can enable the citizens of the future to judge for themselves. Very few schools seem to realize that history is a subject of national importance. Generally it has been the Cinderella of the syllabus, taught as an easy subject for examinations. Any master was good enough to teach it, and any textbook was used so long as it gave the facts that the examiners would be likely to require. If the teacher is given a free hand and allowed to make his own syllabus, and choose his own textbooks, he can make history at once interesting and useful.

At the school where I worked before the war only one year had to be wasted on examination work, and I was able to teach with the aim of showing my boys how our modern conditions had been evolved. During the first three years we ran lightly through English history from the Norman Conquest to our own day. In the first year we dealt with feudal life, the Crusades, the growth of a free peasantry, the work of the monasteries and guilds, and the development of architecture and the art of war. In the second year we traced the change from medieval to modern England, including the social changes caused by the dissolution of the monasteries and guilds, the widespread effects of the invention of printing, the discovery of the New World, with its wonderful influence on every side of our national life, and later the gradual growth of Parliamentary Government under the Stuarts. In the third year we studied the eighteenth and nineteenth centuries. At first we rather neglected England to follow the fortunes of her sons in America and India; but at the end of the century we returned to consider the social revolution caused by the industrial inventions, the enclosures, and the great war. In the nineteenth century we concentrated at home on the two attempts to better the lot of the people—the Government's from above by Acts of Parliament, and the people's from below by the Trade Unions. Beyond the seas we traced the growth of the small dependent colonies into a free confederation of free States.

The fourth year was sacrificed to examinations; but with those boys who stayed for a fifth year I studied historically the leading

questions of the day. Before the war we found what light history shed on the Irish question, the Empire, and conscription. When I return I hope we shall, in addition, search the past for the causes of the land problem, trace the rise of Trade Unions from their early struggles as illegal societies, and find in the history of International Law the germ of the League of Nations. My object is not to give my boys a solution to these problems, but to teach them how to solve them for themselves; to teach them that there is nothing new under the sun, and that you cannot get rid of an abuse until you have traced it to its source. As a result of this training they form the habit of thinking for themselves, and are unlikely to be carried away by gusts of popular passion to vote for measures that are historically unsound.—Yours, &c.,

A. T. L. G.

THE CENTRAL WELSH BOARD.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—In your January issue your excellent correspondent suggests that the opposition to making an application to the Examinations Council for the recognition of the examinations of the Central Welsh Board as approved examinations was due to the suspicion of some insidious action on the part of the Board of Education. Your correspondent is quite mistaken: the Board of Education were never suspected, for the opponents of the application are quite as conversant with the facts of the case as your correspondent.

The Central Welsh Board was established with a view to securing for Wales a system of education which would carry out Welsh ideals, and be adapted to the needs and circumstances of Wales, which are admittedly different from those of England. The functions and powers of the Central Welsh Board are practically confined to inspection and examination, and are becoming every year limited both absolutely and relatively. For the last ten years the Central Welsh Board has been slowly but surely bartering away its independence. Your correspondent and those who agree with him would hand over the control of the examinations to an outside body on which the representatives of the English Universities are predominant, and on which there is not at present a single representative of the Welsh University. These friends may rest assured that the significance of the proposed change is not lost upon the various Welsh Local Education Authorities, many of which are now beginning to consider in earnest whether they are justified in spending thousands upon an institution which appears to carry out to a more limited extent every year the objects for which it was established. The proposed change may produce results unexpected by its advocates.

A MEMBER OF THE CENTRAL WELSH BOARD.

COMMITTEE ON WAGE-EARNING CHILDREN.—The Committee on Wage-earning children, formed to increase the efficiency and to promote the reform of existing legislation for the protection of children in employment, has issued its eighteenth annual report. The report details the steps taken by the Committee, by amendments to Mr. Fisher's Education Bill, to direct attention to the limitation of the hours of work of children on days other than school days. The Committee has continued to watch matters affecting the employment of children and juveniles, and to keep in touch with all new local by-laws. A summary of the provisions of the Education Acts, 1918, which affect child and juvenile employment, is issued with the report. Certain weaknesses in the Act are pointed out, and among these mentioned in the memorandum are that: In localities where by-laws have not been made restricting employment, children may be employed on Saturdays and all school holidays from 6 a.m. to 8 p.m.; the permission given to local education authorities to make by-laws allowing of employment forbidden by the Act is unfortunate; no restriction is put on the total number of hours for young persons of combined attendance at class and work. In unregulated employments it will be possible for an employer to make up on the next day the hours of work lost on the previous day in going to class; no increase has been made in the age up to which local authorities may make by-laws regulating general employment. Without waiting for the appointed days, the memorandum points out, local education authorities may propose by-laws prohibiting street trading for children under sixteen years of age, restricting further the hours of work of children on school days, and on days other than school days, and on Sundays, and prohibiting or attaching conditions to the employment of children in all or any specified occupations. Copies of the Report and Memorandum can be obtained from the Hon. Secretaries 17 Tredegar Square, Bow, E. 3.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

Will Mr. Fisher give us obligatory Continuation or not? If he does not, he may possibly find himself—we write soberly and in no Cassandra vein—confronted with a general refusal on the part of working men to handle goods in the manufacture of which children under sixteen have been employed. Wild, minatory talk to this effect, hitherto insignificant, there has been, as we have reported, both in England and in the United States. At present more temperate counsels prevail. So the New York State Federation of Labour, adopting at its fifty-fifth Annual Convention (1918) a comprehensive programme of education, demanded a State law establishing compulsory continuation schools for children (who have left the elementary school) up to the age of eighteen—instruction to be for not less than eight hours a week, and to be given between the hours of 8 a.m. and 5 p.m., Saturdays excepted (*American Teacher*, VII, 9). Eight hours a week for a year of forty weeks would make three hundred and twenty hours, which, you will say, is the prescription in the English Education Act. No, no! Hardly has Section 10 specified three hundred and twenty hours when, alarmed at its own audacity, and fearful lest the children should learn something in the time, it proceeds: "During the like period [of seven years from the appointed day], if the local education so resolve, the number of hours for which a young person may be required to attend continuation schools in any year shall be two hundred and eighty instead of three hundred and twenty." And whether the "young person" will ever be required to attend a continuation school for even a single hour depends on that visionary "appointed day." When is it to dawn? Says Section 52: "The appointed day shall be such day as the Board of Education may appoint, and different days may be appointed for different purposes and for different provisions of this Act." Thus the Board of Education receive powers to appoint (in any area) a day for the purposes of Section 10; but no obligation rests on them to exercise them. Whilst Mr. Fisher is being lauded by the newspapers for having introduced into England compulsory attendance of the continuation school, his Act is, at best, permissive. The New York State Federation of Labour will hardly be content with such legislation as that.

The Declaration of the National Education Association last autumn bore fruit. At the request of that body and of the Association of College Presidents, a Bill was introduced into Congress "to create an executive department in the Government to be called the Department of Education, with a Secretary of Education, who is to be the head thereof . . . and whose tenure of office shall be like that of other executive departments." To this department will be transferred the Bureau of Education and such offices, divisions, boards, or branches of the Government as are devoted to educational matters. It will be its specific duty to co-operate with the States in the promotion of public education, including hygienic education, within the respective States. It is to work with the States in the abolition of illiteracy, in teaching the English language and the duties of citizenship to the children of immigrants, in the improvement of public schools, and especially of rural schools, as to physical and hygienic education, and in the preparation of teachers. Observe that the department is designed for co-operation with the several States, which retain, as it seems, autonomy and their highly prized freedom of initiative and administration. The sum of one hundred million dollars is to be appropriated for the service of the Department of Education; in this sum each State will share according to its needs, and according to its willingness to contribute from its own treasury new funds for the development of schools. Relationship to existing Federal departments will depend on the ruling of the President.

Education a Department of Government.

A noteworthy feature of American education to-day is the stress that is laid on its obligations in respect of public health. The Bill outlined in the previous paragraph indicates this. The New York State Physical Law, operative since September, 1917, requires fifteen minutes' teaching in hygiene every week for all high-school pupils, the instruction being given often in connexion with biology. The schools deal with the health of women in a way that the article "What Girls Want to Know" in the *School Review* (XXVI, 10) illustrates. At the Universities the medical schools are generally well organized and attractive. Conspicuous is the Medical Department of Johns Hopkins University, Baltimore. Many of its professors are of world-wide fame: its graduates are spread over the whole of America; its Report shows, even for a war year (1918), three hundred and twenty-six students; and its contributions to the literature of medicine are as important as they

Towards Health; Medical Education at Johns Hopkins.

are varied. The University has a special fund to secure the most advanced medical education for women. Into details of the courses offered and the methods pursued it were improper for us to enter here. One significant statement we extract from the Report. In admitting from outside graduates of approved institutions as candidates for the degree of Doctor of Medicine, the authorities require them to furnish evidence that they have "an acquaintance with Latin, and a reading knowledge of French and German." So in France M. A. Meillet writes in his book, "Les Langues dans l'Europe nouvelle": "Ne pas savoir l'allemand c'est presque toujours renoncer à être au niveau de la science et de la technique de son temps." We cannot agree with the patriots who deem abstinence from the study of German essential for the public health!

Perhaps in English education self-development, or, as a well-known writer puts it, "the realization of the ideal of Man by each individual in and for himself," is pursued too closely and with too narrow vision. Group-consciousness is but little cultivated, or the only group apprehended is that petty world the school. There is a form of group-consciousness which may exert a supremely beneficent influence in the New Age, the group being the Anglo-American peoples. American schoolmen are conscious of this. The National Security League, through its Committee on Citizenship, has issued a revised edition of its Teachers' Patriotic Leaflet, in which the growth of American freedom from English roots is made plain. From Wisconsin we have a tract that directs the attention of every teacher in the State to a study of "America's Debt to Britain." Is there not a recent debt of Great Britain to America, not to be forgotten? Again, an English commission, visiting the Universities of the United States, has sought to promote an intimate relationship between American and English scholars. It is proposed that a permanent commission, sitting in America, should foster the mutual investigation of educational systems. And America, experimenting freely, is developing a science of education that measures and compares results with a striving for exactness hardly known in Europe. Interesting ourselves in American experiments, we may presently make experiments which will have interest for America—joint endeavour in education welding a chain of international friendship.

The United States and Britain.

FRANCE.

We shall be told presently how of old the *Raubkriege*, or predatory wars, of Louis XIV, and then the Peace of Ryswick, deprived Germany of Elsass-Lothringen; more modern and relevant are the facts that the territory was torn from France by violence in 1871 and that France has never acquiesced in the loss. A few months ago there was "no Elsass-Lothringen question for Germany"; to-day there is no Elsass-Lothringen question for France. A ministerial circular (*Bulletin Administratif*, No. 2,354) asks for the names of officials and teachers who will be disposed to take service in the *lycées* and *collèges* of Alsace-Lorraine. A knowledge of German, says the circular, will be regarded as important. In a speech delivered at the prize distribution, Massevaux, last summer, M. Lafferre, Minister of Public Instruction, promised that the retransference should be accomplished tenderly. France, he said, would look on Alsace not as a conquered country, but as a province that had remained French and was doubly dear for its sufferings. Alsations might have full confidence; their personal rights would be safeguarded and the regional language left them until a new generation should have possessed itself fully of the beautiful French speech. The different forms of worship would be respected. In a word, the freedom of Alsace would be a sacred trust. We remember that the Germans used to deride the German spoken in Alsace; hardly will the new French be more pleasant to their ears.

Will this "année d'attente" (*Revue Universitaire*, XXVII, 10) bring a great remodelling of the whole French school system? We doubt it, but report as faithful chroniclers that the movement in favour of *l'école unique* seems to gain ground. Prominent in advocating it is the society called "les Compagnons." The primary school—the term *école primaire* carries us back to 1789—is the school in which the children of the people receive elementary instruction conceived as a sufficient whole. The Revolution abolishing castes left classes, and the children of the *bourgeoisie* are taught in private schools or in the lower forms of *lycées* and *collèges*. This, say the reformers, makes against *égalité* and *fraternité*. There should be solidarity—instead of the three existing orders, primary, secondary, and higher, three stages: the *école unique* at the base for all children up to the age of fourteen; then the *lycée* with a five years' course in the humanities or in vocational subjects;

L'Ecole unique.

lastly, the University. Against the change it is pointed out the *école unique* would be embarrassed by the necessity of supplying at once a complete and a preparatory education; that the *lycée* with its present sections and encyclopædic programmes would be abruptly disorganized; and that *l'enseignement libre*, or non-State education, would have to be suppressed—an outrage on the Catholic world. In fine, there are both pedagogic and social objections to the scheme, not to be surmounted easily. It is a French question, and we leave it in France. By the Education Act, 1918, we English have chosen our course; it remains for us to sail it—with such accelerations of speed as a progressive age demands.

CEYLON.

For well-known causes Education Reports have recently been compiled slowly and arrive late. That just received from Ceylon covers activities in the year ended December 31, 1917. The total number of pupils returned as attending school is 395,809, an increase of 5,375 in twelve months and spread over both Government and grant-in-aid schools. Whilst in the Province of Uva, with steep hills and detached villages, the proportion of children attending school to population is only 1 to 39, for the whole island it is 1 to 11—a not unsatisfactory state of affairs. There is a general demand in Ceylon for English, "more English and better English," and the authorities hope to improve the quality of that supplied in certain unaided schools. Of 113 candidates presented for the January Matriculation of London University only 24 passed. The teachers find Latin a stumbling block. They contend that it should not be taken until the pupil has a thoroughly sound knowledge of English; and, says the Report, "so long as Latin is required for admission to the Ceylon Medical College, and its study is encouraged for the London Intermediate and the Cambridge Senior, so long must hundreds of victims be sacrificed for the 'higher education' of the few." Sanction has been secured for a University College, to be affiliated to the University of Oxford. Oriental studies are being fostered; the monasteries of Ceylon contain a wealth of Oriental learning which may be revealed through the medium of English.

The Report, we say gratefully, does not disdain the element of humour. It illustrates, for example, excess of zeal by the case of the head teacher of a large Government vernacular school in the Southern

Province, who, in order that he might the better illustrate to his class the principles of elementary anatomy, dug up his deceased aunt, hanging her skeleton up to dry in the garden in order to obtain a perfect specimen of a human skeleton. Unfortunately he had not consulted all the poor lady's relations, and one of them, being on bad terms with the teacher, lodged a complaint, which resulted in the teacher's being fined Rs. 15 under Section 292 of the Ceylon Penal Code for "offering indignity to a human corpse," the magistrate in his judgment remarking, "the complainant is the son of the deceased, and his natural indignation could not have been expected to abate at the thought that the remains were taken to teach anatomy to urchins." It is so that enthusiasm for science is rewarded in Ceylon. What better lot could any aunt desire? Again, the perils which hang over teachers in remote country districts are exhibited by means of the following letter, a model of epistolary style:—"I have the honour to inform you that I went to Puttalam kachcheri to draw my pay. On my return to school on the 28th instant I met a wild elephant of immense size. So we (myself and cooly) ran quickly as our feet could carry us, and made our escape by climbing up to a tree like a monkey, in which we spent about four hours. Fear and hunger prevailed us. The elephant did not see where we went. So it watched our coming again. I told the cooly to-day is our last day, and make ready for the death. Shivering with fear, turning face to face, bewailed our misfortune. Fortunately, I saw two village peasants who are going on to the same direction. I whispered them and explained them what happened. At the conclusion of my talk they wondered our escape. These fearless brave men drove the animal, making a noise, so our escape was at an end. Please consider, Sir, what shall I do if I did not meet these men? One side I am suffering from such fears, while on the other with sick. Where is my comfort then, Sir? I beg most obediently to release me from one of them."

QUEENSLAND.

In the year 1917 the Queensland Government spent nearly £724,000 on education, £570,000 out of that sum on primary education. The medical inspection of school children cost £7,370. There were fifteen technical colleges in activity—three

Education—
General and
Vocational.

directly controlled by the Education Department—with a total enrolment of 9,632 students. Increased attention to, and expenditure on, technical and vocational education are interesting notes in late reports from Queensland. The most recent developments, intrinsically vocational in their aim, include the establishment of trade classes and classes in domestic science. Instruction in commercial subjects has been amplified, with the result that the number of classes and students has been greatly augmented. Commerce and domestic science—these form by far the most popular branches of vocational education. The University of Queensland has recently formulated the conditions upon which it is prepared to grant to students a Commercial Certificate which will serve as a guarantee that the holder possesses knowledge which will fit him to embark on a commercial career with prospects of success.

UNIVERSITIES AND SCHOOLS.

WALES.

The University of Wales has arranged to give certain privileges to boys who would have become University students if they had not entered the Army. The concessions are not as generous in many respects as those granted by some other Universities, notably the Universities of Cambridge and Oxford, but they do undoubtedly constitute a great relief to boys whose studies have been interfered with by military duties. The University allows them to be provisionally matriculated on the recommendation of one of the Colleges, and they can therefore enter on their degree courses at once. The next two terms can also count as equivalent to a full year's course. The University also debated a proposal to allow students to enter after a shortened course for a special War degree or diploma, but finally rejected it, probably for the reason that the value of such a degree to its recipient would not be very great. With the return of old students whose courses were interrupted by the War, and the influx of new students, the University Colleges have practically reached their pre-War standard of attendance, but their work is, to a certain extent, handicapped by the difficulty of securing the return of members of the staffs.

One of the most interesting suggestions in the Report of the University Commission is that referring to the establishment of a Secondary Schools Committee, on the lines of a similar Committee already in existence at the University of Durham. The main functions of

such a Committee would be to discuss questions which lie across the frontier of school and University teaching, such as the standard of Matriculation and possible overlapping between school and University; standing Sub-Committees might also be established for each subject which is taught, both in the last year at school and the first year at the University. These and similar questions might, it is suggested, be discussed profitably between representatives of the University Senate, the Central Welsh Board, and the head masters and head mistresses of secondary schools in Wales. A Conference has been convened already to consider this recommendation, and it is possible that a frank interchange of opinion on the point of contact between the University and the schools will be mutually beneficial. The schools are very desirous of facilitating the work of the University and do everything in their power to increase its efficiency, and therefore it is important that they should learn at first hand in what respects they can do so. The University also, by a generous scheme of recognition of the actual work of the schools, can materially lighten the work of preparation for the University and largely minimize the examination evil, about which we hear so many complaints. The attitude of the University to the First and Second School Examinations, for instance, is a matter of great importance to the schools, and will go far towards fixing the nature of the most advanced work in the schools. Perhaps it would not also be out of place to utter one word of caution with regard to such a Committee. Its success, in our opinion, depends altogether upon its exercising purely advisory functions; any attempt to claim definite powers of control would most likely lead to friction and trouble.

Prof. Marshall, Professor of Greek, has been appointed as Principal of the University College, Aberystwyth, during the absence of Principal T. F. Roberts who is ill. It is a rather remarkable coincidence that two out of the three University Colleges should, at this critical period of the history of the University, be without principals.

Mr. A. C. Wright of Borth has purchased from Lord Mostyn the famous collection of Welsh Manuscripts in the Mostyn Library, and he has presented it to the National Library of Wales. The collection is the most valuable private collection which has not yet found its way to the library. The National Museum has also published its annual report. It is

National Library
of Wales.

proposed to establish a Welsh Naval and Historical Section, in which weapons used in the present war will be exhibited, as well as paintings and sculptures depicting the achievements by Welsh men and women in war.

Mr. H. F. Maugham, K.C., has published his report on the Salary question in Carmarthenshire, which on the whole seems likely to end this unfortunate dispute. The Swansea and Cardiff Education Committees have also reached a settlement of their disputes with the elementary school teachers, and in each case, considerable advances have been made. The Swansea scale is particularly generous, and compares favourably with any scale in the country. The uncertificated teachers are, however, still clamouring for more. In the latter case the scale proposed by the N.U.T. is the one which has been adopted with but slight modification.

SCOTLAND.

The report of the Council of the College for the past year states that the number of students enrolled was 150 (70 men and 80 women), an increase of 40 over the previous year. The income for the year was £14,556, and the expenditure was about the same; but the expenditure included a transference of £1,100 to capital reserve account in order to provide for liabilities which may be expected at the close of the war. Prof. Patrick Geddes, who was appointed to the Chair of Botany in 1888, retires at the end of the year after 30 years' service in the University.

Mr. George Bonar, President of the Dundee Chamber of Commerce, has given £25,000 to establish a scheme of commercial education in connexion with University College, Dundee. One of the conditions of the gift is that a degree of Bachelor of Commerce shall be established, and that University students seeking that degree shall not be compelled to pass a preliminary examination or to have come from higher or secondary schools; but that boys or youths who present themselves shall be admitted if they are able to show that they are capable of improvement and of undertaking University study.

The University has received a number of valuable benefactions. The most important of these is the contribution of £60,000 by Mr. W. G. Gardiner and Mr. F. C. Gardiner, prominent business men in Glasgow, for the endowment of three new Chairs, one in Organic Chemistry, one in Physiological Chemistry, and one in Bacteriology. The stipend of each of the Chairs will be £1,000 a year, and the Chairs will be named after the donors. The Chair of Chemistry, founded in 1817, is at present vacant, and when the foundation of the new Chairs is completed, the University will have three Chairs in the subject, as well as several Lectureships. Sir Joseph Maclay, Bart., has given a sum of £262. 10s. to provide for five years the stipend of a Lecturer in Clinical Tuberculosis. A Professor in the Faculty of Medicine has given £800 for the institution of a bursary in Medicine, and also £350 for the purpose of establishing a prize for the best essay on some subject in the history of Medicine. The University Court has prepared a draft Ordinance for the institution of a degree of Ph.D. The degree may be taken in any Faculty by graduates of approved Universities, who have prosecuted a course of special study or research in the University for three academic years (or in exceptional cases for two years), and have submitted a satisfactory thesis. In order to avoid confusion between the new degree and the degree of D.Phil., which is conferred for original work in Philosophy, the Ordinance abolishes the D.Phil. degree and allows the present holders of that degree to receive a diploma conferring upon them the degree of D.Lit. in Philosophy.

The Annual Report of the University for the year 1917-18 states that the total number of matriculated students was 2,091 (1,339 men, and 752 women). Over 5,000 members of the University have served in the War, and the list is still incomplete. Between 600 and 700 have given their lives, and many honours have been won, including two V.C.'s, 95 D.S.O.'s and 328 M.C.'s. The Royal Edinburgh Asylum for the Insane has submitted to the University Court a scheme for the establishment of a Chair of Mental Diseases, with an endowment of £10,000. An anonymous donor has offered an annual subscription, for a term of years, towards the endowment of a Tait Chair of Mathematical Physics.

The four Universities, after joint conference, have approached the Treasury for an increase of Government grants, on account of the losses which have been incurred owing to the war, and of the need for University development in the future. At the request of the Treasury the Universities have prepared a statement of their needs for the current academic year, and it is expected that grants to meet these needs will be included in the Parliamentary Estimates, which will be submitted to the House of Commons early in the new Session. The total amount of money for which the Universities are asking is very large, and the purposes for which it is desired include substantial increases in the salaries of the staff and provision for deficits in income, for research

work and equipment, and for buildings to accommodate the large number of students who are returning to the Universities or entering on a University career. At some of the Universities it is already becoming impossible to provide accommodation for all the students, and a considerable increase of the teaching staff is necessary. Glasgow University announces that students who intend to enter the Faculty of Medicine in May must intimate their intention before the end of February. Preference will, of course, be given to students returning from war service, and others will be allowed to matriculate only so far as there is accommodation for them.

The Education Department announces that owing to the serious interruption to school work in many districts during the past six or eight months, through the prevalence of epidemic sickness, steps are being taken to ascertain the extent to which individual schools have been affected through compulsory closure or otherwise, in order to have all the facts before them when the results of the leaving certificate examination are being assessed. The postponement of the date of the examination has been found to be impracticable, but a change is being made in the setting of the papers. Hitherto, Section II of each of the mathematical papers, except Lower Grade III, has consisted of pairs of alternatives, one or other of which has to be chosen. In 1919 this limitation of choice will be removed, and the candidate may select the two questions which he decides to answer from any of the four which the section will contain.

IRELAND.

Our last number went to Press before the complete results of the Parliamentary elections were known. We referred to the University candidates and their views on educational reforms. The Members elected for the Universities are four in number, and from the academic point of view may be regarded as satisfactory representatives, three of them being Professors of their University and the other being a former Member. Dublin University returned Mr. Samuels, the Attorney-General, and Prof. Sir R. Woods; Queen's University, Belfast, Prof. Sir Wm. Whitla; and the National University, Prof. J. McNeill. The last-named, being a Sein Feiner, will presumably not take his seat; the others are all Unionists, and the two Professors are both medical men and will be useful Members on questions of health and housing. They and Mr. Samuels have expressed themselves sympathetically towards the needs of Irish teachers.

Reconstruction and other similar words are in the air. In Belfast the question of educational reform has already been taken in hand, and it is stated that a Bill is being drafted for immediate introduction into Parliament on the lines of local self-control for Ulster. That is to say, in Ulster the schools would come under Local Authorities as in England, with local rates administered locally by County Councils, and so on. It is not certain whether this proposal is seriously intended or is meant to force the question of educational reform on the attention of the Government. It is very far-reaching, and presumably Ulster would want its share of the present Treasury and other grants, and also a Board of Education of its own, and these matters would involve controversy with the rest of Ireland. It raises, in addition, the religious question in connexion with school management, and this is a serious difficulty even in Ulster. The Roman Catholics object to it as likely, in their opinion, to lead to undenominationalism, and Mr. Stephen Gwynn, as a desperate remedy, suggests that for Ireland generally the Protestants and Catholics should each be given their share of grants and allowed to run their education separately in watertight compartments. One side of the question of local rates for education in Ireland is that the lack of them affords the Treasury an excuse for refusing aid. The argument is: Why should not Ireland pay local rates as well as Great Britain? On the other hand it is generally felt that local control would not be satisfactory in Ireland. Apart from the formidable religious difficulty, the Local Authorities are lacking in expert knowledge and are likely to be swayed by other issues. Besides, there is in many parts no sufficient population for a local secondary school. The proper solution of the question seems to be the payment of a rate levied locally over the whole country into a central fund administered by experts and advised by a body representing the localities. As a parallel, in England the London County Council imposes a rate collected by the local County Councils, and administers centrally the education of a population far larger than that of Ireland. Such a solution would permit of freedom and progress in the schools and would comply with the demands not only of Ulster but of the whole of the country.

The Juvenile Labour Committees in Ireland found themselves faced with a serious difficulty in December when they received instructions from the Ministry of Labour that they should extend the age of young persons to whom they were to give advice and assistance from seventeen to eighteen, and were told that boys and girls between fifteen and eighteen

were to receive out-of-work donations of 12s. and 10s. a week respectively, on condition of joining a course of instruction approved by the Board of Education or other Central Department concerned. There being no Central Department of Education, the Dublin Labour Committee found that boys and girls were getting the pay without fulfilling the condition; but it is satisfactory to know that the Department of Technical Instruction promptly acceded to the request of the Committee to inaugurate the necessary classes with the least possible delay. The moral is twofold. There should be in Ireland a central educational authority with the whole of education under its direction, and the conditions now being established in England of continuation schools for youths up to eighteen years should be introduced into Ireland.

In the matter of reconstruction the Irish County Councils' General Council, in their recent report, point out the desirability of placing the science of agriculture on its proper plane in the educational curriculum. They had approached the Governing Body of University College, Dublin, with a request to consider the advisability of establishing a Chair of Scientific Agriculture. The College, however, had no funds to spare, and the Council therefore suggested that, in view of the vital and growing importance of agriculture in the economic conditions of the country and the paramount importance of its development on scientific lines, the Irish County Councils should take up the foundation of the suggested chair. The County Councils have agreed to the suggestion, each county will contribute not more than £20 a year and the General Council have undertaken to contribute one-half of the annual salary of £600 for a Professor of Scientific Agriculture in University College, Dublin.

The Intermediate Education Board have issued the time-table of their examinations for the present year. The Examinations will begin on Tuesday, June 10, and continue into the following week until Wednesday, June 18. They follow the same lines as last year.

The Association held its annual meeting in January and elected Mr. J. H. Kane as Chairman for 1919. It passed the following resolution: That it strongly protests against the failure of the Irish Government and the Intermediate Board to publish reports for 1917-18 showing the allocation of the Fisher equivalent (£50,000) grant, and the Birrell (£40,000) grant respectively and calls for their immediate production. The rules for the distribution of the Birrell grant for the present year are still unpublished.

The Department of Agriculture and Technical Instruction, which now have a new Vice-President in Mr. H. T. Barrie, who was Unionist Member for North Londonderry in the last Parliament, have issued forms relating to examinations for teacherships in training in the Metropolitan School of Art, Dublin, to be held on June 17, 18, and 19; to a special examination for teachers' qualifications in manual training (woodwork) to be held on June 17 and 18; and to an examination in the principles, methods, and history of education to be held on June 21 for persons provisionally recognized as teachers of experimental science. Particulars of these examinations are to be obtained on application to the Department's Offices in Dublin.

ASSOCIATIONS OF HUMANISTIC STUDIES.—A joint meeting of the Classical, English, Geographical, Historical, and Modern Language Associations was held on January 9. Mr. Fisher was unable to attend, and Sir Sidney Lee presided in his place. Mr. Fisher, in a letter explaining his absence, said that the newer studies suffer under initial disadvantages: teachers have to be trained, textbooks written, and methods of instruction elaborated. Science and modern languages may not, consequently, be in a position immediately to take full advantage of all the school hours demanded by their more extreme advocates. Until head masters are prepared to give to different studies only so much time as can be used profitably, the balance of studies cannot be corrected beneficially. Sir Frederic Kenyon gave an address on co-operation in educational progress, in which he urged that one of the lessons to be learnt from the war is that a more prominent place should be given to the teaching of patriotism in the general education provided by our schools. We must embark, he said, on a course of education inspired by higher ideals. Four principles must be aimed at: training in moral character, in patriotism, in respect for knowledge, and in mind cultivation generally.

ROYAL INSTITUTE OF PUBLIC HEALTH.—A seventh course of lectures and discussions on "Public Health Problems under War and after War Conditions" is being held in the lecture hall of the Institute, Russell Square, W.C.1, on Wednesdays at 4 p.m. Among forthcoming subjects may be mentioned: "Women's Place in the Ministry of Health," by Viscountess Rhondda, on February 12, and "After-War Reconstruction—Social and Medical," by Sir Thomas Oliver, on March 12.

REVIEWS AND MINOR NOTICES.

THE STORY OF A STRENUOUS LIFE.

Canon Barnett: His Life, Work, and Friends. By his WIFE. 2 vols. (28s. net. Murray.)

It has become a custom to commemorate in a couple of stout volumes the deeds of men who have played a conspicuous part in their day and generation, but it is not always that the custom is so honoured in the observance as in the case of the subject of this biography. For Canon Barnett was undoubtedly a great man. He was not distinguished as a preacher or writer or scholar or thinker: his greatness consisted in seeing certain important truths with crystal clearness and in working with infinite patience, tact, and wisdom, in order to get them realized. He was a great social reformer and a great, though not a professional, educational reformer. We suppose he would hardly be considered a great Churchman, though that title will not be denied him by those who think it more important to demonstrate in practice what a church can do for the people than to promote the special interests of an ecclesiastical system.

We have no space here for comment upon the mass of interesting detail given in these two volumes; we can only draw attention to a few of the leading features of those parts of Canon Barnett's work which naturally come home to the business and bosoms of our readers. The dominating principle of his social work was that, if you are to do any good with the denizens of our slums, it is useless, or at any rate quite insufficient, to deal with them in the lump; you must go into the highways and hedges, and there work by individual approach and by personal contact. You may find God's image very hard to discern in the human scarecrows that meet your gaze, but it is there all the same, and to recognize it and bring it to light is your one hope of success. Moreover, to try to save their souls by "gospel preaching" before illuminating their minds and cleansing their bodies is to put the cart before the horse. And, in this task of disseminating sweetness and light, the Churchman did not disdain the help of suitable men of all creeds: hence the breadth and force of the movement for University settlements which he inaugurated at Toynbee Hall, and which has so abundantly justified itself.

In his more strictly educational work, Canon Barnett was equally clear-headed and far-seeing. So long ago as 1886 he introduced handwork into the school at St. Jude's, White-chapel, though only to find that the Department refused the grant because the introduction of "technical subjects" into the time-table had been illegal! He strove for the principle of continuation schools, and did what could be done to carry the principle into practice, long before there was any chance of such schools being provided by law. He saw how poor were the results achieved by the elementary schools of the early eighties, and how little was to be hoped for until "payment by results" had loosened its grip, and until remedies were found for the narrow outlook of the perky, half-educated elementary teacher of the time. He saw that the real remedy lay in opening up the Universities to the teachers, and he was a chief pioneer in the movement which enabled teachers to get their training at the Universities, and which brought the older training colleges to some extent under University influences.

These are but a few illustrations of the magnitude of Canon Barnett's achievement. But, in regard to nearly all that he did, we are bound to couple with his name that of his devoted and gifted wife, whose work in compiling this record has necessarily been almost as much autobiographical as biographical. The story of these two strenuous lives must be read by any one who would understand social and educational progress during the last thirty years.

GEOGRAPHY.

Highways and Byways in Northamptonshire and Rutland. By H. A. EVANS. With illustrations by F. L. GRIGGS. (6s. net. Macmillan.)

and Byways in Oxford and the Cotswolds," is an admirable addition to a fascinating series. Mr. Griggs, whose work is so well known in connexion with "Highways and Byways," again contributes of his best in a hundred or more drawings; and the name of Mr. Emery Walker is a sufficient guarantee of the clearness and accuracy of the map which has been specially drawn to indicate the positions of places, antiquities, &c., mentioned in the text. This is just the literature to turn to for relaxation at the present time when, as we trust, a new era of peace is dawning for the Old Country. With Mr. Evans as our guide we roam contentedly in imagination through "haunts of ancient peace" and share his evident love for the English country side and old country life. The book is cleverly written and delightful to read, for on every page there is something to interest or entertain. The reader who is familiar with Northamptonshire will realize with pleasure that the author has brought out the individuality of the county; and the critic will note that he has been most painstaking in his researches and most careful in the selection of his subject-matter.

"Arnold's Modern Geographies."—(1) *England and Wales*; (2) *The British Isles*. By A. A. DAVEY. (9d. each. Arnold.)

Teachers of geography should examine these little books carefully; they provide an introduction on modern lines to the geography of the homelands. The language is sometimes a little difficult for junior forms, but for rapid revision in higher classes they should be very useful. The maps are instructive, though in a few cases a little crowded.

"Nisbet's Self-Help Geography Series."—*World Communications by Land, Sea, and Ocean*. By H. R. SWEETING. (2s. 6d.)

This very attractive book dealing with means of transport will form a useful supplement to the ordinary textbook of geography in higher forms. The amount of time in school given to geography is usually so limited that we fear Mr. Sweeting will have to be content with the pupils' out-of-school hours. The book ought to be in every school library, for its brightly written text and the excellent illustrations will make it very popular.

Geography Stories. Told by FAMOUS TRAVELLERS. Book II. (1s. 6d. Nisbet.)

If boys and girls can be got to read these well-chosen extracts from the writings of famous travellers and naturalists their interest will be aroused and their knowledge of geography improved. The illustrations add much to the attractiveness of the book.

MISCELLANEOUS.

L'Horticulture antique et le poème de Columelle (De Re Rustica, Livre X). Par LIZZIE B. MARSHALL. (Hachette.)

Miss Marshall, sometime Head Mistress of the Kirby Secondary School, Middlesbrough, studied under Prof. Lafaye, who holds the chair of Latin at Paris, and who contributed the articles on "Hortus" and "Villa" to Daremberg and Saglio's well-known dictionary. The volume before us is a thesis that has been accepted by the University of Paris for the Doctorat de l'Université. It shows wide and careful reading in the ancient classics. About half the book is taken up with a full and interesting account of Columella's work, which affords evidence not only of technical knowledge but of literary taste. A separate chapter is devoted to Virgil's Georgics, and in other parts of the book we find references to Homer, Theophrastus, Pliny, and many more, including modern writers like Rapin and Mason. The interest that has in recent years been aroused in school gardens is growing rapidly; and therefore this well written volume should find a welcome place in the school library.

The Writers' and Artists' Year Book. Edited by G. E. MITTON. (3s. 6d. net. Black.)

This is the twelfth annual issue of a directory designed to meet the needs of free-lance writers, artists, and photographers. Details are given for the first time of Australian and New Zealand weeklies and the Canadian papers, hitherto run in with the American periodicals, are now sorted out by themselves. Those of our readers who aspire to journalistic work should study carefully the information and advice contained in this useful work of reference.

The Fleet Annual and Naval Year Book, 1918. Compiled by LIONEL YEXLEY. (4s. 6d. net. Chapman & Hall.)

This is the thirteenth issue and the fourth great War number of this inspiring annual. Its appearance, owing to many adverse circumstances, is somewhat belated, but its glorious history of the Navy's work from July 1, 1917, to June 30, 1918, makes up for any delay. The story of Zeebrugge and other mighty deeds of valour are all chronicled in official language, and a special supplement contains the names of all the ships in the Royal Navy, together with their commanding officers at November, 1918. The volume concludes with a further list of the "Navy's Immortal Names."

PITMAN'S BOOKS FOR SECONDARY SCHOOLS

THE FESTIVAL BOOK FOR MAY-DAY PASTIME AND THE MAY-POLE

JEANETTE E. C. LINCOLN.

Many inquiries from schools and colleges in various parts of the country relative to the May-pole and May-day programmes, and the desire to aid in perpetuating this beautiful annual custom prompted the writing of this volume.

Size 8½" x 11½". 3/6 net. Illustrated.

THE PLAYGROUND BOOK

HARRY SPERLING.

The main motive of this book is to present a choice of the very best games and dances adapted to playground conditions. They are all of the kind that children delight in. Complete with illustrations and music.

Size 8½" x 11½". 2/- net. Illustrated.

THE SELBORNE SERIES

NATURE STUDY READERS

C. G. KIDDELL, B.A., F.L.S.

These books form a delightful introduction to Nature knowledge in the plant and in the animal world. The illustrations are in colour and in black and white, and are of a particularly fine character.

MUSIC.

The Five C's. By HENRY E. PETHER.
(2s. net. Francis, Day, & Hunter.)

An ingenious attempt to assist the beginner to understand at the outset the notation of lines and spaces, and its relation to the keyboard, rather than to "learn his notes" by rote and tedious practice. The lines and spaces are treated as they should be, as continuous instead of in two unrelated chunks, one for the left and one for the right hand, and the C's of the piano are used as pegs on which the other notes depend. The keyboard is thereby mapped out in octaves, with the centre C as pivot between the hands and between the notation lines. Time values are also treated graphically. The verbal instructions are short, apt, and clearly printed.

Sight-Reading Exercises (Pianoforte). By CHARLES RAYMOND.
(In Four Books, 1s. 6d. net. Weekes.)

They should be a useful adjunct to the pianoforte teacher who seeks to help his pupil by systematic training in sight-reading to enjoy reading music, other than the pieces he studies, just as he does books. The books range from very easy to moderately difficult, and consist of short pieces, half- and whole-page long, which are fresh, musical, and fanciful, and graded in difficulties of note reading, rhythm reading, part playing, change of key, and stretching power, as well as in their demands on the young pupil's growing understanding and interpretative power.

SCIENCE.

Junior Grade Science. By G. A. WATSON.
(3s. 6d. net. Macmillan.)

The new syllabus of the Department of Agriculture and Technical Instruction for Ireland is responsible for the production of this little book. A first year course is provided in physics and chemistry, the scope of the work being very similar to that which has been current in English secondary schools during the last decade. The excellent manuals of Prof. Gregory and Mr. Simmons have been freely drawn upon for subject matter and diagrams, so that it may be taken that a sound and lucid scheme is provided. The book is admirably illustrated and should prove of great assistance to teachers in Irish schools.

A Complete Course of Volumetric Analysis. By W. J. BOONE.
(3s. 6d. net. Blackie.)

The author has collated a good general course in elementary volumetric analysis suitable for Intermediate University examinations.

Commencing with a chapter on the measuring apparatus employed, he deals with indicators, acidimetry and alkalimetry, oxidation methods, precipitation methods and miscellaneous exercises. The treatment throughout is sound and the book should be useful for those students who require just sufficient assistance in the subject and do not purpose an extended study of Chemistry.

Tommy Smith again at the Zoo. EDMUND SELOUS.
(2s. 9d. Methuen.)

Many young readers with an interest in natural history will welcome this sequel to "Tommy Smith at the Zoo." To read these bright imaginary conversations with selected animals will do much to strengthen the impressions made by a visit to the Zoological Gardens at Regent's Park. Mr. Selous this time selects the polar bear, the great bird of paradise, the hippopotamus, the giraffe, the snowshoe rabbit, the sea-bear, and the wolverine.

A Health Reader for Girls. By AGNES L. STENHOUSE and E. STENHOUSE.
(3s. 6d. Macmillan.)

This nicely produced volume well maintains the reputation which Mr. Stenhouse has gained as a clear and forcible writer of books for young students of science. With the aid of Mrs. Stenhouse he has succeeded in providing girls with an interesting and trustworthy guide to the laws of health, and the proper management of babies. The book should gain a wide popularity in girls' schools.

"Nisbet's Nature Readers." Senior Book.—*Nature Stories and Studies.* By FAMOUS NATURALISTS. (2s. 3d.)

In schools where it is still customary to encourage a love of Nature by reading about her wonders, such a book as this will be welcome. The extracts from Richard Jefferies, Gilbert White, Ruskin, Kingsley, and others, cannot fail to inspire boys and girls to desire a first-hand knowledge of plants and animals in their natural habitats; and if the book sends its readers direct to Nature itself it will have been successful indeed.

Classroom Experimental Science. By HERBERT MCKAY. First, Second, and Third Year Courses, 1s. 6d. net each; Fourth Year Course, 2s. net. Evans Bros.)

This set of four little books on elementary physics and chemistry appears to be intended for use in elementary schools. The volumes

(Continued on page 114.)

GEOGRAPHY IN EDUCATION.

PHILIPS' HUMAN GEOGRAPHIES.

By JAMES FAIRGRIEVE, M.A.,
and ERNEST YOUNG, B.Sc.

Crown 8vo, with Coloured and Black and White Illustrations.

This series of elementary books is just what its name denotes—human. Everywhere the human note is predominant and the relation of man to his environment insisted upon. The books are not merely human in the sense that they treat of geography from the human point of view, but also because the kinds of human beings who live in different environments are fully described.

They are human, too, because they take account of the characteristics of the small human beings by whom they will be used. The books are written by men in actual touch with the problem of teaching young children, and they are written in a simple and interesting fashion. They are as logical as a proposition in geometry and almost as interesting as a fairy tale.

The series is distinctly progressive both in difficulty of language and of ideal. The first two volumes deal respectively with child and adult life in certain typical areas. Volumes III-VI cover the world on new and original lines.

The illustrations are new and novel and are specially drawn to suit the purpose of the lesson.

Book I.—CHILDREN FAR AWAY.
THE LIFE AND DOINGS OF CHILDREN
IN OTHER LANDS. Price 1s. 6d.

London: HUMPHREY MILFORD,
OXFORD UNIVERSITY PRESS, AMEN CORNER, E.C.4.

are arranged on the concentric method. In the first year pupils are introduced to general physics, heat, light, magnetism and chemistry; and in succeeding years their knowledge of these subjects is enlarged, while in addition static electricity is introduced in the second year, sound in the third year, and current electricity in the fourth. The author expects that the numerous experiments, which can be carried out with very simple apparatus, will be performed by individual boys and girls and that class lessons will follow the practical work. In those elementary schools where this procedure proves to be possible, the children should—under the guidance of a teacher with a knowledge of the methods of science—form habits of careful observation and accurate reasoning. They will certainly discover what fascinating subjects physics and chemistry are when studied experimentally.

PRIZE COMPETITIONS.

THE prize for the January competition is awarded to "Corydon." *Proxime accessit* "Fortune le veut."

The winner of the Translation Prize for December is Mr. E. Latham, 61 Friends Road, Croydon.

Extract from Von Sybel's "Die Erhebung Europas gegen Napoleon I."—Wellington.

BY CORYDON.

Everywhere, in attack and defence, in youth and age, he was ever the same, ever calm and self-possessed, a nature of indomitable energy and thoroughness. There was no poetic touch, either in his appearance or in his demeanour; no compelling charm, no fire of passion. In social intercourse he was formal, stiff in his bearing, methodical to pedantry, and it often cost him a painful struggle to express himself. In his political views he was an uncompromising Tory, filled with hatred against the Revolution out of which Bonaparte's despotism had sprung; but, at the same time, he failed to understand the undisciplined enthusiasm of the Spanish people—a lack of appreciation which in many ways hampered the

accomplishment of his great task. At the same time he was penetrated, through and through, by a haughty British sense of nationality, with which he looked down upon his European allies at well as upon his Indian adversaries, and considered an uncompromisingly selfish policy as quite a matter of course. But his life shows, as no other life does, what a source of infinite happiness and mental endowment springs from a sense of duty firm as well-tempered steel. He had set his will upon the right, and bent in subjection to this will every fibre of his being. While Napoleon liked to talk of his "star," Wellington took as his motto the saying *Virtutis Fortuna comes* (Fortune is the handmaid of merit). Although he had been denied the fresh spontaneity of an Achilles or an Alexander, buoyant and loud in its joy of battle, yet he possessed in its stead a limitless self-mastery, that self-mastery which not only tames the passions, but also raises itself to the performance of any deed, because that is its will. This heroic exponent of the most deliberate defensive, nevertheless, when he had once resolved upon it, dashed forward to the attack as energetically, as hotly, and with as irresistible a fury, as the wildest fanatic—with this difference that, when his task was accomplished, still breathless from the strain, he immediately passed on his way once more, with grim concentration, cool and deliberate. In this way he chained Fortune, the object of his contempt, fast to his standards; although not to be compared with Napoleon in genius, he became the "world-victor's victor"; and his life was a unique testimony to the truth, so often misunderstood, that, after all, in human affairs, a great character weighs more than the greatest intellect.

There was no version which had not several mistakes; and to the prize winner we suggest the following emendations:—*seiner bewusst*, "conscious of his powers"; *trocken*, "dry"; *regelmäßig*, "correct"; *vielfach erschwert*, "made many times more difficult"; *verkannt*, "ignored"; *aber auch* has no contrasting force, say "nor did he understand." For *Nationalgefühl*, "pride of race" is the best equivalent; *froh aufjauchende* is difficult; "that shouts for joy in the day of battle" gives the meaning, but it is lengthy and not in harmony with the closely knit style of the original; "jubilant" was favoured by many, and is a fair rendering. Von Sybel's translation of *virtus* by *Tüch-*

Corrected slips for the ANNUAL
Directory of Educational Associations

MUST BE RETURNED BY FEBRUARY 5th, TO

Mr. WILLIAM RICE, 8 LUDGATE BROADWAY, E.C.4.

tigheit, rather than *Tugend*, is rather puzzling. Apparently he takes the Latin word to signify a combination of manliness, virtue, and efficiency. "Worth" favoured by several competitors, seems the best English word. Jingles such as "Pluck brings Luck," "Fortune favours fitness," are surely beneath the dignity of the Latin original. A large number fell into dog-English over *die Lösung seiner grossen Aufgabe*, rendering it by "the solution of his great task." We "solve a problem," but "accomplish a task." By *egoistische Politik* seems to be meant a nationally selfish policy. The passage is a fine piece of writing. It is skilfully built. The author begins with some of the man's great characteristics, passes downwards through his external roughnesses to a genuine defect of character, rises again to his heroic qualities, and finally reaches a noble climax. We do not know where in English literature a character sketch of such concentrated force and compactness can be found, and we should be grateful to anyone who can give us a reference. Four hundred words is the limit.

We classify the 49 versions received as follows:—

Class I.—(a) A.B., Redivivus, Corydon, E.A.N., Fortes fortuna juvat, Fortune le vent. (b) Il Sarto, Toots, Bugle, H.W.C., Somewhen, Borderer, F.H.L., Dane, Johnny, Nibbard, Primpilus.

Class II.—M.A., Rhodon, Sa, J.A., Ardeonaig, Ixia, Sorbier, Camel, Garnet, Switzerland, Bésigue, Scot, Inexperienced, E.W.F., Chingleput, Young Lochinvar, Kathrich, Scorpio.

Class III.—Messina, Amaryllis, Alex, S.D., Fritillary, Ope et Consilio, Gepia, A.R.V., M.A.S., Firenze.

Class IV.—W.W.M., Jeunesse, Cassandra, G.E.M.

A Prize of Two Guineas is offered for the best translation of the following extract from Ernest Renan's letter describing the seminary of Saint-Sulpice, quoted in his "*Souvenirs d'Enfance et de Jeunesse*":—

Je me trouve fort bien ici. Le ton de la maison est excellent, également éloigné de la rusticité, d'un égoïsme grossier et de l'afféterie. On se connaît peu, et le cœur est un peu à froid; mais les conversations sont dignes et élevées; il s'y mêle peu de banalités et de commérages. On chercherait en vain entre les directeurs et les élèves la cordialité; c'est là une plante qui ne croît guère qu'en

Bretagne; mais les directeurs ont un certain esprit large et bon, qui plaît et convient parfaitement à l'état moral des jeunes gens tels qu'il leur arrivent. Leur gouvernement est à peine sensible: c'est la maison qui marche, ce ne sont pas eux qui la conduisent. Le règlement, les usages, et l'esprit de la maison font tout; les hommes sont passifs, ils sont là seulement pour conserver. C'est une machine bien montée depuis deux cents ans; elle marche toute seule; le mécanicien n'a que veiller sur elle, tout au plus, de temps en temps, à tourner un écrou et à huiler les ressorts. Ce n'est pas comme à Saint-Nicholas, par exemple, où on ne laissait jamais la machine aller seule; le mécanicien était toujours là, volant à droite, à gauche, mettant partout le doigt, essoufflé, empressé, parce qu'on ne songeait pas que la machine la mieux montée est celle qui exige le moins d'action de la part du moteur. Le grand avantage que je trouve ici, ce sont les remarquables facilités qu'on a pour le travail, lequel est devenu pour moi un besoin et, que l'on égard à mon état intérieur, un devoir. Le cours de morale est très bien fait; il n'en est pas de même du cours de dogme: le professeur est nouveau, ce qui, joint à l'importance majeure, et personnelle pour moi, des traités de la Religion et de l'Eglise, m'arrangerait fort mal, si je ne trouvais auprès de ces autres messieurs le moyen d'y suppléer.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by February 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London. E.C. 4.

THE Montessori Society has arranged a course of lectures for this term. Among forthcoming items we notice Mr. S. H. Leonard's lecture on "An Introduction to Child Anthropology," on February 14 at 5.45 p.m., at University College, Gower Street, W.C.; and that on March 14, at the same time and place, by Staff-Sergt. Claremont, on "The Montessori Philosophy of Life." The study circles in connexion with the society have recommenced, and full particulars can be obtained from the Organizing Secretary, Dr. Jessie White, 11 Tavistock Square, W.C.1.

1919.

COMPETITION OF ESSAYISTS, R.S.P.C.A.

Notice to Principals of London Schools.

All Papers relating to this year's Competition for Prizes given by the Royal Society for the Prevention of Cruelty to Animals for the best Essays on the Duty of Kindness to Animals were posted during November, 1918. The only addresses of Private and other Schools available to the Society are derived from London Directories.

If you have not yet received notice of Competition please apply at once for particulars.

No Essay received after February 28th next.

E. C. FAIRHOLME,
Chief Secretary.

 Scholasque, London.

SCHOOL TRANSFER DEPARTMENT.

Telephone
 Gerrard 7021.

Schools transferred and valued. No charge whatever will be made to vendors of Schools or School Partnerships by Messrs. GRIFFITHS, POWELL & SMITH unless a sale is effected or agreed upon. No commission charge whatever made to Purchasers of Schools or School Partnerships.

Applications from intending purchasers are solicited for the following properties:

GIRLS' SCHOOLS.

Sussex (Seaside).—Girls' Boarding and Day School. Established over 50 years and conducted by vendor 13 years. Gross receipts past year, £1,454; average gross receipts past three years, £1,200. Number of boarders about 22, paying from 45 guineas; number of day pupils, about 35, paying from 2 to 5 guineas per term. Rent of large detached house near sea, £150. The vendor would be willing to accept one term's fee on each pupil transferred by way of premium for goodwill. School and some household furniture at valuation. We have personally inspected this school, and believe it to be a very good opening, and to be had on favourable terms.—No. 6,012.

Lancashire (Seaside).—High-class Boarding and Day School for Girls and small Boys. Established 30 years and conducted by vendor 10 years. 17 boarders and 34 day pupils, paying about £500 per term. Net profits, £526. Rent of large house, £130. Price for goodwill by arrangement. School furniture, about £350; household furniture at valuation. The vendor states that she paid £650 for goodwill ten years ago on accounts examined by a well known chartered accountant; then there were only 27 pupils paying about £340 per term. There is also a Hostel for Ladies next door, which is also for sale.—No. 6,010.

Dorset.—Transfer or Partnership. Girls' Boarding

and Day School. Established and conducted by vendor 25 years. Gross receipts past year about £1,608. Net profits past year about £500 to £600. Number of boarders about 30. Prospectus terms 40 to 60 guineas per annum. Number of day pupils about 40. Prospectus terms 9 to 12 guineas a year. Rent of large detached house standing in its own grounds of about 3 acres and containing about 30 rooms, only £110. Large vegetable and fruit gardens. Three delightful shady tennis lawns. There is also a small house used as class room at a rental of £18 per annum. Terms of sale or partnership to be arranged. Owing to the increase of numbers, the vendor wishes to meet with a lady who would help her in the general management of school.—No. 5,085.

Kent (Seaside).—Boarding and Day School for Girls. Established over 50 years. Gross receipts past year £625. 10s. 3d. Number of boarders 6, paying £30 to £45 per annum each; 65 day pupils, paying from £1. 9s. to £3. 15s. per term, without extras. Extras £70 to £80 per term. Rent of detached house, held on 21 years' lease, £78. Price for goodwill £225, or the vendor would accept one term's fees on all pupils transferred. School and household furniture at valuation. The vendor states that, during the last three terms, numbers have increased rapidly, and that the gross receipts for the first two terms of this year were £462. 17s. 6d.—No. 6,003.

BOYS' SCHOOLS.

London, S.W.—High-class Preparatory School for Boys. Established about 50 years, and conducted by vendor with his late partner about 6 years. The vendor wishes to sell on account of his partner having just recently died. We understand there are 7 boarders at about £100 per annum, and 26 day pupils at about 10 guineas per term. Some are day boarders and pay more. Vendor states that in 1912 there were only 13 pupils. Gross receipts for 1917 about £1,800, and for 1918, £1,500; the reason for the slight drop in numbers last year was owing to the raids. Rent of very good premises, £130. Vendor states a great deal of money has been spent to make the accommodation, &c., all that could be desired. Price for goodwill, and excellent school furniture, about £2,000, or close offer.—No. 6,996.

London, S.W.—Boarding and Day School for Boys. Established many years and conducted by vendor 7 years. Gross receipts past year, £1,500. Net profits past year, £625. Number of boarders 13, paying £54 to £63 per annum; and 67 day pupils, paying £3. 3s. to £5. 5s. per term. Rent of large house, containing over 13 rooms and usual offices, £95. Price for goodwill and school furniture, £1,500. The vendor states that he wishes to dispose of his school owing to the ill-health of his wife. Part of purchase money may remain.—No. 6,995.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—

GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 and 13 Henrietta Street, Covent Garden, London, W.C.2.

Posts Wanted—continued.

These School and Teachers' Advertisements are continued from page 117.

Posts Vacant—continued.**LONDON COUNTY COUNCIL.**

APPPLICATIONS are invited from candidates for the under-mentioned positions: COUNTY SECONDARY SCHOOL, BROCKLEY.

(1) A first-class SPECIALIST IN PHYSICS to take Open Scholarship standards of work and to organize the Physics for a school taking a Board of Education advanced course in that subject.

(2) A highly-qualified MATHEMATICAL SPECIALIST to prepare for University Open Scholarships and to organize the Mathematical work in a school which is developing an advanced course on the Science and Mathematical side.

(3) A MASTER for good general Form work, with special need of good French for middle school forms. For either of these positions willingness to help in Cadet Corps or in Games would be a recommendation.

COUNTY SECONDARY SCHOOL, FULHAM.

(4) An ART MISTRESS. Good Secondary School experience with large classes essential.

COUNTY SECONDARY SCHOOL, PLUMSTEAD.

(5) MISTRESS to teach Chemistry and Physics.

The salary attaching to position (1) is £400, rising by yearly increments of £10 to £450. (2) and (3) will be £150 to £240 a year, according to experience, rising to £300 by yearly increments of £15, and thence by £10 to £400.

The commencing salary in the case of (4) will be £120 to £140, and in the case of (5) £120 to £180, according to experience, rising in both cases to £270 by yearly increments of £10.

In addition to these salaries a temporary War bonus of from £39 to £59, according to salary and scale chosen, is payable.

Forms of application may be obtained from EDUCATION OFFICER (H.4), Education Offices, Victoria Embankment, W.C.2 (stamped addressed foolscap envelope necessary). Forms must be returned by 11 a.m. on 21st February, 1919, addressed in the case of (1), (2), and (3) to HEAD MASTER, County Secondary School, Brockley, Hilly Fields, Brockley, S.E.14; in the case of (4) to HEAD MISTRESS, County Secondary School, Fulham, Munster Road, Fulham, S.W.6; and in the case of (5) to HEAD MISTRESS, County Secondary School, Plumstead, Old Mill Road, Plumstead, S.E.18.

Canvassing disqualifies.

JAMES BIRD,
Clerk of the London County Council.

LONDON COUNTY COUNCIL.

THE London County Council invites applications for the position of HEAD MISTRESS of the County Secondary School, Clapham. The school is a Secondary School for Girls between the ages of ten and nineteen. The building is a modern one specially erected for the purpose of a school. The number of girls is about 540. The salary will be £400 a year, rising to £600 by annual increments of £20, subject to the provisions of the Council's scale of salaries, together with a temporary war bonus of £39 a year.

Apply to EDUCATION OFFICER (H.4), Education Offices, Victoria Embankment, W.C.2 (stamped addressed foolscap envelope necessary). Form giving particulars will then be sent. Form must be returned by 11 a.m., on Monday, 24th February, 1919, accompanied by copies of three testimonials of recent date. Canvassing disqualifies.

JAMES BIRD,
Clerk of the London County Council.

ASSISTANT MISTRESSES ASSISTANT MASTERS LADY MATRONS and HOUSEKEEPERS

seeking appointments in Public or Private Schools are invited to communicate with Truman and Knightley, Ltd., whose close and intimate relations with the leading schools place them in a unique position to find candidates suitable for openings in all branches of the teaching profession.

A special feature of this agency is the personal attention it gives in endeavouring to secure appointments suited to the applicant in every way.

The number of vacancies is now too large to permit of a satisfactory selection being inserted, and applicants are therefore invited to state their requirements fully, assured that they will, if desired, be treated in strictest confidence.

There is no registration fee and the commission charged to those for whom an appointment is secured is very moderate.

LADIES AND GENTLEMEN SEEKING PARTNERSHIPS IN OR TO TAKE OVER SCHOOLS OF THEIR OWN SHOULD COMMUNICATE PERSONALLY WITH MR. TRUMAN, WHO UNDERTAKES ALL NEGOTIATIONS CONNECTED WITH THE TRANSFER OF SCHOOLS, AND IS IN A POSITION TO OFFER ASSISTANCE AND SOUND ADVICE TO PURCHASERS, TO WHOM NO CHARGE IS MADE.

INTERVIEWS WILL BE ARRANGED BY APPOINTMENT.

Woodwork Benches.

SCIENCE LABORATORY FITTINGS FOR SCHOOLS.

The Educational Supply Association have 25 years' practical experience in the fitting up of school laboratories and carry out the whole of the work, including the gas and water services, flues, and drainage.

The E.S.A. have supplied laboratory fittings to:—

National Physical Laboratory, Teddington.
Science and Art Department, South Kensington.
Electrical Standardizing Institute, London.
St. Mary's Hospital Medical School.
Merchant Venturers' Technical College, Bristol.
King's College. Dulwich College.
Charterhouse School. Harrow Lower School.

The E.S.A. also supply simple benches for physical work only.

THE "ESAVIAN" PATENT SLIDING AND FOLDING PARTITIONS AND SCREENS.

These partitions are constructed on an entirely new principle which is patented—sliding pilasters being provided between each pair of leaves, the sliding movements being fitted to the pilasters—this arrangement providing the easiest possible movement. Doors on the Esavian principle thirty feet high have been supplied and have proved to be thoroughly reliable and satisfactory.

The partitions can be supplied either made entirely of wood or partially glazed.

EVERYTHING FOR SCHOOLS
The EDUCATIONAL SUPPLY ASSOCIATION LTD
STEVENAGE HOUSE, 40-44 HOLBORN VIADUCT, LONDON, E.C.

Manuscript Writing and Lettering.

By an Educational Expert.

A Handbook for Schools and Colleges, showing the Historical Development and Practical Application to Modern Handwriting of several Manuscript Styles derived from Ancient Roman Letters. Fully illustrated, together with Eight Collotype Plates of Writing from Manuscripts recommended as Models for Study.

Foolscap 4to (8½ by 6½ in.). Price 5s. net. Postage 5d.

A Memorandum on the Aims and Methods of Art Teaching in Day Schools.

By F. MORLEY FLETCHER (Director, Edinburgh College of Art). Price 6d. net.

A National Scheme for Vocational Training for Able-bodied Sailors and Soldiers.

By DOUGLAS COCKERELL, M.B.E.
Price 6d. net.

JOHN HOGG,
13 Paternoster Row, London, E.C.4

THE NATIONAL SOCIETY OF ART MASTERS.

PATRON:

HIS MOST GRACIOUS MAJESTY THE KING.

School Drawing Certificate for Teachers in Elementary Schools.

The Examinations are held in May.
Entries close on March 24th.

Examinations in Drawing for Secondary and Other Schools.

The Examinations are held in June.
Entries close May 10th.

Internal Examinations in Schools of Art and Art Classes.

Dates are arranged to suit individual Schools.

Copies of these schemes and forms of application may be obtained on application to the

Secretary, **ALFRED SHUTTLEWORTH, A.R.C.A.,**

45 Bedford Row, London, W.C.1.

THE JANUARY MEETINGS.

ASSOCIATION OF HEAD MASTERS.

ON January 2 and 3 the Annual General Meeting of the Head Masters' Association was held in the Guildhall under the Presidency of Mr. F. B. Malim (Haileybury). An interesting innovation in procedure was a joint session of the Head Masters' Association and the Head Masters' Conference on the first day, when the reports on modern languages and on natural science were discussed. Mr. Malim's inaugural address was full of encouragement and of hope for the future, as he dwelt upon the effects of the War—its discovering the flaws and the strong points in our educational system. The chief defects were not of quality but of quantity. There was, he pointed out, much room for hope in that the nation had now, as never before, recognized the value of education, and that we had a President of the Board of Education who knew that the whole educational system depended upon the teachers, and that without the best men continuation schools would be schools in name only. Neither wealth nor fame could be offered as an incentive to the schoolmaster, but to men who had learnt in the school of war the meaning of service and *esprit de corps*, men who loved beauty and knowledge, and could infuse that love into others, the profession offered a life full of fruitful work and a reward in the form of contact with the eager hope and gratitude of boyhood. A resolution was then carried expressing the thanks of the Association to Mr. Fisher and their satisfaction at the passing of the Education Act and the Teachers' Superannuation Act.

Mr. W. Jenkyn Thomas (Hackney Downs) urged the more rapid demobilization of teachers and students, the establishment of a system of allowances in the matter of age, &c., in competitive examinations, and in time of residence for degrees in the case of demobilized men. He also urged the abolition of compulsory Greek in Responsions and the Previous Examination. All these proposals were adopted after discussion.

At the joint session of the Conference and Association the reports of the Government Committees were considered and resolutions adopted embodying the following points: the inclusion of suitable science instruction in the curricula of the upper classes of elementary schools, preparatory schools and of secondary schools till about the age of sixteen; science and mathematics to be compulsory in the Public Schools Entrance Examination, the Army and Navy Entrance, the First School Examination—provided that comparative weakness in these should be atoned for by excellence in other subjects. Between the ages of twelve and sixteen the science teaching should have reference to the experiences of everyday life. In the course of the discussion on the Modern Language Report the meeting agreed that a knowledge of English grammar before entering the secondary school was essential; a common grammatical terminology was desirable; one or more foreign languages were an essential of higher education; French should normally be the first foreign language and Latin the second; an arts degree should be obtainable without a knowledge of Greek or Latin.

A Joint Committee was appointed to consider possible modifications of the Board's regulations with regard to State aid. At the second session Mr. Bailey (Liverpool) urged the necessity of more elasticity in the regulations for advanced courses as to choice of subjects, and the time allowed for them, and he also pointed out the necessity of making the second school examination of real value to the pupil as regards a University course and in other external examinations. In these proposals he was supported by the meeting, but his suggestion of a higher capitation grant for pupils doing post-matriculation work in schools which have not advanced courses was not adopted.

Mr. England (Exeter) welcomed the report of the Departmental Committee on Salaries, and his resolution to this effect was carried by the meeting. His suggestions that the minimum salary for the head master of a Secondary School should be £600; that capitation fees and boarding-house pupils as a means of remunerating a head master should be abolished; and that there should be a national provision for the training of well-educated men as physical instructors in secondary schools, were also adopted.

In the afternoon, Mr. Spurley Hey, Director of Education for Manchester, gave an interesting address on "The Relation of Continuation Schools to Secondary Schools." He pointed out that up to the present the training of adolescents had been carried out practically single-handed by the secondary schools, but that the Education Act of 1918 would probably bring about a great change in this respect, and would therefore necessitate a clearer definition of the aims and functions of a secondary school. He thought they would be separate and parallel systems with different ends in view, the object of one being to sow the seeds of a life of real culture and to send some pupils to the University, while the other could only effect a nodding acquaintance with higher education. He believed that the new Act would prolong school life in secondary schools, and necessitate increased provision for secondary education, and he illustrated his remarks by statistics from Manchester. The recent movement towards the reduction of fees in many schools would, he thought, be accelerated by the Act. He suggested possibilities as regards co-operation between the secondary

schools and day continuation schools on the social side, and concluded by urging those connected with secondary schools to insist that every one of these schools should have the right and freedom to develop along its own lines.

ASSOCIATION OF ASSISTANT MISTRESSES.

THE Annual General Meeting of the A.A.M. was attended by a large number of members. The earlier part of the meeting was devoted to routine business, the amount of which testified strikingly to the development of the work of the Association in recent years, and to the representative position that it is called upon to fill in educational matters.

The president, Miss Laurie, recalled the two aims that the Association was founded to pursue, namely, the promotion of the cause of education, and the improvement of the status and furtherance of the professional interests of teachers. She suggested, that while it is clear that the latter aim has been vigorously pursued, yet teachers might perhaps do more to forward the former. The tendency to narrowness induced by undue specialization should be combated by the cultivation of interest in education as a whole. The work of the teacher will benefit by everything that induces a widening of outlook and a drawing closer of the relation between different subjects.

The Association's Salary Scale, as amended a year ago, was carefully reconsidered in relation to the time spent by the intending teacher in preparation, the qualifications obtained, and the continued rise in the cost of living. Keen interest was shown in the practical details of the Superannuation Act, and the necessity that every teacher should without delay become acquainted with the provisions of the Act was brought out. Both discussions were based on the acceptance of the fact that the registration of the teacher is now the normal condition.

The other side of the Association's work was illustrated by the reading of two papers—one by Miss Wills on "Educational Reconstruction and Religious Teaching," and the other by Miss Margaret Bondfield on "The Place of the School in Society." The former speaker urged that a definite place in the secondary school curriculum should be assigned to Bible teaching, and that the teacher giving this instruction should be trained for the work in such a way as to secure accurate knowledge of the subject and a broad outlook. Miss Bondfield's address was an eloquent plea for seeking after truth in teaching. She declared that education, which should form a preparation for life, does little or nothing at present to prepare children to meet the facts of industrial life. She enumerated the chief points in the education programme of the Labour Party, and referred also to the programme put forward by the Socialist Education Minister in the new Prussia, many of the points being in harmony with the British Labour Party's programme. Miss Bondfield also urged that teachers should strive to ascertain the truth for themselves, e.g. in questions of history or economics, and to present it to their pupils uncoloured by personal opinion. She besought teachers to stand out boldly as champions of truth, open examples of honesty of judgment and sincerity of purpose.

The discussion on the draft of the Association's Education Policy served as a connecting link between the two sets of activities, and showed the anxiety of members to formulate a comprehensive and well-balanced scheme. The draft was referred to the Branches for full consideration, with a view to the matter being brought up again at the Summer Meeting.

ASSOCIATION OF ASSISTANT MASTERS.

THE Annual Meeting of the Incorporated Association of Assistant Masters was this year of special interest. An Organizing Secretary is to be appointed, whose whole time will be at the disposal of the Association. This is urgently necessary, for the strain on the officers, and on those mainly responsible for the work of the sub-committees, has become increasingly severe. A resolution to raise the annual subscription to a guinea is an earnest of a determination to press forward and extend activities. Many people believe that, with the adoption of new salary scales and the passing of the Superannuation Act, the position of teachers has been so much improved that little cause for dissatisfaction remains. The discussion on the report of the Departmental Committee showed how far this is from being the case. Criticism inevitably centred on its omission to recommend a national minimum scale of salaries. Strong dissent was also expressed from the suggestion in the report, that to place existing teachers at points in the salary scale corresponding to their length of approved service would involve a greater disturbance of existing financial arrangements than most authorities would be prepared to face. It cannot be emphasized too strongly that existing teachers are still profoundly

dissatisfied with present conditions; for many, if not most of them, are worse off than they were before the war, in spite of war bonuses and the Fisher grant. With a few notable exceptions, local authorities and governing bodies have done little to improve these conditions—sometimes, of course, through sheer lack of means. The Board of Education are to be asked to consider the establishment in such cases of a special grant in aid, to be distributed on account of approved expenditure.

While the primary object of the Association is to secure an adequate minimum salary for every teacher—a scale rising to £600 is advocated—it was made clear that, once this minimum is attained, there is no objection to the payment of additional increments on account of special merit or special responsibility.

The following resolutions on the Superannuation Act were passed:—

(1) That all service in (i) schools which submit to inspection by the Board of Education, and are declared by the Board to be "efficient," (ii) schools which are accepted by the Teachers Registration Council for purposes of registration, should be considered equivalent to "recognized service" as defined in Clause 18 of the Superannuation Act, 1918.

(2) That, in the case of existing teachers who are registered by the Teachers' Registration Council on or before April 1, 1919, all past teaching service should be considered equivalent to "recognized service," as defined in Clause 18 of the Superannuation Act, 1918.

The adoption of these proposals would do much to mitigate the hard case of teachers with experience in private schools, many of which were recognized by the Board as efficient when Column B of the old register was being compiled.

Lack of space forbids all but the barest mention of other resolutions. There was a protest against secret reports by Inspectors, Head Masters, and Heads of Departments. Another resolution foreshadowed closer co-operation between Masters and Mistresses in Secondary Schools. The claim for representation on Education Committees is coupled with a proposal that Consultative Committees should be set up, on which teachers nominated by their respective Associations should have half the representation. The simplification of examinations already effected was welcomed, and it was urged that the University Degree Course should begin where the School Advanced Course leaves off.

It may appear that questions concerning better conditions of service were more prominent than usual. This must continue to be so until conditions are altered. But the desire of the Association is that these questions may be settled as speedily as possible, so that it may be free to give attention to the work that more properly belongs to it.

PRIVATE SCHOOLS ASSOCIATION.

OWING to the influence of the Education Bill, the Teachers' Superannuation Bill, and other causes, the meetings of the Private Schools Association were characterized by remarkable unanimity, enthusiasm, and determination. Under the chairmanship of Mr. S. Maxwell, a mass of business was got through smoothly and expeditiously. Sir Philip Magnus, M.P., was elected President for the year in place of Dr. Sibly. Rev. C. Whitfield was appointed General Secretary, and Mr. Whitbread, Treasurer.

In order still further to extend the influence of the Association the country was divided into eight areas, in each of which a special secretary will organize propaganda work and form fresh branches and guide the activities of individual members in bringing under the notice of local members of Parliament the grave injustice done to efficient private-school teachers and the danger threatening the cause of true education by the increase of bureaucratic control.

The greatest indignation was expressed at the total exclusion of all private-school teachers from the benefits of the Superannuation Act. A carefully thought out scheme of insurance—by which approximately equal advantage could be provided by the payment of premiums—was brought forward by Mr. Hume (Birmingham); but a rousing and eloquent appeal from Mr. Bayley (Wellington) resulted in the appointment of a special committee to deal with the question and demand that the injustice of the Act should be removed. It was felt that the ingrained sense of fair-play in the British nation could be relied upon, and that it was necessary to bring home to the voters the Prussianizing tendency of recent legislation.

It was felt that one of the greatest obstacles was the existence of a certain number of inefficient private schools in the country—as these were being publicly cited as proof that all private schools ought to be extinguished. For this reason it was decided that no principal should be eligible for election as a member of the Association unless he (or she) fulfilled one or more of the following conditions:—(1) Registration under the Teachers Registration Act, (2) the possession of a University Degree (or its equivalent) plus three years' experience, or training, (3) five years' experience—inclusive of two years as Head—in a school approved by the Executive Council.

At the general meeting a cheque was presented on behalf of the

members by Miss Cowdroy to Mr. Wilson Rumsey as a token of their appreciation of his devoted services as Treasurer for thirty-three years.

TEACHERS' GUILD.

THE Annual Meeting was held on January 2. After the adoption of the annual report and statement of accounts, the Vice-Chairman, Miss H. Busk, read the presidential address at the request of Canon Masterman, who was in France with the Australian Imperial Forces. Canon Masterman expressed the opinion that the work which the Guild exists to do will be more needed in the future than it has been in the past, there being no other society that has for its object the encouragement of fellowship among teachers of every kind, instancing the establishment of the Club as one of the means to this end. What is most needed is that the whole body of members should recognize that the success of the Guild must depend upon their individual energy and enthusiasm. The educational developments of the new Education Act will achieve little unless organizations like the Guild maintain high ideals of education.

Following this meeting, Lord Gorell, Deputy Director of Staff Duties (Education), gave an address on the educational work in the Army. The work has far more than a transient value; its aim is not to afford occupation and mental discipline merely during the quiescent period, but to awaken latent interests, and through them to stir the mental and emotional faculties into quickened growth. The vastness of the work is unknown to the public. When Lord Gorell first took the matter in hand, a leading educationist told him that he might "found the greatest university the world has ever seen." Although in a sense that could never be, Lord Gorell felt that the movement had gone a long way towards that aspiration, by helping the men to a better self-realization. Its justification came from the fact that its growth was spontaneous, from below, with no pressure from above, and that it is carried on with a definite view to resettlement, and, by combining the ideal and utility motive, to give the men something that is going to help them in the future, this being part of the debt which the nation owes to their services. Three million men are participating in the scheme, and there is great need for teachers. To meet this, two schools have been established, one at Cambridge and the other at Oxford, where officers have an intensive course in the art of teaching. These schools may be said to be training colleges for continuation school work.

"National and International Ideals in the Teaching of History" was the subject of an address by Prof. Hearnshaw, who, raising the question of ideals as applied to education, compared the aims of different peoples at varying epochs. The supreme aim of a democratic education should be to train men and women to play a worthy part in the civic life of the community. The history of his own country should form the foundation of the instruction in history for every citizen, not as in Germany for political ends (with such direful results), but to broaden the outlook. English history is not a matter of the history of the English nation alone, and a healthy nationalism is not incompatible with that growing internationalism which is to end wars and to culminate in the Parliament of Man and the Federation of the World.

Miss Levett, defining the meaning of "National and International Ideals in the Teaching of History" as (1) a clear conception of national characteristics, conditions, and aspirations, and (2) a sounder knowledge than most of us gained at school of the working out of our international sympathies and antipathies, and the practical relation between states, proceeded to discuss the means whereby these aims can be attained, involving important changes in teaching methods.

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.

At the meeting of the Association of University Women Teachers at the Conference of Educational Associations, on January 8, an interesting lecture was given by Miss May Smith on "Some Mental Effects of Loss of Sleep." After pointing out the importance of the problem of fatigue to various sections of the community—i.e. the military, the industrial, and the educational—she explained the difficulties of finding a satisfactory test for measuring fatigue. She described a series of experiments she had made on herself, extending over a period of two years. In order to reduce the problem to the simplest form, she had reduced her hours of sleep for three consecutive nights, thus obtaining a state of fatigue apart from anxiety or other mental strain. The test applied was that of the dotting machine devised by Dr. McDougall to test the power of voluntary attention. A moving tape printed with red rings is passed before the eyes of the subject, who endeavours to dot each ring with pen and ink as it passes. The number of errors had been recorded in the form of graphs, and showed that the immediate effect of fatigue was a great improvement in the dotting followed by deterioration for a disproportionate time. The deterioration was rapid and the return to the normal slow and irregular in point of time, i.e. on the sixteenth day or later. Comparison of the results of fatigue cycles seemed to suggest the possibility of ac-

quiring a relative immunity to fatigue, possibly by the production of an anti-toxin. The lecturer suggested that the great workers of the world might be persons who possessed an organism with special powers of producing such an anti-toxin. She pointed out that subjective feelings bore no relation to the objective demonstration of fatigue and that the return to the normal was much slower than the subject imagined. This fact was of some importance both in industry and education, one of the subjective effects being increased irritability and emotional instability.

FROEBEL SOCIETY AND JUNIOR SCHOOLS ASSOCIATION.

At the Annual Meeting of the Froebel Society, on January 9, Prof. Shelley was elected President, and contributed a stimulating address on "The New Educational Realism." He began by tracing the history of realism from the mere giving of unconnected facts, through causal "connexions" and "correlation" of subject to subject, up to the present-day realization of the child as an evolving individual of an evolving society, recognizing for himself the purpose of his work, and its connexion with his life, and so making it real. He dwelt on the view of mind as an object in itself having relations to other objects, and emphasized the need for the relation of things to the individual mind. We must not merely impart knowledge, we must educate for joy. As an instance of the better way, Prof. Shelley took Browning's "O to be in England," saying that by the old "correlation," this poem would be given to English children in April. But it might just as well be taken in the depth of winter. The teacher's business in April was to see that the child gained that glorious experience out of which the poem came. For Browning was not watching an English April when he wrote—he was recalling a past joy—and without the joyous experience there could be neither poem nor appreciation thereof.

In the afternoon a meeting was held to consider points which had been put before branch members already. The discussion dealt with the kind of apparatus, &c., which ought to be provided for the individual work of children; with the teacher's difficulties in dealing with children of various types; with the right relation of individual work to class work; and the relation of individual discoveries to organized knowledge.

THE JOINT CONFERENCES OF EDUCATIONAL ASSOCIATIONS.

MR. FISHER delivered the inaugural address on New Year's Day to two large audiences, and reference to his wise remarks is made in our Occasional Notes.

The first joint meeting of the conference took place at University College, Gower Street, W.C., on January 4.

Prof. John Adams contributed a paper on "The Utility Motive in Education." He said that Plato and Aristotle had worked out the problem fully if not completely. All we had to do was to apply their conclusions to present circumstances. The demands of the W.E.A. for a cultural education rather than vocational were utilitarian in the sense in which the Athenians were. But the old Greeks, while regarding useful work with disdain, did not select their studies because of their uselessness. An arrangement could be made by which the claims of the cultural and utilitarian ideals might be met. The relative values of the two kinds of knowledge is something for others to quarrel about. For the educator it is enough that he provides a course that maintains a certain balance between them. We shall certainly not succeed in maintaining a due proportion of cultural elements if we set out on a crusade for the useless. Art, literature, and music are as useful as chemistry, arithmetic, and shorthand. It will help our consideration of the subject if we drop the term *utilitarian*, whose acquired sinister connotation does much to confuse the issue.

Dr. Hayward said that the true idealist will not study in order to improve his mind, nor practise art in order to improve his taste, nor do good in order to improve his character: he regards these as irrelevances which obscure the view of the only goal worthy of our aim and mar the purity of our motives. So the doctrine rejects not only the utilitarian view, but also the cultural view. Utility of course follows; culture of course follows; but the motive should take no cognizance of this. It should be pure gold, unalloyed by baser metals, and these high ideals have with every normal person a strong impelling power. Such is the gospel of disinterestedness. And a very winsome and very noble gospel it is. There is something in our nature that stretches out its hands to welcome it. Dr. Hayward concluded by expressing his sympathy with the view of the Workers' Educational Association.

The Second Joint Conference, on January 11, dealt with the Continuation School. Major Gray, M.P., discussed the problem which would be created on the expiration of the seven-year limit in the Education Act, in relation to Continuation Schools, and the question of whole and part-time instruction. As this question becomes realized the tendency will be to favour the shorter period of full-time instruction. A difficulty to be surmounted will result from the character

of the instruction received already, which will vary according to whether the pupil goes from the elementary or secondary school. The curriculum should provide for a good general education, the aim being to develop intelligence; vocational training as such should be rigidly excluded.

Miss M. Frodsham described an experimental pioneer Continuation School at Canning Town, where they had buildings which provided a hostel and club. She, like Major Gray, felt that the school atmosphere must be eliminated from the new continuation schools. The immediate problem would be with those young people who had been employed with good wages during the War and now had to obtain other work. Parents, employers, and pupils alike would have to be won over to see the good in the scheme; they were suspicious of the compulsion, but not at all disinclined to view with favour anything which would give them a chance to get on, and they looked upon education as a commodity which the rich have and they have not.

ASSOCIATION OF PUBLIC SCHOOL SCIENCE MASTERS.

THE General Meeting of this association was held at the London Day Training College on December 31 and January 1. The association was founded in 1900, with the membership restricted to the public schools. It has grown steadily until the present time, when nearly all such schools are represented in it. At the meeting the constitution was changed so as to include science masters in all secondary schools which are under corporate control; and, accordingly, the title was altered to "The Science Masters' Association." It was also decided to undertake the publication of a periodical entitled *The School Science Review*, of which Mr. C. H. J. Adlam (City of London School) will be the editor. Mr. W. W. Vaughan, the Master of Wellington College, was elected President for 1919, and Mr. W. D. Eggar (Eton College) and Capt. W. J. R. Calvert (Harrow School) were appointed Secretaries.

Col. Sir Ronald Ross presided throughout the meeting. In his opening address, he expressed the hope that in the education in the future it would not be forgotten that the experiences of war time had shown how beneficial to health the military open-air training had been; and he suggested that there should be at least a fortnight's compulsory physical training, under discipline, in the open air, for both sexes, every year for five years, between the ages of about fifteen and twenty. Passing on to the academic aspects of education, Sir Ronald Ross said that in much of our teaching we made the fundamental error of giving too much attention to detail at the outset: the mistake was most marked in classics and mathematics; but, to quote his own words, "In our teaching of most things we potter about the porch, and never look into the temple at all."

The discussions during the meeting were concerned chiefly with the evils of early specialization at school, and there were frequent references to the adverse influence of examinations in this respect. Mr. F. S. Young, Head Master of Bishop's Stortford College, read a paper on "The Importance of Restricting Specialization in University Scholarship Examinations, and of giving weight to General Education." He urged that candidates should be required to show conclusive evidence of having reached a satisfactory standard of general education before they were allowed to compete for a scholarship at a University, and that they should be encouraged to offer subsidiary subjects at the examination.

Mr. W. D. Eggar contributed a paper on "The Teaching of General Science," in the course of which he said that classical masters now assisted, with considerable success, in the teaching of science in the lower forms at Eton. During the debate which followed, much dissatisfaction was expressed with the new regulations for the Oxford and Cambridge School Certificate Examination. Contrary to the recommendations of Sir J. J. Thomson's Committee, the Board which is responsible for this examination has framed the regulations so as to discourage the liberal teaching of science which the Association has advocated for some years. The meeting passed a resolution, *nem. con.*, that the syllabus for science in this examination should be broadened by the inclusion of an alternative paper in general science.

THE GEOGRAPHICAL ASSOCIATION.

THE Geographical Association, at its Annual Meetings in London on January 3 and 4, received the Annual Report, showing an increase of its membership from 1,000 to 1,458, and detailing schemes put into operation for increasing the Association's usefulness. A Standing Committee has worked for the modification of secondary-school regulations with already a small measure of success. On this subject a resolution was passed emphasizing the value of geography both among the humanities and among the

sciences both as regards the First School Examination and in Advanced Courses. The Board of Education have sanctioned, as an experiment, an Advanced Course, pivoting upon co-ordinated work in geography and history, and also including work in French on one hand and physical science on the other. A strong feeling was expressed that geography, with essentially the same syllabus, should be recognized in Group 1 and in Group 3 of the groups for the First School Examination.

The Report further stated that the Board of Education had organized a Summer School for discussion of problems of geographical teaching. This school was largely attended, and the results of its discussions are published in book form by Messrs. Philip & Son under the title, "Geography in Education." The Report also referred to the increasing recognition of geography in Universities. At Liverpool it has an Honours School in the Faculty of Arts; in the University of Wales it now has an Honours School in both Faculties; at London, Cambridge, and Oxford the same ideas are receiving sympathetic consideration; and it was stated that the next Report would probably be able to chronicle interesting developments here and at Edinburgh.

Prof. Grenville Cole, F.R.S., gave his Presidential Address on "The Northern Seas and the Arctic Route to Muscovy." Mr. W. H. Barker lectured on "The Historical Geography of West Africa," Mr. A. R. Hinks gave an illustrated paper on "War Maps," and Mr. C. B. Fawcett and Miss D. D. Adam led a discussion on "The Teaching of the Geography of the British Isles." Several of these papers will appear in the Association's journal, *The Geographical Teacher*, in which it was decided also to print syllabuses of connected courses suitable for elementary schools, and bibliographies to assist advanced work in the top forms of secondary schools and in institutions of higher education. Intending members are invited to correspond with the Clerk to the Association at the new office address, 1 Marine Terrace, Aberystwyth.

THE HISTORICAL ASSOCIATION.

THE Historical Association held its thirteenth Annual General Meeting at University College, London, on January 10 and 11. The President, Prof. C. H. Firth, LL.D., Litt.D., was in the chair. The Business Meeting was held on the first afternoon, when the elections of Vice-Presidents and Members of Council took place, and the reports of the Secretary and Treasurer were read. The Secretary reported that the membership had increased during the past year by more than 200 to 1,311, a higher total than ever reached before. It was further reported that since the last annual meeting a Branch of the Association had been formed in Monmouthshire and South Wales under the presidency of Prof. Bruce, of Cardiff University College.

Dr. R. M. Burrows, Principal of King's College, London, gave an address to a large audience, on "The Revival of Greece." On the second morning a paper was read by Prof. C. H. Firth on "How to Mitigate the Evil of Examinations." It had been originally intended that this paper should follow one by Mr. J. W. Headlam-Morley on "How to Set an Examination Paper in History," but the Council had been obliged to postpone the latter paper until some later date, owing to the absence of Mr. Headlam-Morley in Paris in connexion with the Peace Conference. Prof. Firth's paper was followed by an interesting discussion, in which Profs. Hearnshaw, Pollard, Tout, and other members took part.

Later Dr. A. P. Newton, Lecturer in American and Colonial History at University and King's Colleges, London, proposed the following motion:—"That in history teaching in schools the main stress should be laid upon the general history of the English-speaking peoples and their relations to one another, and the history of other peoples should be considered in relation thereto."

Dr. Grice (School of Economics) seconded the motion, and Mr. F. Marvin, Prof. Carl Russell Fish (of Wisconsin University), and Prof. Pollard took part in the debate which followed. It was decided that the motion should not be put to the vote.

MATHEMATICAL ASSOCIATION.

THE annual meeting of the Mathematical Association was held in the London Day Training College, Southampton Row, W.C.2, on January 1 and 2. There was a good attendance at all the meetings, and the discussions were particularly animated and interesting. The President, Prof. T. P. Nunn, departed from the usual practice of giving a discursive lecture on general mathematical topics, and opened a discussion on "Astronomy as a School Subject." The Astronomer Royal was present and took part in the discussion. Prof. Nunn exhibited a series of very simple models which could easily be constructed by the boys themselves, and

from which they could very easily obtain fairly accurate records of the simpler motions of the celestial bodies. Teachers from Stonyhurst and Bootham School gave their own experiences in teaching astronomy to their pupils. The lecture was listened to throughout with great attention and enthusiasm.

Dr. W. P. Milne read a paper which had as its object the discussion of the wider opportunities which the Mathematical Association would soon have of adapting mathematical knowledge and processes to the pivotal industries of the nation, such as commerce, agriculture, engineering, navigation, &c., as opposed to the purely academic side of mathematical teaching, the two aspects being not antagonistic, but complementary. He also suggested that, in addition to the London meeting of the Association, a summer meeting should be held in the provinces to study the application of mathematics to the various industries on the spot. Upon a show of hands being taken, this suggestion was found to be cordially approved of. He also announced officially that the Mathematical Association had already established machinery for studying the mathematical syllabuses relative to the various industries, and that formal reports would be issued in due course. Great interest and approval of this new departure of the Association was exhibited by the audience.

Mr. Basil A. Howard opened a discussion on the teaching of geometry to first-year pupils. It was abundantly evident from the remarks of those present that deep and widespread dissatisfaction is now being felt with the current mode of teaching geometry. The crux of the question seems to be that an attempt is being made to teach academic geometry with a perfunctory appeal to ruler and compasses as a means of giving the pupil confidence. Probably a course of practical geometry such as is given to engineers, to be followed by a more academic study of the subject, would be the best solution of the difficulty. Many teachers suggested that the properties of the circle should be taken before those of areas in the formal course, as the former are really more easy than the latter. It was evident from the attitude of the meeting that a new revision of the whole subject of the teaching of geometry will probably have to be made in the near future by the Association.

At the "Advanced Section" Dr. Brodetsky read a brilliant paper on "The Graphical Treatment of Differential Equations," a method devised by him in connexion with his aeroplane researches to deal with insoluble differential equations as they present themselves in practical work. Mr. A. Lodge dealt with "Cubic Graphs of the Form $y = ax^3 + bx^2 + cx + d$." Miss G. M. Weighell was unfortunately absent through illness, and hence was unable to read her paper on "The Value of the History of Mathematics in the Teaching of Mathematics."

MODERN LANGUAGE ASSOCIATION.

THE Annual Meeting of the Modern Language Association was held at University College on January 8 and 9. Perhaps the most interesting feature was a debate on the new Advanced Courses, during which much useful evidence was given by teachers taking part in such courses at different boys' and girls' schools. It was generally agreed that the labour and preparation involved demanded additional "free periods," and also that, though the principle of correlation insisted upon by the Board was sound, it must not be carried so far as to subordinate literature to history. The best literature must be read, and this does not always take the form of historical novels or extracts from the writings of historians. Above all, if the Advanced Courses are not to prove a failure in the majority of our secondary schools, they must be linked up closely with the University course. There is no inducement for a pupil who has matriculated to stay at school for another two years following a course which leads nowhere and preparing for an examination which will be of no use to him, and the majority will leave in order to attend a University. The proper place for a pupil up to the age of eighteen is, however, the school, and the best solution was thought to be to raise the matriculation age and the standard of the matriculation examination. As an alternative and temporary expedient, the meeting passed a resolution urging that the second "approved examination" should be accepted as equivalent to a University Intermediate Examination leading on to a three-years' Honours course.

Mr. E. Bullough read an interesting paper on "Educational Co-operation between the Allies," and a paper by Dr. Emilio Re, on "The Teaching of English in Italy," evoked a resolution urging the encouragement of the teaching of Italian in this country.

Resolutions approving the Report of the Government Committee on Modern Languages, and urging the immediate adoption of some of its more important recommendations by the Authorities concerned, were also passed, the Report of the Reconstruction Committee of the Association was approved, and the new rules and

constitution adopted. It is hoped that the Association will soon possess offices of its own and that its activities will be greatly increased, a state of things which should have a very favourable effect upon the membership.

The Earl of Lytton, who was prevented by his ministerial duties from delivering the Presidential Address, has promised to do so at a later date.

NATIONAL SOCIETY OF ART MASTERS.

THE annual meeting of this Association was held on January 2. The President, Mr. J. Harrison, Principal of the Nottingham School of Art, delivered his address, during the course of which he asked: In how many of our primary and secondary schools is art, in any form, treated seriously? Consider the small amount of time given to art, a subject which is universal and vital, by students in training colleges for teachers who are to teach drawing, colour, &c., in the primary and other schools. It is here where the great weakness is. Another evil is the inspection of art in a number of art classes by the science inspectorate. He was not finding fault, he said, with these inspectors, but with the system which permits those who have had small or no art training to inspect subjects in art of which they can have but little knowledge. Is it possible to have anything more detrimental to art education than inspection by those who do not know and whose opinions and verdict carry no weight? We must press home the request, that this anomaly shall be removed, and that all inspection of art shall be by inspectors, trained in art, and having a good knowledge of the teaching and requirements of art students of various types.

Sir Frank Warner, ex-President of the Silk Association, gave an address on industrial art. The designer, he said, must have a thorough and up-to-date knowledge of the capabilities of machinery, its limitations in some directions, its almost unlimited possibilities in others. Machinery is always undergoing development, and what is impossible yesterday becomes possible to-day. The education of the trade designer must therefore be technical as well as artistic, and the education of others engaged in the production of patterned goods must be artistic as well as technical. Art education is at present confined to a ridiculously narrow field, and business people, employers in particular, needed to be enlightened as to the desirability that not only their designers but many others in their employ should receive it. The creator or designer of artistic goods should receive his training in the vicinity of the production of the particular articles which he intends to create. He must be able to think in the methods and materials of his craft, and the school that trains him must be in a position to provide him with access to those methods and materials. Industrial art students must be provided with highly developed schools, schools of collegiate rank, in the centre of each important industry. Let students learn in every art school to draw and to study the harmony of colour; let us develop in them the sense of beauty, the cultivation of taste, and the appreciation of works of art.

ASSOCIATION OF SCIENCE TEACHERS.

THE annual meeting was held on January 6, at University College, Gower Street, W.C.1. Miss Lees (Clapham High School) was elected President for 1919, the retiring President, Miss Saunders (Newnham College, Cambridge), becoming Vice-President. The morning session was devoted to the business of the Association with a short address from Miss Lees "On the Teaching of Science in the Upper Forms of Girls' Schools and its Relation to Examinations and to the First Year of University Work."

At the afternoon meeting, Prof. F. W. Oliver (University College, London) opened a discussion on the relation between school and University in regard to science teaching. He said that the reason for urgency in considering this question was that improved facilities for science teaching in secondary schools would soon be following on the new regulations of the Board of Education. The status of the intermediate examination was threatening to become a matter of controversy between school and college. The schools resented the pupils having to repeat at the University work already done at school, and many University teachers regarded the claim of the school to teach to the intermediate stage as an encroachment on the function of the University. He wished to see greater co-operation between school and University. The discussion was continued by Prof. Weiss (Manchester), Mr. T. G. Bedford (Cambridge), and others. Prof. Weiss suggested that, instead of specializing in one or two branches of science, secondary schools should aim at a more level standard in the general science teaching. He considered that it would not be advisable to accept the science teaching at school as the equivalent of the first year at the University, but hoped that, if the general level of science teaching at schools were raised, the

Cambridge University Press

The Cambridge Modern French Series.

General Editor: A. WILSON-GREEN, M.A.

The aim of this series is to provide Modern French texts equipped with exercises on the lines of the direct method. The volumes are divided into three groups and comprise:—

1. A short biography in French of the author.
2. A series of exercises, each containing passages for translation into French, and questions in French on (a) the narrative, (b) the words and idioms, (c) the grammar.
3. A French-English vocabulary for those who desire translation into English, instead of reading all in French.

New Volumes in the Middle Group:—

Honoré de Balzac. Le Colonel Chabert. Edited by SYDNEY H. MOORE, M.A. 8s net

J. J. Jusserand. La Vie Nomade et les Routes d'Angleterre au XIV^e Siècle. Edited by A. WILSON-GREEN, M.A. 4s net

Previously Published:—

SENIOR GROUP.

Six Contes, par Guy de Maupassant. Edited, with exercises and vocabulary, by H. N. P. SLOMAN, M.A. 2s 6d net

Ce que disent les Livres. Par Emile Faguet. Edited by H. N. ADAIR, M.A. With 8 portraits. 8s net

FETTER LANE, LONDON, E.C.4: C. F. CLAY, MANAGER

Universities would be able to assume some general knowledge of science in all their students upon entrance, and thus be able to remodel their first year's course and arrive at a higher standard in their final examinations. He also supported the suggestion of Prof. Oliver that the Universities might institute special courses for teachers to keep them in touch with the latest developments in science. He expressed a hope that the conditions of the science teachers in schools might be so ameliorated that many of them might engage in original investigations, which he felt sure would vivify their teaching and enable them to instil a really scientific attitude of mind into their pupils. It was resolved that the Association, in consultation with kindred bodies, should take the necessary steps for the appointment of a Consultative Council representing schools and Universities, to discuss the scope and method of the higher work of schools and its relation to the work of Universities.

SIMPLIFIED SPELLING SOCIETY.

PRESIDING at the Annual Meeting of the Simplified Spelling Society on January 2, Prof. W. Ripman said that spelling reform was important, because our present spelling involved a great waste of the time of school children and was an obstacle to the spread of English as a world language. The Society had launched a petition asking for a Royal Commission on the subject. Such a Commission would inquire, in the first place, whether a simplification of English spelling would be advantageous. Then would come the much more difficult question as to the form the simplification should take. In the first place, what form of speech should be represented? We required a standard of speech before we could have a really uniform and satisfactory spelling. The next question would be as to what symbols should be used to represent the standard speech. The scheme of the Simplified Spelling Society used only existing letters, but the question would arise whether any new letters should be added. He thought the details of the reform had by now been discussed sufficiently, and that it was no longer a time for pushing individual schemes. As to its own scheme, the Society was quite willing to sink this completely, if the Commission that it asked for chose another, even though the scheme so laid down fell short of the Society's ideal. Subsequently Miss L. Walsh spoke, and there was an interesting demonstration by children from her school; Miss Parker and Miss Renwick showing how the little pupils were

taught to read with the simplified spelling, and how easily the transition to the ordinary spelling was made. Miss Thompson, Lyons Council School, Durham, and Miss McConnochie, Clepington Road School, Dundee, followed, and Mr. A. P. Graves told several amusing stories illustrating some results of our present spelling. Mr. Mohammed Sadiq spoke of the importance of English spelling reform to the natives of India, and a general discussion followed.

BOOKS FOR SECONDARY SCHOOLS AND THE OXFORD AND CAMBRIDGE LOCALS.

Inorganic Chemistry, both Practical and Theoretical, with Chemical Calculations and Graduated Questions. The best, latest, and cheapest textbook on the subject produced for the requirements of the University Locals. By S. W. BURNELL, LL.B., B.Sc., and A. J. DICKS, B.A., B.Sc. Crown 8vo, cloth, 379 pp. Price 4s. 6d. net.

Elementary Science. By J. H. NANCARROW, late Head Master of Kingston Public School of Science, and Lecturer at the Richmond School of Science. Crown 8vo, cloth, 354 pp. Price 4s. net.
Provides a thorough grounding in the elements of Physics, Mechanics, Heat, Light, Magnetism, Electricity, Chemistry, &c.

Plant Study in School, Field, and Garden. A textbook on Rural Science and Gardening. By J. S. BRIDGES, B.Sc., F.C.S., and A. I. DICKS, B.A., B.Sc., F.L.S. Head Master of Walthamstow County Secondary School. Crown 8vo, cloth, 432 pp. Price 4s. 6d. net.

This Botany textbook is of an experimental nature and free from difficult terms and Latinisms. Practical exercises and a summary appear at the end of each chapter. The book is profusely illustrated with over 600 original drawings.

Concurrent Practical and Theoretical Geometry. By W. J. POTTER, M.A. (Cantab.). Published in Three Parts. Part I, 2s. net; Part II, 2s. 6d. net; Part III, 3s. net. Detailed Prospectus post free on application.
Answers to the numerical and graphical examples in Parts I to III. Price 1s. net.

A Digest of British History. By S. H. McGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo, cloth, 320 pp. Price 3s. 6d. net.

A History note book on original lines, the great movements, trends and developments being logically traced, and their influences being clearly shown.
Also published in Three Parts as under:—
Part I.—B.C. to 1485. Part II.—1485 to 1789. Part III.—1789 to 1912. Price 1s. 4d. net each.

For full particulars of Heaton's Geographies and Students' Shakesperian Texts, &c., see our Catalogue, post free on application to

HERBERT RUSSELL, 35 & 36 TEMPLE CHAMBERS, LONDON, E.C. 4.

The Principles of Model and Common Object Drawing and The Shadow Treatment of Outline Drawing. Being Book I

of "A Complete Course of Blackboard Drawing." By E. A. BRANCH, Art Master Central Secondary School, West Ham. Royal 4to, cloth, 98 pp. (New edition now ready). Price 4s. net.

"This book explains those rules of perspective which apply alike to the special geometrical models familiar to the art student, and to the common objects which he sees outside the class-room, the rules which govern the representation of the cylinder in the art school, the kettle in the kitchen and the band-stand in the park."

Freehand for Teachers & Art Students.

By E. A. BRANCH, Art Master, Central Secondary School, West Ham. Royal 4to, 79 pp. New edition now ready. Price 3s. 6d. net.

Contains Thirty-two Photographic Representations, including Inlays, Patterns in Pottery, Textiles, Repousse, Wrought Iron, Carved Work, and Natural Foliage, together with One Hundred Diagrams of Construction.

Milton's "Areopagitica." Edited by C. W. CROOK, B.A., B.Sc. With critical Introduction, full Text and Notes, Historical Appendix, Examination Questions, and Index to Notes. Crown 8vo, cloth, 152 pp. New edition now ready. Price 2s. net.

Bacon's "New Atlantis." With an Introduction and Notes by D. W. BEVAN. Crown 8vo, 68 pp. Interleaved. Price 1s. net.

The Acts of the Apostles. Edited by Rev. E. C. W. HANMAN, B.A. With Introduction, Notes, Glossary, Questions, Index, and a series of carefully graduated Examination Questions. Specially adapted for the Oxford and Cambridge Local Examinations. Crown 8vo, cloth, 168 pp. Price 2s. net.

EDUCATION ACT, 1918

NEVER

HAS THE SUBJECT OF SCIENTIFIC
PHYSICAL TRAINING ON EDUCATIONAL
LINES BEEN SO VITALLY IMPORTANT
TO THE NATION AS AT PRESENT.

Those who are interested in the welfare of the
rising generation should write for the following:—

S Y N O P S I S of Ling's System of Physical Training.

OLD GYMNASIA

Particulars for Reconstructing Economically, to bring
in line with modern requirements for receiving
Regulation set of Educational Gymnastic Appliances.

P H O T O S

Several Recent Secondary School and Welfare Outfits.

SCHOOL CLINICAL

Plinths, Correction Belts, Head Suspension

are recommended to join the

INTERNATIONAL PHONETIC ASSOCIATION.

Subscription 2s. 10d. per annum.

Members receive free of charge *Le Maître Phonétique*, the official organ of the Association (Editor: P. Passy, 20 Madeleine, Bourg-la-Reine, Seine, France; Assistant Editor: D. Jones, University College, London, W.C.1).

The Principles of the I.P.A., post free, 7d.

List of other publications and prices of back numbers of *Le Maître Phonétique* (from 1889) on application.

PLIMSOLLS.

Owing to the shortage of these shoes we have brought out a substitute, a plain black canvas one-strap shoe with "jute soles," a shoe that will wear well for drill or play. Having no rubber in them, they will not "draw" the feet. Sizes run from 12's child's to 7's ladies, all one price, 3s. a pair. A sample shoe will be sent to Mistresses for approval, and orders booked in rotation for the coming Term.

A Selection of Suitable Class Books.

MATHEMATICS AND SCIENCE.

- Algebra, Junior.** By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. **3s. 6d.** With Answers, **4s.**
"Maintains a high standard of excellence we are accustomed to expect from so well known a source."—*Journal of the Assistant Masters' Association.*
- Algebra, School (Matriculation Edition).** By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **5s. 6d.**
"As a school text-book, this volume has much to recommend it, the examples and test-papers being carefully chosen."—*Mathematical Gazette.*
- Arithmetic, The Junior.** By R. H. CHOPE, B.A. With or without Answers. *Third Edition.* **3s. 6d.**
"No better Arithmetic for school work has come into our hands."—*Educational News.*
- Arithmetic, The School.** By W. P. WORKMAN, M.A., B.Sc. With or without Answers. *Second Edition.* **4s. 6d.**
"The best arithmetic for schools on the market."—*Mathematical Gazette.*
- Botany, Junior.** By FRANCES CAVERS, D.Sc. **3s. 6d.**
"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster.*
- Botany, Senior.** By FRANCIS CAVERS, D.Sc. **5s. 6d.**
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature.*
- Chemistry, Junior.** By R. H. ADIE, M.A., B.Sc. *Second Edition.* **3s. 6d.**
"The book offers a thoroughly sound course of practical instruction."—*Nature.*
- Chemistry, Senior.** By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. *Second Edition.* **5s. 6d.**
"The ground is well covered on experimental lines."—*Guardian.*
- Chemistry, Senior Practical.** By H. W. BAUSOR, M.A. **3s. 6d.** Including preparations, experiments on action of heat, quantitative and qualitative analysis.

- Geometry, Junior.** By A. G. CRACKNELL, M.A., B.Sc. **3s. 6d.**
"A simple treatment of the elements of geometry."—*Schoolmaster.*
- Geometry, The School.** By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. **4s. 6d.**
Also in Two Parts—Part I (Euclid I, III 1-34, IV 1-9). **2s. 9d.** Part II (Euclid II, III 35-37, IV 10-16, and VI). **2s. 9d.**
"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World.*
- Heat, Junior.** By JOHN SATTERLY, D.Sc., M.A. **2s. 9d.**
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*
- Heat, Senior.** By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **4s.**
"The information is accurate and up to date."—*The Journal of Education.*
- Magnetism and Electricity, Junior.** By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**
"Makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times.*
- Magnetism and Electricity, The School.** By R. H. JUDE, D.Sc., M.A. **4s. 6d.**
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature.*
- Mechanics, Junior.** By F. ROSENBERG, M.A., B.Sc. **3s. 6d.**
"The book possesses all the good qualities of its fellows."—*Schoolmaster.*
- Science, Junior Experimental.** By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. **3s. 6d.**
"We can recommend the work heartily."—*Secondary Education.*
- Sound and Light, Senior.** By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **5s.**
"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary physics."—*Nature.*

LANGUAGES, HISTORY, AND GEOGRAPHY.

- English Composition, Junior.** By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. **2s.**
"This excellent manual makes plain for the young pupil the essentials of good writing. Can be heartily recommended."—*Education.*
- English Composition, Senior Course of.** By E. W. EDMUNDS, M.A., B.Sc. *Second Edition.* **3s. 6d.**
"A very useful book for practical classroom purposes."—*Schoolmaster.*
- English Course, The Matriculation.** (Composition, Précis-writing, Paraphrase, and Analysis of Sentences.) By W. H. LOW, M.A., and JOHN BRIGGS, M.A. *Third Edition.* **4s. 6d.**
"Admirably fulfils its purpose. The chapters on précis-writing and indexing are excellent."—*Westminster Review.*
- English Grammar, Junior.** With Parsing and Analysis. By A. M. WALMSLEY, M.A. *Second Edition.* **2s.**
"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*
- French Course, New Junior.** By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. **3s. 6d.**
"The book becomes a serious rival to those existing."—*Schoolmaster.*
- French Course, Senior.** By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. **4s. 6d.**
"A model of clearness and simplicity."—*The Journal of Education.*
- French Essays, Matriculation.** (Free Composition.) By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. **2s.**
"A serviceable and well-graded book."—*School World.*
- French Reader, New Junior.** By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. **2s. 9d.**
"Consists of well-chosen literary extracts in French."—*Education.*
- French Reader, Senior.** With Introduction, Notes, and Vocabulary. By R. F. JAMES, B.A. **3s. 6d.**
"This is a splendid reader."—*Schoolmaster.*
- Geography, Junior.** By G. C. FRY, M.Sc. **3s. 6d.**
"A concise book of geography on modern lines. The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education.*
- Geography, Text-book of.** By G. C. FRY, M.Sc. *Second Edition, Revised and Enlarged.* **5s. 6d.**
"The compilation is by no means one of mere geographical facts: the 'why' and the 'wherefore' are everywhere in evidence."—*Schoolmaster.*
- History of England, School.** By M. E. CARTER, Honour School of Modern History, Oxford. **4s. 6d.**
"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian.*
- English History, Groundwork of.** By M. E. CARTER, Honour School of Modern History, Oxford. **2s. 9d.**
"A very readable outline of the salient facts of English History. The material is well arranged and the language is simple."—*Educational News.*
- Social History of England, A.** By FREDERICK BRADSHAW, D.Sc., M.A. **5s.**
An elementary account of the social and economic development of England.

Tel. No.: Museum 615.

**THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
KINGSFIELD,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
The Marchioness of SALISBURY.
Major the Hon. WALDORF ASTOR, M.P.
The Rt. Hon. CHRISTOPHER ADDISON, M.P.
The Rt. Hon. Lord SHAW OF DUNFERMLINE.

Principal:

Miss H. C. GREENE.

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared as teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in **October**. Further particulars may be obtained on application to the SECRETARY.

**BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASIAC TEACHERS.**

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, KINGSFIELD, DARTFORD HEATH, KENT.

THE OXFORD AND CAMBRIDGE EDITION.

Gospel of St. Mark. By the Rev. F. MARSHALL, M.A. Maps of Palestine, Sea of Galilee, Galilee, Jerusalem, Environs of Jerusalem, Temple; Special Introduction.

Acts of the Apostles. Part I, Chapters i-xvi. By the Rev. F. MARSHALL, M.A. Specially prepared for Students taking the first part of the Book. Complete for the purpose, with Geographical and Biographical Notes, Maps, and Introduction.

As You Like It. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. 256 pp., Cr. 8vo.

Henry V. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Maps and Genealogical Tables. 256 pp., Cr. 8vo.

Richard II. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Illustrations and Genealogical Tables. 232 pp., Cr. 8vo.

— READERS. —

Gods and Heroes; or, Greek Fairy Tales. By P. C. SANDS, M.A., late Fellow of St. John's College, Cambridge. This is a reader intended for use in the Lower Forms of Schools. It gives a splendid initiation into the stories of ancient Greek mythology. Cr. 8vo, 128 pp., Cloth, 1s. 3d.

La Guerre, A.D. 1914. With notes on idiomatic phrases, by TAYLOR DYSON, M.A. A selection of leading articles on the Great War taken from the French and Belgian newspapers and arranged as a book for French Unprepared Translation for Middle and Upper Forms. Cr. 8vo, 128 pp., 1s. 3d.

La Guerre, Vol. II. A sequel to La Guerre, A.D. 1914. By TAYLOR DYSON, M.A. 1s. 3d.

ATLAS AND NOTES ON EUROPEAN HISTORY.

From the time of **DIOCLETIAN** to the outbreak of the **GREAT WAR, 1914.**

By **HARTLEY FUDGE, M.A.** 1s. 6d.

"The book consists of 36 Coloured Maps, not too full of names, and 104 pages of Notes, so called, which, however, practically form a précis of the history of Europe, from Diocletian to the Congress of Vienna. The author then carries forward history to the outbreak of the present War, by dealing separately, but still chronologically, and ab initio, with the history of Poland, France and Alsace-Lorraine, Prussia and German unity, the Dual Monarchy, Ottoman Empire, the Near East, and the like. The whole forms a small reference book useful for History teaching."

Journal of the A.M.A., Dec., 1918.

"In the body of the book there are more than thirty maps which, for the clearness of their lettering, we have very seldom seen excelled. Taken as a series they enable us to trace without confusion, through the centuries, the various stages in the political development of Europe."

OCCASIONAL NOTES.

THE opponents of the Day Continuation Schools have not given up hope of defeating that measure. Just as the small boy, when he loses the toss, tries to jockey his opposite with a shout of "best of three," so they are claiming that continued education is not yet the law, and hinting that perhaps it never may be.

Are we to have
Compulsory
Continued
Education?

They found their case on the clause which entrusts the Board of Education with the fixing of the appointed day. Parliament, so the argument runs, have imposed no absolute obligation; it is all left to Mr. Fisher. He can have the schools if he wants, and if he doesn't he can leave things alone. A school-boy would scout such an amateur reading of the Act, but many people will be relieved to think there is something in it, and herein danger lurks. The difficulties of bringing in the system are admittedly great, and as the days go by without a sign, the impression that the Board are daunted will gather strength. On that account, Mr. Fisher should lose no time in announcing his intentions. And there are other reasons. Until they know approximately when and where the start is to be made, the Local Authorities' preparations can only be on paper. Meanwhile the temporary buildings, which will be urgently wanted later, are being sold for other purposes; so is the equipment which is no longer needed in the War Departments, and much that would be very useful in the new schools is probably getting into the hands of the middleman. Most serious of all, no definite offer of training for, and employment in, continuation schools is being made to the hundreds of officers and men who are now leaving the Army for other occupations, yet who, if they had the

chance and the certainty of employment, would make most efficient teachers of adolescent boys. There is a tide now: Mr. Fisher should take it, and not wait for low water before he appoints the time of launching.

IT will be good news to geographers that at last Cambridge is prepared to recognize the full educational value of geography. Both Oxford and Cambridge, of course, have done much to encourage the subject since Sir John Scott Keltie's famous Report of thirty-five years ago. It has been left, however, to the exigencies of a great war to stir up this further appreciation, which has led Cambridge to decide that a Geographical Tripos shall be established, and that the examination in Part I of the Tripos be held in 1920 and for Part II in 1921. It will be interesting to observe the effect on school geography of this forward step. At present in most public schools the teaching of geography either stops well short of the sixth forms, or, if taught at all in the higher departments, it is entrusted to pure science men, who are naturally apt to regard it as a side issue. They are hardly *en rapport* with the "human" side of the subject. How could it be otherwise? One of the chief aims of such forms is the attainment of a scholarship at the University, and there is no existing scholarship for geography. It remains, therefore, for Cambridge somehow to secure the foundation of a few geographical scholarships at various colleges. This done, and we predict that within a few years a geographical sixth form will range itself in line with its senior brethren in all well-ordered schools. What is wanted is the encouragement not so much of the nebulous subject which at present passes under the name of "geography," but the development of definite, practical work in the laboratory, of research in the field and the open air, and of organized instruction in the whole gamut of conditions which culminate in what is known as economic geography. It is this development which we hope will be the ultimate effect of Cambridge University's exhilarating lead.

UNTIL quite recent years psychological tests were confined to the psychological laboratory, with occasional incursions into the classroom; and they were always conducted in the interests of scientific theory rather than the interests of the subjects experimented on. But a further stage has now been reached—the stage of practical application. No longer is the subject the victim of an experiment: he has become the beneficiary of discovered laws. Not the least of his benefits is his rescue from the fate of being a square peg in a round hole. Binet devised his scale of mental tests in order to get the Parisian child into the right school. The Americans, on entering the War, at once appointed psychological committees to examine recruits with a view to getting the right man for each job and the right job for each man. They have discovered that that way efficiency lies. Indeed, we in England tardily made the same discovery in choosing men for the air service. And now from across the water comes a report that the authorities of Columbia University have decided to supplement the ordinary matriculation examination by a psychological examination: the candidate will in future have to show that he possesses not merely the prescribed amount of book-learning, but also the type of intellect

Psychological
Examination of
Matriculants.

likely to benefit by a University training. This raises afresh the question whether an examination is a trustworthy detector of "brains." The obvious reply is that it depends on the nature of the examination. If the examination gauges the contents of the examinee's mind, but fails to gauge its capacity, it becomes necessary to add psychological tests—tests which aim at discovering what a mind can do as distinct from what it can hold.

THE War has provided us with an additional incentive to the study of modern languages, and in particular those of our allies. Among these, Italian claims our attention for several reasons. Most of us have some acquaintance with French or Latin, or both, and this knowledge renders the study of Italian comparatively easy. Our commercial relations with Italy are likely to become more intimate. Above all, there is much that is beautiful and interesting in Italian literature. Further, it may be surmised that many of those who, before the War, went to Germany for the study of music or art will now turn to Italy. It may be a little difficult to find a place for Italian in our schools for pupils below sixteen, but we may hope that some will take it as a main subject in an advanced course in modern studies. It may well take the place of German in some boarding schools for girls; and it is to be hoped that University students will take it up. The study of English has spread remarkably in Italy during recent years; professorships in English are being established at all the Universities, and more attention than ever before is being devoted to it in the schools. Particular care is being taken that it is taught by men and women possessing the necessary qualifications. It is earnestly to be desired that we may show equal care in the appointment of teachers, and that the study of Italian may occupy the place of honour which it deserves.

URGENT need exists for more University Scholarships for women. The Board of Education may plan advanced courses to prepare girls for University Honours work, and the schools may do their utmost to develop their pupils' powers, but if there is no money available the girls' education will stop short just when the wider University horizon is opening out before them. The movement for the University education for women is of recent date. Existing scholarships and endowments are reserved almost entirely for boys; and, even if open to both sexes, as in recent foundations, there is a tendency always to give the preference to boys. The case of Sir Ernest Cassel's munificent gift recently announced in the press, where a portion of the half-million sterling is to be devoted to scholarships for women, is an exception. Meanwhile, what is to be done to meet the increasing demand for highly trained women to take posts of responsibility? There is a cry for more women doctors, yet a recent investigation made by the Association of Head Mistresses showed some half-dozen women's medical scholarships only attached to schools throughout the country. Mr. Norman Rae has met the present need at Bradford, and Manchester is raising a fund of £10,000 for girls' scholarships. The lead could appropriately be followed in many ways. In some places there is as yet no public memorial to their "notable women"; in others, how better could the memory of the fallen be honoured than by helping their children? Private individuals can pay tribute to some mother,

wife, or daughter; suffrage societies can commemorate the gaining of the vote; and so on. The aim might be to provide one scholarship at least for every secondary school, and it looks as if it is only by special efforts in every locality that this object can be attained.

THERE has been much speculation as to how the Government would fill up the vacancies in the higher ranks of the Civil Service, so long overdue, when temporary assistance had been dismissed and when the senior members had gone into retirement. Ministers were pledged to reserve these appointments for ex-officers of the Army, Navy, and Air Force, and it is likely that nearly four hundred appointments in the Home, Indian, and Colonial Services will be filled by selection during the next two years. About a hundred ex-officers between the ages of twenty-one and twenty-eight will be selected for the Indian Civil Service in August next, and probably as many for the Home and Colonial Services. Forms of application may be obtained from the Civil Service Commission, and candidates must have served for at least a year in the Forces. If the example of the recent Foreign Office admissions is followed, there will be a qualifying examination first, which will consist of an essay, an elementary arithmetic paper, and two papers on general knowledge. When the hopeless cases have been thus weeded out, the remainder will appear before a selection board for an interview, and on this their success will depend. The Board will have before them both the scholastic and military records of the candidates, and will be influenced by these, as well as by the appearance and general *savoir-faire* of the candidates before them. For many years before the War the Authorities had been urged to combine an interview with the examination; for in so severe a competition as was that for the Higher Civil Service, the best men did not necessarily gain the top places, and an interview would have been a corrective to the inevitable chances of an examination. It will be interesting to see if the success of this temporary scheme will induce the Authorities to continue the plan.

THERE is much that is stimulating in the address delivered by Mr. W. A. Brockington at the annual meeting of the Association of Directors of Education, recently reprinted. He is not to be included among those he terms "doubtful souls," who regard some of the provisions of the Act of last year as Utopian. On the contrary, he regards the measure as "the realization of a dream." Perhaps it would be more correct to say that the dreams of certain educational enthusiasts have been translated into statutory language, and that we have a good many cold and commonplace difficulties to overcome before they begin to be realized. Mr. Brockington is not unmindful of these difficulties, more particularly in connexion with "those portions of the Act which still remain in a large measure uncharted areas in English education—an untravelled land." Referring to the compulsory schooling of young persons, he remarks that those of us who have experienced the appalling difficulties of continued education in rural areas grow thin and weary with brooding on the question. His suggestion—put forward as a regrettable alternative—that in some districts the problem might be solved by extending the age of compulsory attendance to fifteen merits serious consideration.

University Scholarships for Women.

Address to Directors.

WHEN there are no exceptions to the by-laws and all children are required to remain in elementary schools (unless otherwise educated) until the end of the term in which they attain the age of fourteen, definite action will be necessary to provide suitable training for the older scholars. In some parts of the country 50 per cent. of the children now leave school at or about their thirteenth birthday, and it is well known that in many schools the pupils in the upper standards not infrequently mark time. Consequently, a development hitherto desirable will now become essential. Something might be done by organizing the schools, where practicable, in two divisions: a lower division, with a time-table and scheme of work for pupils from five or six to twelve years of age; an upper division, providing suitable courses of instruction for two or three years. Some such modification as this would assign a definite purpose to the concluding years of a child's school life, which is too often not available. In some districts, no doubt, it would be expedient to establish central schools, exclusively devoted to upper-division children, and in certain rural areas schools could be grouped for a similar purpose.

IT is to be regretted that the amendment to Section 18 of the Education Act of 1902, with reference to the allocation of capital expenditure to particular areas, has not been determined conclusively by Section 36 of the Act of 1918. The assessable value of a parish or parishes has no connexion with the question of educational needs, and as often as not it is in the poorer districts that new or improved accommodation is required. There will, of course, be a disinclination on the part of County Councils to take advantage of the option provided by the amendment, because certain areas have already contributed special rates towards the capital expenditure incurred for school accommodation; moreover, the unprogressive elements on Local Authorities regard the existing arrangement as a useful means of retarding, if not of preventing, what they regard as unnecessary expenditure for school purposes. If a needed improvement is to impose a special rate of 6d. or 8d. on a particular parish, it may be taken for granted, as a rule, that the parishioners will endeavour to devise some means of avoiding it. Consequently developments desirable on educational grounds may be defeated by parochial considerations. One of the Local Authorities has decided to maintain the present system as regards existing loans, and, except in special cases, to make capital expenditure a county charge. To meet such expenditure it proposes to prepare a building programme for a period of years, and instead of borrowing to raise the sum likely to be required annually out of the rates.

THE President of the Board of Education has appointed an Advisory Committee to assist the Board of Education in the development of their scheme for the establishment of Juvenile Unemployment Centres. The following are the members of the Advisory Committee:—The Rt. Hon. J. Herbert Lewis, M.P. (Chairman); Lt.-Col. Lord Henry Cavendish Bentinck, M.P.; Mr. F. Bramley; Mr. R. A. Bray; Mr. E. K. Chambers, C.B.; Sir Cyril Cobb, K.B.E.; Mr. R. C. Davison; Mr. H. Fleming; Mr. W. B. Harde; Miss A. M. Hitchcock; Dr. R. W. Holland; The Rev. Canon T. Houghton; Miss T. M. Morton; Dr. A. H. Norris; Miss Julia Varley; with Mr. G. W. Buckle of the Board of Education as Secretary.

PERSONAL PARAGRAPHS.

THE Council of Cheltenham College have selected Mr. Henry H. Hardy, M.B.E., to succeed Canon Waterfield, the present Principal, who is retiring in July next. Mr. Hardy was educated at Rugby, where he was head of the school in 1900-1, and at New College, Oxford, of which he was a scholar. He graduated with a first in Classical Moderations in 1903, and a second in Lit. Hum. in 1905. In the latter year he returned to his old school as an assistant master. On the outbreak of war he joined the Rifle Brigade, and subsequently served on the staff, both at home and in France. At present he holds the post of General Staff Officer for Education in the Southern Command.

* * *

SIR ROBERT BLAIR, Chief Education Officer under the London County Council, has been made an Officier de l'Ordre de la Couronne by the King of the Belgians, in "recognition of the generous help he gave to Belgium during the course of the war." Mr. B. M. Allen, of the same service, has also been created Chevalier de l'Ordre de Léopold.

* * *

DR. HAROLD D. HAZELTINE, Fellow of Emmanuel College, University Reader in English Law, has been elected to the Downing Professorship of the Laws of England *vice* Dr. Courtney Kenny, who has resigned the position. Dr. Hazeltine, who is a native of America, passed through the Law School at Harvard, and studied law in Paris and Berlin before coming to England. He is the author of many articles in the legal journals, and several important treatises, and is regarded as one of the leading authorities on the law of the air.

* * *

MR. R. S. DE HAVILLAND has resigned the coaching of the Eton Eight after some twenty-five years of unsparing effort and conspicuous success. All who have passed through his hands, and all who take an interest in Eton rowing, will long remember with gratitude the value of his services. Mr. E. W. Powell, another successful Eton oarsman, will be the new coach.

* * *

THE pending retirement of the Rev. Dr. Arthur W. Upcott, the Head Master of Christ's Hospital, West Horsham, Sussex, is announced in the press. Dr. Upcott was formerly a pupil at Sherborne School, and became a Scholar and Goldsmiths' Exhibitioner of Exeter College, Oxford. He graduated First Class Classical Moderations in 1876, and Second Class Lit. Hum. in 1879. He began his teaching career as an assistant at St. Mark's School, Windsor, and held a corresponding position later at Westminster School. He returned to St. Mark's as Head Master in 1886, and five years later became Head Master at St. Edmund's School, Canterbury. He was appointed to Christ's Hospital in 1902. Dr. Upcott is the author of several classical texts, and has taken a keen interest in educational administration generally. He is chairman of the Higher and Elementary Education Committees of the West Sussex Education authority.

* * *

AT the last meeting of the Essex Education Committee the resignation was announced of Mr. J. H. Nicholas, Secretary of the Committee since 1903, and previously Secretary of the Essex County Council Technical Instruction Committee. The Assistant Secretary, Mr. P. E. Meadon, whose services in the administration of education in the country have been greatly appreciated for some years, has been appointed Director of Education and Secretary to the Committee.

* * *

LIEUTENANT RICHARD WILLIAMS, who has been appointed Head Master of Cowbridge, was an assistant master at Llandovery College when war broke out. Educated at Haverfordwest Grammar School, University College, Aberystwyth, and Jesus College, Oxford, he graduated at the former Uni-

versity with First Class Honours in Latin and Second Class in Greek, and at Oxford with First Class in Classical Moderations and First Class in Lit. Hum. He obtained teaching experience at King Henry VIII's School, Coventry, and Monkton Combe School, Bath, before proceeding to Llandovery.

THE Council of the Girls' Public Day School Trust have appointed Miss Margaret C. Aitken, M.A. (Edinburgh), to be Head Mistress of Sheffield Girls' High School, in succession to Miss Lunn, who is retiring. Miss Aitken is at present second mistress of the Leeds Girls' High School, and Head of the English Department.

MR. PERCY G. FEEK has been appointed Director of Education for Derbyshire, *vice* Mr. A. L. Jenkyn Brown, to whom Mr. Feek has acted as assistant for some years.

THE President of the Board of Education has appointed Mr. A. H. Kidd, Junior Examiner of the Board, to be his Private Secretary.

MR. J. A. BROADHEAD, Head of the Physics Department of Bablake School, Coventry, has been appointed Head Master of Leiston County Secondary School, Suffolk. Mr. Broadhead is a B.A. (R.U.I.), with Second Class Honours in Chemistry and Physics, and a B.Sc. of Victoria and Leeds. He has been an assistant master at St. Michael's School, Liverpool, and Ashville College, Harrogate, and has lately organized the Advanced Physics Course at Bablake School.

THE REV. PREBENDARY HOBSON has decided to resign the Principalship of St. Katharine's Training College, Tottenham. He was the first Principal of the College, and has held the position for forty-one years. The Dean and Chapter of St. Paul's Cathedral have offered him the rectory of St. Augustine and St. Faith.

MR. MAURICE L. JACKS has been elected a Fellow of Wadham College, Oxford. Mr. Jacks was educated at Bradfield College, and went up to Balliol in 1912. He was placed in the First Class by the Classical Moderators in 1914, and in the same year he was elected to a Goldsmiths' Exhibition. He obtained a commission in the K.R.R.C. in the early days of the War, and was severely wounded in France in November 1916. Upon recovery he was appointed Assistant Instructor to the No. 4 O.C.B., and was promoted captain in January 1918. He is a son of the Rev. P. Jacks, Principal of Manchester College, and editor of the *Hibbert Journal*, and a grandson of the Rev. Stopford Brooke.

MISS EDITH WILLIAMS, President of the International Guild, died in Paris on February 16. She was for many years Professor of English at the Ecole Normale Supérieure, Fontenay-aux-Roses. Her work at the Guild was valuable in bringing together students of different nationalities. Her services to education were recognized in 1913, when, for the first time, the Legion of Honour was conferred on an Englishwoman.

THE death occurred on February 9 of Prof. G. Carey Foster, F.R.S., the former Principal of University College, London. Born in 1835, Prof. Foster was educated privately, and received his academic training at University College, London, where he graduated B.A. in 1855. Later he studied at the Universities of Ghent, Paris, and Heidelberg, and in 1862 was appointed Professor of Natural Philosophy at Anderson's College, Glasgow. Three years later he returned to his old college in Gower Street, at first as Professor of Physics, and from 1900 to 1904 as Principal. It was owing to his efforts that University College opened the first physical laboratory in this country in which practical instruction was offered to students. Ten years later he was one of the founders of the Physical Society of London, of which body he was President from 1877 to 1879. He had also held the post of

President of the Society of Telegraphic Engineers—now the Institution of Electrical Engineers—and from 1898 to 1904 he was General Treasurer of the British Association. Many improvements in physical methods and apparatus are recorded as the outcome of Prof. Foster's keen interest in his work.

CAPTAIN J. ALLEN NICHOLAS, R.F.A., whose death is reported from pneumonia at Cherbourg, was formerly classical master at Crediton Grammar School. He was educated at Christ's Hospital, and graduated with honours at University College, Aberystwyth, in 1911. He was returning home on leave after three years' service in the East.

THE death is announced of the Rev. C. H. Perez, one of the last Clerical Inspectors of Schools. He was educated at Christ's Hospital and Cambridge, where he graduated as fourth wrangler. For some years he was an assistant master at Sherborne, and then returned to Cambridge as Fellow and Dean of Pembroke. In 1864 he became H.M. Inspector of Schools, a position which he occupied for 36 years, first in Cumberland, and afterwards as Chief Inspector at Derby. On retiring, he accepted the vicarage of Mentmore, from which he resigned in 1910. He closely identified himself with the Church Missionary Society, and he was keenly interested in the education of the deaf, being for several years Chairman of the Association for Teaching Lip Reading.

TOPICS AND EVENTS.

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.—The annual business meeting of the Association of University Women Teachers was held on January 25. Miss Stephen was in the chair. The honorary treasurer, Miss K. H. Coward, called attention to the satisfactory position of the Association, which had increased in income and in number of members. Miss Alice Woods and Miss M. H. Wood spoke on the importance of training; the former also dealt with the effect of the School Teachers (Superannuation) Act on the staffing of private schools. A motion on the need for a scheme for the joint administration of education by teachers and their employers was passed without opposition. Mr. Homer Lane gave an address on "The Faults and Misdemeanours of Children." He laid stress on the importance of directing instead of repressing the natural activities of the child from the earliest days. Parents and guardians should avoid interfering with the child in his quest for truth, even if his investigations involved some pain, as in the case of a child who wanted to touch fire or candle. The lesson of experience would be a safeguard in the future, whereas an artificial barrier intensified his curiosity, and created a feeling of antagonism to authority. The child's curiosity and desire for freedom were innate, and if unduly repressed an anti-social attitude of mind would be the result. Turning to school life, Mr. Lane urged the importance of giving opportunities for social service, and utilizing the children's energies in constructive work. The address was followed by an interesting discussion.

THE SECONDARY SCHOOLS ASSOCIATION.—A deputation representing the Association was received by Mr. Fisher, President of the Board of Education, on January 28. The object of the deputation was to place before the President certain considerations concerning the alteration or withdrawal of Regulations Nos. 23 and 24 of the Regulations for Secondary Schools. The deputation, which was attended largely, was introduced by Sir Philip Magnus, Bart., M.P., and among those who addressed the President were: The Very Rev. H. Wace, Dean of Canterbury; the Rev. Prebendary J. S. Northcote; the Rev. Canon Driscoll, Cardinal Vaughan School; Miss E. M. Guinness; the Very Rev. Wm. Moore Ede, Dean of Worcester; Mr. F. M. Kingdon, Bishop's Stortford College; Mr. J. Chadwick, representing eleven schools of Notre Dame; Mr. E. Hartley Parker, London Orphan School, Watford; Mr. E. Eyre, Chairman of the Catholic Conference of England; and the Ven. Archdeacon H. K. Southwell, Provost of the Woodard Schools. Mr. Fisher received the deputation sympathetically, and promised to give his careful consideration to their representations.

ASSOCIATION OF HEAD MISTRESSES.—The Executive Committee of the Association have passed the following resolution:—

THROUGH THE SUN IN AN AIRSHIP.

By Professor JOHN MASTIN, M.A., Sc.D., Ph.D.

"Mr. Mastin manages to make his tale absorbing at all points, the interest never slackens, his imagination never fails. The suggestions opened out are numerous and appalling. Some of the discussions are on very deep subjects, and, though they do not lead us far, and are hardly as illuminating as the utterances of poets, they are put down soberly and in a convincing manner, which shows that the author takes his work seriously. His scientific knowledge aids him well in his task, and has enabled him to produce a fine novel as attractive to boys as to grown up people."—*Daily Telegraph*.

"That the unity of the teaching profession requires that all duly qualified teachers whose years of service have been spent in any schools recognized by the Board of Education as efficient should be eligible for State pensions on the same conditions as are laid down in the School Teachers (Superannuation) Act for teachers in grant-aided schools. Thus alone can be secured that free circulation of teachers among different types of schools which is essential to educational progress." The next annual meeting of the Association is to be held on June 13 and 14, 1919, at King Edward's High School, Birmingham.

MANAGERS OF ELEMENTARY SCHOOLS.—The Annual General Meeting of Representative Managers of London County Council Elementary Schools was held on February 24, when the Annual Report for 1918 was presented. Among other resolutions adopted during the year the following may be recorded: On February 4, 1918, that with the view to promoting the welfare of the schools, greater sympathy with and more recognition of the school managers should be manifested by the Council; that the duties of managers should be expanded and defined; that head teachers should have the opportunity of working more closely with the managers; and that the functions of managers should be more clearly indicated to them. On May 22, that in the opinion of this Conference, there should be a body of managers for each school or group of schools; that the selection should be as far as possible of a local representative character. That legislation should be sought with a view to making obligatory the conferring of substantial powers and duties on the managers of elementary, nursery, and continuation schools, including responsibility for physical welfare and care work. That the body of managers should as far as possible include members of the Local Education Authority, and representatives of the various popular interests in the district, so that the school may be in touch with all classes of the community which it serves; and at the same time the managers become well-informed popularizers of education, and the creators of a sound public opinion in support of educational progress.

EDUCATION IN THE ROYAL AIR FORCE.—The establishment of the scheme for education during the period of demobilization in the Royal Air Force has shown that there is a general desire among officers and men to obtain assistance in various branches of study. Much is being done to meet this widespread demand by the institution of regular classes, but a large number of cases remain which cannot be dealt with satisfactorily in this manner. The special circumstances of the Force in regard both to the higher percentage it contains of skilled workmen, and to the fact that so many officers and men are serving in detached units and in out-of-the-way places make the problem of meeting individual needs one of difficulty. Arrangements are being made to cope with this aspect of the problem by developing correspondence tuition by voluntary helpers, and it is thought that there must be men and women at home who would gladly assist in this work by devoting a part of their leisure to helping an officer or man anxious to take up serious study. The subjects in which instruction is desired range from law and medicine, European and Asiatic languages, business methods, and technical instruction—especially for the various branches of engineering—to general educational subjects, and to such outdoor interests as bee-keeping and poultry farming. It is felt that if members of the public interested themselves personally in this work, and were placed in direct contact individually with the officer or man they could best assist, a great stimulus would be given to the experiment. Offers of voluntary assistance from individuals qualified and willing to help in this work will be welcome, and further particulars of the scheme may be obtained by an application in writing to the Secretary, Air Ministry, Strand, W.C.2. Envelopes should be marked, "Educational Branch, Directorate of Training."

A MUNIFICENT GIFT FOR EDUCATION.—It is announced in the press that Sir Ernest Cassel has placed in the hands of trustees a sum of half a million sterling for educational purposes. The trustees are: Mr. Asquith, Mr. Balfour, Miss Philippa Fawcett, Mr. H. A. L. Fisher, Lord Haldane, Sir George Murray, Mr. Sidney Webb. Five special purposes are particularized by Sir Ernest Cassel in making this gift, namely:—The promotion of adult education in connexion with the Workers' Educational Association, or any other association or body approved by the trustees; the establishment of scholarships for the encouragement of the education of workmen or their sons and daughters; the promotion of the higher education of women by the assistance of colleges for women; the promotion of the study of foreign languages; towards the establishment of commerce in such terms as may be approved by the trustees.

PRIMARY SCHOOL NOTES.

The New Nursery Schools.

THE twofold object of the new nursery schools—(1) the close personal care and medical supervision of the individual child, involving provision for its comfort, rest, and suitable nourishment; (2) definite training, bodily, mental, and social, involving the cultivation of good habits in the widest sense, under the guidance and oversight of a skilled and intelligent teacher—naturally involves the employment of nurses as well as teachers. The staff of the nursery school of normal type, containing from forty to fifty children, would include a superintendent possessing teaching qualifications, an experienced nurse assistant, and a probationer. As special courses of training are being organized in the training colleges for superintendents, there would appear to be an excellent opening for teachers and war-time nurses to qualify themselves for positions in the new schools. The hours of duty will be somewhat longer than those of ordinary school service, but the salaries of all certificated and uncertificated teachers employed in nursery schools must not be less than the minimum salaries prescribed by the Board for teachers of similar grades employed in the primary schools. It would appear, therefore, that the new schools promise very suitable openings for women of good education and lofty ideals.

The Reform of the Inspectorate.

IT is becoming very clearly realized that the operation of the new Education Act will involve great changes in the personnel, functions, and outlook of the Inspectorate of the Board of Education. There is a growing body of opinion that of late years the rank and file of the Inspectorate has degenerated towards the type of mind which regards criticism, constructive or destructive, as the principal qualification of office. The drawing up of school reports, frequently so lengthy that neither managers nor teachers seriously regard them, still appears to be the main concern of such inspectors. Breadth of outlook, generosity of mind, companionableness with teachers, keenness to inspire and to recognize initiative, sympathy with and encouragement of new methods, readiness to admit a different point of view, and the will to render practical help in solving school difficulties and in carrying out school experiments, are essential qualifications for the inspectorial as well as the teaching office; and if inspectors leave with the teachers they visit feelings of utter depression and profound discouragement it must be admitted that such inspectors have failed to carry out their first and most important function of inspiration. Discouragement and depression are the frequent and immediate effects of many inspectors' visits to schools; children as well as teachers suffer from the visitation. Yet the spirit of the Suggestions of the Board of Education is nobly conceived and faithfully translated by leading members of the Inspectorate; it is the lack of outlook among many in the lower grades which constitutes the gravest obstacle to the progress of educational reform. And, if it is a profitable investment for the nation to attract the best men and women to the teaching office, it will also be a wise policy to provide inspectors to encourage these teachers to strive untiringly to attain their respective ideals. In other words, the area of selection of inspectors must be immensely extended. Salaries should be doubled; teaching experience should be a primary qualification for such posts; the gift of an understanding sympathy should be another. A profound knowledge of a single subject of the curriculum is seldom a sound qualification in a primary-school inspector, since it tends to obscure his wider educational outlook, and reduces him to the level of the faddist. The most useful type of inspector would be one who would come into a school and serve as an ideal supply teacher, illustrating in a practical manner, and under the normal conditions of the school time-table, any suggestions he wishes to make for the improvement of the general scheme of instruction. The suggestions now made by inspectors are not always helpful; one, for example, will strenuously oppose any proposal to teach formal grammar in a school; a colleague who visits the same school at a later date will vigorously support such a proposal. Head teachers, in consequence, gravitate naturally towards the line of least resistance, and the ultimate result is that their own ideals become not only more difficult of attainment, but longer in the process of their realization.

Upper Standard Courses.

THE raising of the school-leaving age to fourteen years will necessitate additional courses of instruction in numerous schools where no central or junior technical schools are available. The prolonged discussion as to whether the necessary instruction should be given

in the existing schools or in special senior departments does not appear to be approaching a definite conclusion. The probability is that the appointed day will arrive with no adequate provision available for these older children. It is true that Education Authorities, inspectors, and teachers are all considering the problems of accommodation, staff, and curriculum, but they are mostly working as separate bodies. If the principle of Whitley Councils could be adopted in each area, there is no doubt that sound working schemes would soon be drawn up. Anything in the nature of uniform schemes drawn up by a central governing body is foredoomed to failure, since each district has its own special needs which require differential treatment.

Primary Education as a Profession for Women.

THE steady decline in the entry of boys to the primary teaching profession has now become so pronounced in many districts that there have been no boy-student teachers for many years. On the other hand, the supply of girl entrants has always been steady, though subject to periods of diminution. Owing to the insufficient salaries now given to teachers in primary schools, considerable numbers of men teachers have been unable to exist, and, in consequence, they are eager to take up official posts in educational administration and allied fields of work. The brighter prospects afforded by the new continuation-school service and secondary schools are being closely studied by primary-school teachers, and there is not the slightest doubt that they will largely apply for the new posts, and that, as a result, the dearth of men teachers in the primary schools will be gravely accentuated. The movement is almost certain to extend to the head masters of primary schools, who will have the prospect of adding £100 per annum or more to their salaries, with an appreciable diminution in their scholastic responsibilities. It would appear, therefore, that the economic factor will tend, with cumulative force, to eliminate men teachers from the primary schools.

The Return of the School Medical Officer.

THE demobilization of school medical officers will enable one of the most hopeful departments of public service to be resumed effectively. The health of the nation's children has suffered severely from the influenza and measles epidemics which have prevailed during the last war years, and teachers have been hopelessly at sea in their endeavours to cope with the conditions of school health which have prevailed. The attachment of a doctor and nursing staff to each group of local schools could not fail to work a wonderful improvement in the health of children. Owing to the enforced neglect of remedial treatment connected with eye, ear, teeth, and throat troubles of children, it is possible that there has been a greater liability to contract prevailing sickness. School attendance throughout the country shows a grave diminution during the last few years, and this has prevented children from securing the fullest benefit from the teaching given in the schools. There is a general feeling among teachers that the full resumption of school medical inspection will serve as an efficient check to the infectious diseases of children.

N.U.T. Notes.

THE decision of the Executive to recommend the admission of uncertificated teachers to full membership of the Union upon the same financial terms as ordinary members opens out the prospect of a considerable extension of Union activity. There is no doubt that the passage of the Superannuation Act gave a great impetus to the movement in favour of widening the basis of Union membership, and there is every prospect that the Easter Conference will adopt the recommendation of the Executive. In this event the membership of the Union is certain to increase substantially; it already exceeds 100,000, and there are sufficient uncertificated teachers to give a 40 per cent. advance upon this total. One result of the closer association of the two grades of teachers would probably be to encourage uncertificated teachers to qualify for the full certificate; another would be to dispel the sectional feeling which has tended of late in certain areas to creep into the schools; a third would be to improve very materially the status and prospects of uncertificated teachers. So far as the Benevolent and Orphan Funds are concerned, there have never been any differences between certificated and uncertificated teachers; the latter have, in fact, been among the most strenuous supporters of the Funds; and the common meeting ground of the professional charities has always served as a binding link among all grades of teachers. It may be anticipated, therefore, that the inclusion of uncertificated teachers within the Union will signify the absolute cohesion of primary school teachers as a professional body.

AN important and fully representative Sub-Committee has been appointed by the Executive to consider and report upon (1) the question of the promotion of pupils from primary to secondary or other higher schools; (2) the basis upon which scholarships should be awarded from one type of school to another. These questions arise naturally from the programme of reconstruction in education recently drawn up by the Executive. It is proposed by the Executive to submit the scale of salaries for secondary-school teachers as a specific motion on the Easter Conference Agenda. The arrangements for the Cheltenham Conference show that the social side of the gathering is to be resumed. During the war-years the programme was severely restricted to professional and educational matters. It is suggested that the Mayoral reception, or "At Home," and the Conference Ball shall be resumed this year; and no doubt college reunions upon a generous scale will be organized once more during the evenings of Conference week. The return of so many thousands of service teachers cannot fail to react favourably upon the professional and social sides of the Annual Conference; and the Easter meetings this year promise to be exceptionally interesting and successful.

CORRESPONDENCE.

EDUCATION WITHIN THE ARMY.

To the Editors of *The Journal of Education and School World*.

SIRS,—The "Occasional Note" in your February issue gives a fair description of the present position of what is known as the Army Education Scheme. But one gathers from the semi-official *communiqués* which from time to time are issued to the lay press that education *within* the Army—with accent on "within"—is the more correct title; indeed, a number of acute civilian observers, accustomed to weigh the meaning of words and phrases, have already noted this distinction.

It would be unfortunate if the War Office authorities and S.D. 8 were to adopt a *noli me tangere* attitude towards their educational efforts, as implied by this unhappy choice of title, or to take up a position of dislike to criticism and suggestions from civilian outsiders, who may happen to know something about education and have a longer experience. On the contrary, the War Office, being new at the job, should welcome all the criticism and help they can get, and be ready to furnish such details of what they are attempting as will enable civilian educationists to judge of its value.

The present position of the Scheme of Education within the Army, and the methods of continuous press advertisements of S.D. 8, is rather suggestive of the showman at the fair, who stands outside his tent beating a big drum, and cries, "Walk up, ladies and gentlemen; walk up and see the wonderful performance that is going on *inside*."

Now, the fact that two millions of pencils and fifty tons of books have been carried into the tent for the performance does not impress the educationist outside, who is unaccustomed to measure his activities or render his educational statistics to the public in that way. It would be more instructive if some of the performers inside the tent told us what they were doing, because the military only are allowed inside the tent—the entertainment is for soldiers only.

Neither does it give us educationally useful information to be told that the performance inside includes every subject, ranging from bootmaking to Chinese—from folk-songs to shorthand. But it rather staggers educational administrators outside, who have for years been struggling with a less ambitious programme, and know full well that, after demobilization, it will fall to their lot to continue the performance in the open. The very amplitude of the programme causes them to wonder whether S.D. 8 and the showman have not got "our Mr. Fisher" inside their tent disguised as a colonel!

And the whole movement has sprung up so suddenly that we hardly know where we are. First a small body, S.D. 8, appointed by the War Office—but on what principle and on whose recommendation as to educational fitness and experience nobody knows—and with one civilian assistant, selected by themselves, to direct their footsteps. Apparently this body is a sort of military Board of Education, and takes unto itself a large number of people as a sort of advisory committee, whose functions, so far as we are permitted to know, are not yet clearly defined.

Next we have a number of staff officers for education, selected and appointed by S.D. 8 and attached to the various commands. What the duties of these are is not made evident to the civilian; but they may be compared to County Education Officers working

(Continued on page 160.)

DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE**FLORIGENE** (Regd.)**VERY EARLY** in the **EASTER VACATION** for Best Results.**(BRITISH MADE.)**

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" **ALLAYS** the **DUST** and **DIRT** for **2 TO 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" is also easily and quickly applied, and saves time and labour.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

under the parental control of S.D. 8. Under them in some way come the education officers for camps and formations, the principle of whose selection is not clear. Apparently these gentlemen do the work: the others talk about it. The chief trouble is that these camp and formation education officers are constantly changing: the apparent life of any one of them at a given centre does not on an average last longer than two months. Now, men may come and men may go, but from the point of view of educational efficiency it seems desirable to keep the same education officer at the same camp, even if all the students move on and a new lot comes in; and similarly to retain as much of the original teacher staff in the same camp or garrison as military requirements will permit, even if they have to be transferred from an outgoing to an incoming unit.

The inherent defect of the Scheme of Education within the army is one of principle. Instead of a gradual growth and development from below, it is a superimposition from above, founded on a borrowed idea—or ideal. It originated in the individualistic efforts of a number of scattered enthusiasts—Y.M.C.A., Chaplains, and a few officers who were keen on education, who did not spare themselves in their effort to fill up the spare time of the men with whom they were in close personal contact with something useful and distracting from the monotony of trench warfare. It was a thing in which the enthusiasm and personality of the teacher was everything. In this stage there were no limits to which the movement might not aspire. It was voluntary, and based on individualistic enthusiasm. Now the whole thing is poured into a rigid War Office mould, with all the stricture of military control, and, so far as parade lectures are concerned, with the added taint of compulsion.

But the original enthusiasm is still there—some of it. One enthusiastic General has visions of a sort of university within the Army, as the result of the ministrations of S.D. 8. At present, however, the methods of that august body appear to be those of hurried improvisation—of teachers manufactured while you wait, in courses of a few weeks' intensive study of theory and practice of teaching adults, hardly a secure foundation on which to build up a university. Hasty improvisation of education in war time and in a war atmosphere is understandable and bearable, but will it be accepted when the stress and strain of war atmosphere is removed? Will not the more serious students under the scheme for education within the Army seek to get their education from civilian teachers outside rather than submit to makeshift improvisation and compulsion within? And if their teachers within the Army are demobilized back to their civil education work, will not these students try to follow them out?

Obviously, therefore, it is expedient for the Local Education machinery to get into close touch and co-operation with the military. It is not for me to say how, but I might suggest that the civilian element should loan a certain number of its administrative and teaching staff to the military, to act as education officers and teachers in camps and formations, attaching them to the Y.M.C.A. for that purpose, and so avoid the necessity of giving them temporary military rank. This plan has the merit of not disturbing the military machine, and avoids the necessity of transfer of military education officers and teachers when units are moved to and from a camp, and so secures the permanence and stability requisite for any real educational work. To such an organization professional teachers already in the Army would naturally gravitate, as well as any students the military could permit to remain in the camp till called for to rejoin their units.

It would not be education *within* the Army strictly, but it would be education near it, and it would throw teachers and scholars into the hands of those people who will have to handle them when they are demobilized. Also the Y.M.C.A. being a flexible body, accustomed to conditions of camp life, could supplement any educational requirements that the Local Education Authorities could not conveniently meet, and being adaptable and experienced in its daily contact with soldiers, would avoid anything like friction with the military authorities.

The Overseas Dominions, with whom the idea of education in the Army is said to have originated, have, I believe, another plan. They hand over the education business to the military section of their Y.M.C.A., giving its chief teachers and organizers honorary commissions, in order to bring them technically within military jurisdiction, while leaving them educationally a free hand. In this way the Y.M.C.A. are able to draw in and reinforce themselves from civilian sources as required, and I am told this plan works well. Anyway, the great thing just now is to forge a strong and effective link between the civil and military elements, and not to keep the administration of the education of the soldier boxed up *within* the Army.

Finally, this Army Education Scheme must be a tender plant if its authors cannot stand criticism and suggestions, and they should also remember that even the tenderest plant may be killed with too much fertilizer.—Yours faithfully,

CIVIS.

BOOKS WANTED FOR EGYPT AND SALONIKA.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—On behalf of the Universities Committee of the Y.M.C.A., I should like to appeal through your *Journal* to members of the teaching profession for their assistance in the provision of textbooks for our educational work in the Army. As you are doubtless aware, many thousands of our soldiers overseas have for the last six or seven months been attending the various educational classes organized by this Association. Those in France are sufficiently well provided with textbooks, but our present funds—for which we depend entirely on public generosity—do not enable us to supply the urgent demands that have come to us from Egypt and Salonika. It would be a great pity if the work so hopefully begun were to suffer from lack of books. It is of national importance, though it has no national funds behind it, and I therefore venture, as an old schoolmaster, to make this appeal for help to schools.

I shall be pleased to supply a list which will indicate the books specially wanted in various subjects. Any of these, if no longer needed, and in fairly good condition, will be very welcome, and the donors may be assured of the sincere appreciation and gratitude of the gallant men who will use them.

Books collected should be sent to the Red Triangle Library, Wimborne House, Arlington Street, London, S.W.1; and sacks for packing and addressed labels will be forwarded on application.—Yours truly,

A. WATSON BAIN,
Secretary and Librarian.

THE EDUCATION OF THE SMALL-HOLDER.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—I should be very grateful if any of your readers could advise me concerning the training of a lad of sixteen and a half, who desires to take up some form of out-door work in this country as a means of livelihood. He would like, ultimately, to become a small-holder. The difficulty is, How is he to train for such work? So far as I know, there is no school or college in this country where he could be thoroughly prepared for such work, though I understand that girls who want to become small-holders can be given practical and scientific instruction in market gardening and stock-keeping by the Land Army. Who shall say the female sex suffers from any disabilities nowadays?

The lad in question has a most marked aptitude for gardening, has successfully run his own allotment for the last two years, and has for the last year worked under a first-rate gardener on a nobleman's estate. It is now desired that he should go for a year or two and study the scientific side of fruit, vegetable, and flower-culture and stock-raising. I want, therefore, information concerning (a) a suitable college for this purpose in the British Isles, (b) scholarships to enable the boy to take advantage of such training, if it is to be obtained; or, failing (a), could any of your readers tell me of a successful small-holder who would take such a lad as a pupil?—Yours truly,

February, 1919.

A TEACHER.

SOLDIER TEACHERS FROM OVERSEAS.—The inaugural meeting of a Conference called by the League of Empire for soldier teachers from overseas was held at the India Office on February 8. Prince Arthur of Connaught presided, and in welcoming the teachers said that their service at the front had been all the more valuable because they were an educated and disciplined body of men. He trusted that they would see as much as possible of the Motherland and would return home to prove themselves as good citizens of the State as they had been brave soldiers in face of the enemy. The President of the Board of Education mentioned that 20,000 elementary-school teachers of this country had served in the War. The campaign, he said, had taught the visitors much, and they would be able to tell their people at first hand how worthily our Army and Navy had upheld the traditions of our common forefathers. Sir Cyril Cobb said that the London Education Authority would do its utmost to make the oversea teachers acquainted with our educational methods, and to enable them to exchange views with English teachers, which should go far to strengthen the bonds of sympathy between members of the profession all the world over. The Archbishop of Canterbury, in proposing a vote of thanks to Prince Arthur, said that teachers had found great opportunities on the field of battle and at the fronts generally, and had used them nobly. They would be able to teach the history of many parts of the world all the better for having had personal acquaintance with the places of which they taught. The Conference inaugurated the scheme described in our last issue by the Head Master of Winchester College for the War Memorial Buildings in London to form the headquarters for teachers of the Empire.

Teachers Registration Council

Representative of the Teaching Profession
(Constituted by Order in Council, Feb. 29, 1913).

In accordance with the above-mentioned Order, a
REGISTER OF TEACHERS
is now maintained by the Council.

A MEAL IN A MINUTE

A. & C. BLACK'S MODERN LANGUAGES LIST

TWO BOOKS.

By E. MAGEE and M. ANCEAU,
Edgbaston High School for Girls, Birmingham.

LECTURES ILLUSTRÉES

(ÉLÉMENTS DE GRAMMAIRE).

Containing 58 Illustrations, of which 32 are in Colour.

Crown 4to, bound in cloth, price 3s. 6d.

Lectures Illustrées serves a twofold purpose. It is intended for children who have already studied a simpler text-book on Direct Method lines, but, to obviate the difficulty of its possible use by beginners, the grammatical exercises have been arranged in the form of revision of the lessons, simply and comprehensively.

In *Lectures Illustrées* the pictures are in themselves attractive as pictures, and interest the pupil in the scenes or the events which they portray. Ideas are thus associated with attractive pictures, and much is gained by this method.

RÉCITS ET COMPOSITIONS D'APRÈS L'IMAGE.

Containing 14 full-page illustrations in Colour
(with corresponding text and exercises).

Demy 8vo, limp cloth, price 1s.

The title of this little book describes its two-fold aim—i.e., that of a Reader and an Introduction to Free Composition in French—and the form of the book makes it suitable for rapid reading. The story or poem at the beginning of each lesson should be translated and learned by heart or reproduced orally. The first lesson, for instance, might be reproduced by three pupils—the narrator, the traveller, and the newsboy. The vocabulary is supplementary, and should enable the pupils to prepare the oral exercises without help.

BLACK'S FIRST GERMAN BOOK

An Elementary Course on Direct Method lines for the First Year.

By L. H. ALLISON,

Organizing Mistress in Modern Languages to the West Riding Education Committee, Yorks.

Small crown 8vo, cloth, illustrated, price 3s. 6d.

In the hands of a competent teacher this new book on Direct Method lines will overcome many of the difficulties that have hitherto attended the study of German in our Schools.

A PHONETIC TRANSCRIPTION of the first thirty lessons is also published, price 1s.

A. & C. BLACK, Ltd.,
SOHO SQUARE, LONDON, W.1.

SELECTED FROM MR. EDWARD ARNOLD'S LIST.

A GENERAL HISTORY OF THE WORLD.

By OSCAR BROWNING, M.A., formerly Lecturer in History in the University of Cambridge. xx+700 pages. Crown 8vo. 7s. 6d. net. Special Library Edition, 8s. 6d. net. Also in Three Parts, with separate indexes, 3s. 6d. net each. Part I, Ancient History. Part II, Medieval History. Part III, Modern History.

Selected Essays from English Literature.

Edited with Introduction and Brief Notes by ELIZABETH LEE. 2s. 6d.

The Essayists drawn upon include: Bacon, Cowley, Steele, Addison, Fielding, Johnson, Goldsmith, Lamb, Hazlitt, De Quincey, Leigh Hunt, Mitford, Thackeray, and Carlyle.

Epochs of English Literature.

By J. C. STOBART, M.A., formerly Lecturer in Ancient History at Trinity College, Cambridge. In 9 vols. 2s. 6d. each. Vol. I. The Chaucer Epoch, 1215-1500. Vol. II. The Spenser Epoch, 1500-1600. Vol. III. The Shakespeare Epoch, 1600-1625. Vol. IV. The Milton Epoch, 1625-1674. Vol. V. The Dryden Epoch, 1660-1700. Vol. VI. The Pope Epoch, 1700-1750. Vol. VII. The Johnson Epoch, 1742-1798. Vol. VIII. The Wordsworth Epoch, 1798-1830. Vol. IX. The Tennyson Epoch, 1830 to present day.

A Short History of English Literature.

By C. E. BAINES, M.A. 400 pages, cloth, 6s.

Covers the entire history of English Literature to the close of the Victorian Age. Very concise and accurate, but lucid and simple.

Grammatical English.

By F. W. G. FOAT, D.Lit., M.A., Lecturer in English at the City of London College, and Assistant Master in the City of London School. 4s. 6d.

Essay Writing and Aids to Composition.

By GUY KENDALL, Head Master of University College School, Hampstead. Cloth, 2s. 6d.

Leading from sentence-structure through letter-writing and descriptive composition to the general Essay. A most suggestive and helpful book.

Modern Essays.

Reprinted from *The Times*, with an Introduction by J. W. MACKAIL, LL.D. 5s. net.

A selection from the "Third Leaders." Fine specimens of pure, modern English, affording unique models for Essay-Writing and Composition.

A History of England.

By Prof. C. W. OMAN, Oxford University. 760 pages. Cloth, 7s. 6d. The continued popularity of this famous History is the best proof of its excellence for school purposes. Also in Two Parts, 4s. 6d. each.—Part I to 1603; Part II, 1603-1902. And in Three Divisions—Div. I to 1307, 3s. 6d.; Div. II, 1307-1688, 3s. 6d.; Div. III, 1688-1902, 4s.

A Social and Industrial History of England.

By F. W. TICKNER, D.Lit., M.A., B.Sc. (Econ.) London, late Lecturer on History at the Islington Training College. Illustrated. 7s. 6d. Also in Three Parts, 3s. each.

School World.—"This exceedingly attractive book is intended by its author to present 'such an outline of the nation's development along social and industrial lines as should, in his opinion, be read by all young students as part of their work in history.'"

The Last Century in Europe, 1814-1910.

By C. E. M. HAWKSWORTH, Assistant Master at Rugby School. 526 pages. 7s. 6d. net.

The Ancient World.

An Historical Sketch. By C. DU PONTET, M.A., Assistant Master at Harrow School. With Maps. 6s.

The Days of Alkibiades.

By C. E. ROBINSON, M.A., Assistant Master at Winchester College. With a Foreword by Prof. C. W. OMAN. Illustrated. Second Edition. 6s. net.

Sketches of daily life in Athens, in Alkibiades' time, in narrative form, and comprising descriptions of the various duties and avocations of the Athenian citizen.

Jerusalem under the High Priests.

By EDWYN ROBERT BEVAN, M.A. Demy 8vo. 7s. 6d.

Originally written in the form of lectures, the subjects of which are: (1) The End of the Persian Period and the Macedonian Conquest; (2) Hellenism and Hebrew Wisdom; (3) Judas Maccabæus and His Brethren; (4) The Hasmonæan Ascendancy; and (5) The Fall of the Hasmonæans and the Days of Herod.

A Class Book of Geography.

By A. W. ANDREWS, M.A., F.R.G.S. Cloth, 7s. 6d.

A systematic text-book for Upper Forms, based on the study of Physical features. Interesting Original Diagrams are freely employed.

Grammaire Française.

A l'Usage des Anglais. Par E. RENAULT, Officier d'Académie; Lecturer in French at the University of Liverpool. viii + 360 pages. 5s.

Conspicuous for its wealth of illustrative examples, the result of a wide reading and critical power.

French à la Française.

A new series for children beginning French, by Lady Bell, author of "French without Tears," and Mrs. Charles Trevelyan. Illustrated by "Fish." With Notes and Vocabulary. Crown 8vo, cloth. Book I, 10d. Book II, 1s. Book III, 1s.

Latin Prose Composition.

By W. R. HARDIE, M.A., late Professor of Humanity in the University of Edinburgh. 5s.

The Acharnians of Aristophanes.

With Introduction, Critical Notes, and Commentary. Edited by W. RENNIE, M.A., Fellow of Trinity College, Cambridge; Lecturer in Greek at the University of Glasgow. 6s. net.

A Textbook of Physics.

By R. S. WILLOWS, M.A., D.Sc., Head of the Department of Physics at the Sir John Cass Technical Institute, E. 280 Diagrams. Second Edition. 7s. 6d. net.

Written up to the standard required for the Intermediate Examinations of the Universities and for the Civil Service Commission.

A Manual of Human Physiology.

By LEONARD HILL, M.B., F.R.S., Director, Department of Applied Physiology and Hygiene, Medical Research Committee. With 173 Illustrations. 7s. 6d.

ARNOLD'S EDUCATIONAL CLASSICS.

The leading idea of this series is to present selections from the works of the greatest writers upon education, with just so much of Introduction and Commentary as is necessary for their intelligent study. The present series of volumes, edited in each case by a well-known expert, under the general supervision of Professor J. W. ADAMSON, selects the most characteristic passages from a wide range of writings, so that in future it will be possible to study them at first hand without the labour of perusing much superfluous matter.

5s. net per volume.

Vives and the Renaissance Education of Women.

Edited by FOSTER WATSON, M.A., Professor of Education in the University College, Aberystwyth.

The Educational Writings of John Locke.

Edited by J. W. ADAMSON, Professor of Education in the University of London.

Rousseau on Education.

Edited by R. L. ARCHER, M.A., Professor of Education in the University College, Bangor.

Pestalozzi's Educational Writings.

Edited by J. A. GREEN, Professor of Education in the University of Sheffield.

Froebel's Chief Writings on Education.

Edited by S. S. F. FLETCHER, M.A., Ph.D., Lecturer in Education in the University of Cambridge, and J. WELTON, M.A., Professor of Education in the University of Leeds.

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.1.

PITMAN'S

HANDWORK and GEOGRAPHY

G. PICKERING, F.G.S.,
and J. B. ROBINSON, F.R.G.S.

Most of this book is a handy guide, with numerous useful exercises to all the outdoor work which lies on the borderland between Mathematics and Geography, and forms an elementary introduction to Surveying and Geodesy.

Well illustrated.

Part I, 102 pp.; Part II, 140 pp., each 3/- net.

FIELD WORK FOR SCHOOLS

E. H. HARRISON, B.Sc., L.C.P. and C.A. HUNTER.

Commences with linear and angular measurement, and contains exercises on all the various operations necessary in making a map. Triangulation, measurement of heights and distances, &c., are dealt with in a simple manner.

TYPICAL SCHOOL JOURNEYS

G. G. LEWIS.

The Author is well known as one of the pioneers of the School Journey Movement, and he has in this book described a series of open-air lessons which have actually been given to his scholars on Hampstead Heath and elsewhere.

1/9

IN THE GARDEN

J. EATON FEASEY.

A series of lessons in Nature Study—mainly plant life—to be given in a school garden. The course is complete as far as it goes and should be of the utmost value to all schools which have a garden.

14 full-page plates and other illustrations.

2/-

GARDEN AND PLAYGROUND NATURE STUDY

By the same Author.

"The Author . . . travels a somewhat new road in Nature Study, and the result is refreshing. It is a well-written book profusely and well illustrated by photographs and line drawings."—*Schoolmaster*.

65 Illustrations.

2/6 net.

IN THE OPEN AIR

By the same Author.

A series of outdoor lessons in Arithmetic, Mensuration, Geometry, &c., which shows how the playground and school garden can with great advantage be utilized for many lessons now given in crowded classrooms.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	£5 10 0	One Column [$\frac{1}{2}$ page]	£3 0 0
Half Column [$\frac{1}{4}$ page]	1 15 0	One-Eighth Page	0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—
6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d. *prepaid rate*.

Lectures, Classes, Non-Resident Posts, &c.—4s words for 3s.; each 8 words after, 6d.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—

MR. WILLIAM RICE,

3 LUDGATE BROADWAY, LONDON, E.C.4;

to whom all remittances should be made payable. Orders and Cheques should be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: MR. WILLIAM RICE, 3 LUDGATE BROADWAY, E.C.4.

EDUCATION OF GIRLS OUT OF SCHOOL.

By AMY B. BARNARD.

IN addition to the three main educative influences of the Home, the School, and the Church, others have been more and more touching girl life during the war. These include Girl Guiding and the work of the Girls' Life Brigades. Both movements have an increasing power in shaping the womanhood of the future. In particular Girl Guiding is bringing under its wholesome and beneficent sway elementary and secondary-school girls at a time when it has become imperative for women to take civic responsibilities, and bring trained minds to bear upon new social and economic problems.

It is obvious that the future destinies of the race are largely in the hands of the schoolgirl of to-day; equally obvious that, with the upheaval attendant on the war, the spirit of unrestraint has touched girl life. It is easier than ever for a girl to degenerate into a flapper unless some uplifting hand rescues her in time. Schools have laboured under peculiar disadvantages during the war, nor do they provide the same kind of mental discipline and character-forming as Girl Guiding. Their influence over day pupils is limited to a few hours daily, is more general than individual, and the teaching is compulsory and paid for—facts palpable to the pupil. For non-studious girls, who shirk home preparation of lessons, and for the specially gifted who race through it, there remain leisure hours; these are Saturday afternoons and evenings, at least, even for the average plodders.

It is just here that "the jolly sisterhood," as Sir Robert Baden-Powell aptly terms it, offers the girl an alluring prospect of play and occupation, which she joyously welcomes, unconscious that she is receiving mental discipline and character-training of the finest kind, that appeals to her nature as the Boy Scout training does to her brother's. It is,

therefore, not surprising that this movement has spread to Canada, Australia, New Zealand, South Africa, India, the West Indies, the United States, Denmark, France, Holland, Norway, Portugal, Russia, Sweden, and that there have even been three companies of Guides among the Serbian refugees in Corsica. In England the formation of new companies cannot keep pace with available "Guiders," and, though over 100,000 girls are enrolled, but a fringe of the mass of girlhood has yet been touched. This growth has proceeded steadily since 1915, when the charter of incorporation was received; but the pace was accelerated during the later years of the war. In six months one county alone increased its companies from ten to thirty-seven. Evidently the movement has gripped the imagination of the girl mind, and is bound to have increasing influence upon it.

What value has the training as a factor in the girl's education? In the first place, she voluntarily and gladly submits to it. She is proud to be a Guide. Instead of selfish idling and waste of the golden years of the teens, she is possessed by the spirit of service. Even the little Brownie of eight promises "to help other people every day, especially those at home." In the service of their country senior guides have done valuable war work, helping in military hospitals on Saturdays and Sundays, collecting materials for munitions, picking fruit and working on farms, performing orderly duties in Government offices, and distinguishing themselves for gallantry, especially during air raids.

The Guides have shown that their training induces self-discipline. A serge sleeve covered with proficiency badges has proved the strongest recommendation for a girl wishing to be trained for hospital nursing. Watch a patrol undergoing the test for proficiency in bandaging, and the reason for her welcome is explained. To bandage with the swift and sure touch of the expert, to read Morse code signalling, to launder an irreproachable pile of garments, to cook an appetizing meal, and to turn sick nurse in an emergency at home are accomplishments a girl thinks worth while. The training in handicrafts brings into play faculties little aroused at school, and the self-discipline required to work quickly, patiently, and accurately is stimulated by loyalty to the patrol and company. "Use your eyes" is one of the first axioms impressed on the learner. Hands and thoughts are busy over useful or ornamental work, while the mind is being self-disciplined. The only punishment needed is consciousness of failure to ensure the proficiency of the patrol. Whole-hearted loyalty is paid by the average Girl Guide to the captain of her company, who on her side delights to inform one, "They teach themselves!" A touch of army punctiliousness in saluting, in scrupulous attention to the details of the neat uniform, and in the use of some army terms, is an aid to discipline, suggesting to the girl the dignity and responsibility of being a Guide.

The Guide learns to be neat, obedient to orders, respectful, helpful, quick-witted, deft-handed; but she also learns, by physical exercises, study of the laws of health and games, to preserve her body in health. Very wisely, drilling, boating, swimming, cycling, camping, life-saving, first aid, home nursing, care of children, natural history, and woodcraft come within the scope of training, and proficiency tests for additional subjects are added to the list from time to time. A few essential tests are obligatory; from the rest the girl makes her choice.

Many a form mistress would open her eyes in astonishment if she watched a patrol leader showing half-a-dozen learners how to tie complicated knots, to bandage a fractured leg, to act as interpreter, to shoot, or to make a blouse. There is no class distinction—*esprit de corps* banishes that. The Guide works not for a prize attainable by one girl alone, but for proficiency and promotion: a Brownie wishes to be a Tenderfoot; a Tenderfoot, a Guide; a Guide, a Senior Guide. If a Guide's patrol, the Snowdrops, wins fewer badges than another, the Forget-me-nots, she is ashamed, and determines to try harder at the next test. There is wholesome rivalry without ill-feeling.

An admirable characteristic is the comprehensiveness of

the training. Book learning and practical information are required, but there are other necessary accomplishments. In school and college clever students of abstruse subjects win the prizes; here character, control of others, power to teach, good behaviour, steadfastness to duty, and kindly helpfulness are recognized as of the highest importance. The camaraderie, the sociability of her comrades would cure any recluse. The girl Guide finds it natural and easy to work with others. Educative games are an attractive feature of the winter rallies, and some captains are clever at organizing such as involve quick perception, rapid thought, memory of names, places, colours or numbers, adapting the training of kindergarten and "Montessori" to the age of the teens. "The girls love it," remarked one enthusiastic captain at the end of a delightful afternoon so spent.

A girl Guide can hardly be other than patriotic, and that in the best sense. "To be loyal to God and the King" is the first of the promises she makes—on her honour.

Very important in the eyes of the girls is the enrolment ceremony, when pledges are given by the new recruits; it might, indeed, in the placing of the hat upon the head and the pinning on of the badge, remind the girl of the ceremony of knighting. The earnest look on the young girl's face, the kindly expression of the motherly commissioner as she remarks, "I trust to your *honour* to keep this promise," make an indelible impression upon onlookers.

The objection sometimes heard, that Girl Guiding distracts from school studies, and absorbs time that should be devoted to them, is met by the reply that large secondary schools and boarding-schools are glad to have companies of guides, the time absorbed being amply justified in the all-round mental and physical benefit received by the scholars.

The movement inculcates tolerance, for it is non-political, non-class, and non-sectarian; it also has a spiritual influence, for every Guide is expected to attend a place of worship. Often the hall attached to this serves as head-quarters, and the company is recruited from the congregation. In such an environment the finest companies flourish, and their music is a special feature.

Future historians will probably regard as a most important factor in the education of girls in this democratic age the movement initiated as a sister organization to the Boy Scouts, both of which have now attained world-wide significance.

EDUCATION OTHER THAN ELEMENTARY.—In an address delivered at the annual general meeting of the Association of Directors and Secretaries on January 6, Mr. W. A. Brockington, Chairman of the Association, spoke among other subjects on the passage of talented children from the elementary to the secondary school. He pointed out that the obligation to keep their children at school between the ages of fourteen and sixteen will bear heavily upon the poorer classes of the community, unless there is a large increase in the number of secondary school scholarships with substantial maintenance allowances. Moreover, the necessity of placing all secondary school scholarships upon a qualifying and not a competitive basis becomes urgent. We shall have to estimate the number of children who will be qualified in any year to receive a full secondary education instead of laying down the number of scholarships which may be competed for. For many years in England we have paid lip-service to the doctrine of equal opportunity. There can be no real equality of opportunity so long as the child of comfortable parents qualifies for entrance to the secondary school by passing an easy admission examination and the poor man's child competes for his place. Referring to the continuation schools which are to be established, he said, in the new continuation school much less dependence can be placed upon the overtime teacher or worker. Some overtime employment will remain. But the number of full-time teachers ultimately required, according to the lowest estimate, is appallingly heavy. There are signs of distrust in many quarters as to the character of the teaching in the new continuation schools. The fear is that it will be too academic. We cannot be content with continuation schools without bias or intention, whether that bias be social or technical. Because continuation schools have been made compulsory there is greater need that they should be made attractive; and they will fail to be attractive unless they have a practical bearing either upon the daily occupation or upon the interests and aspirations of their pupils.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

The Address delivered before the Association of Colleges and Preparatory Schools of the Middle States and Maryland at Princeton, N.J., by President Nicholas Murray Butler, of Columbia University, attracted much attention in the United States, where, indeed, it has been described (*Education*, Boston, XXXIX, 5) as the most forceful and suggestive utterance of the year 1918. We have the report of it printed in the *Popular Educator* (XXXVI, 5). The War, says President Butler, has distinctly helped us. It has killed other things than human beings, and it has burned up other things than towns, libraries, and churches. Gone for ever are German psychology without a soul, and German organization for purely material gain. The War has taught us that the proper place of efficiency is that of the servant of a moral ideal, and that efficiency apart from a moral ideal can accomplish nothing but mischief. We have learnt from it to avoid German ideals, and to cling to those principles and purposes which have made France and Great Britain and the United States what they are. As to American education in the future, it will be well "to insist that education is a process of body-building, spirit-building, and institution-building, in which process skilful and well interpreted use is made of the recorded experience of the human race, of the capacities, tastes, and ambitions of the individual, and of the problems and circumstances of the world in which he at the moment lives. The purpose of this body-building, spirit-building, and institution-building is not simply to strengthen and perpetuate what others have found to be useful and good, but rather by building upon that to carry both the individual and the race farther forward in their progress toward fuller self-expression and more complete self-realization. To attempt to turn education into a merely mechanical process, with a purely gainful end, is nothing short of treason to the highest, most uplifting, and most enduring human interests."

Keeping the higher view of education in mind, we see, continues President Butler, that the knowledge most worth having is that which best nourishes and strengthens the human body, which best furnishes and disciplines the human spirit, and which best contributes to an understanding and improvement of human institutions. Given these standards, the process of applying them becomes one of good judgment and practical sagacity. And if we regard man in his capacity as a self-directing individual, there are three fundamental aspects of civilization which have permanent significance for him, "These fundamental aspects are ethics, the doctrine of conduct and service; economics, the doctrine of gainful occupation; and politics, the doctrine of reconciliation between the two and of living together in harmony and helpfulness. These are the three subjects which must lie at the heart of an effective education which has learned the lessons of the War."

There are not wanting those who decry experimentation as the unprofitable pursuit of fads and phantoms; but education, being a science as well as an art, must use the same procedure as other sciences. And it is because we have obeyed tradition all too slavishly that we still know so little of education, so little of the psychology of the child, so little of the means by which the individual may be adapted to social requirements. America is disposed to lead the way in a quest for light. Thus a number of prominent schoolmen in New York City and the neighbourhood have organized a New York Society for the Experimental Study of Education. Among those connected with it are Prof. E. L. Thorndike (of Teachers College), Prof. G. D. Strayer (President of the National Education Association), and Dr. Abraham Flexner (of the General Education Board), together with many district and associate superintendents. How to make at once the citizen and the scholar a conspicuous aim of American experimentation. Contemporary events indicate that in our teaching we have dwelt too lightly on community life and the interdependence of men; experiment might reveal to the school a means of strengthening the body politic to resist epidemic attacks of civil disorder.

FRANCE.

We have before us an analysis published in *L'Ecole et la Vie* (ii, 18) of Le projet ministériel de relèvement des traitements. From Section V it appears that France will adopt the principle of obligatory Continuation. The chief part of the analysis relates to improvement in the position of teachers. It is intended to guarantee even to the humblest teacher an existence not less comfortable

than that which he enjoyed before the War; and, the cost of living being more than doubled, the fundamental salary of the primary teacher will be raised from 1,200 francs to 2,800 francs. Moreover, the better teachers will be encouraged to qualify themselves for office in the higher primary schools and for the primary inspectorate. Hitherto women have been paid on a lower scale than men; for it was argued that, having no military service to perform, they could reach the higher salary classes sooner than men, and they began to teach at seventeen years of age, the men only at eighteen. Henceforth military service will be reckoned as civil service, and both men and women may commence teaching at seventeen. Duties and qualifications being alike for the two sexes, France recognizes fully and finally the right of women to equality of payment. The appropriation for public instruction before the War was 290 million francs; the increments of salary proposed will involve an annual expenditure of 640 millions.

The name of Chambéry was associated with a certain stigma on French primary teachers. The Republicans of Chambéry met on February 20, 1916, and decided that, in atonement, they would initiate a great movement for a monument to fallen *instituteurs*. It was to be set up before the Ecole normale supérieure of Saint-Cloud, as a witness to coming teachers of the valour of their forerunners. The execution of this plan, delayed by events, is now to be begun. A letter addressed by a Committee presided over by M. Painlevé, formerly Minister of Public Instruction, to all the municipalities of France, invites subscriptions towards the cost of the monument. It says: "5,126 *instituteurs* dead on the field of battle, 6,997 wounded, 30,252 mobilized, form a glorious answer to the charge of disloyalty levelled at the noble phalanx of lay teachers." Of secondary teachers and inspectors, the loss by death in war is set down at 460; whilst Paris and the provincial Universities have to mourn for 259 professors of literature, science, medicine, or law. How these will be commemorated we do not know; perhaps French art will be able to devise some memorial to the dead that is not an eyesore to the living.

GERMANY.

With the opinions and methods of the Spartacus group we are not concerned; the genesis of the name lies perhaps in our province. The original Spartacus was the famous shepherd, bandit, and gladiator who led the rebels in the Servile War of B.C. 73-1, and who, having taken refuge on Mt. Vesuvius, caused his men to glide down the chasms of the mountain (*per fauces cavi montis*) and deliver an unexpected attack on the Romans. Of this Spartacus it does not appear that our own Bolsheviks have ever heard; his name is, however, not unfamiliar in Germany. Hermann Lingg wrote a poem, "Spartacus," which is described as having a truly Roman tone. In 1849, Gottfried Kinkel, poet and revolutionist, founded a socialist review called *Spartacus*, as the organ of enslaved Germany; whilst in 1877 the anarchist, Johann Joseph Most, in his lectures denounced Mommsen as a falsifier of history because he did not see in Spartacus "the one great man that ancient Rome produced." It is stated in German books of reference that Kinkel became Professor of German Literature in the University of London or Westbourne College, and certainly Most edited his journal, *Freiheit*, from London; so that we possess, as it were, literary associations with Spartacus. And do not those *fauces cavi montis* through which the old Spartacists made their surprise attack bear a certain analogy to Tubes? Our readers will remember that Spartacus was eventually defeated and slain by M. Licinius Crassus, the typical capitalist of the Roman world.

INDIA.

The Bombay University has passed the proposed Regulations for a degree of Teaching. The regulations lay down that graduates may be admitted to an examination after two terms kept in a recognized training institution and one year on the staff of a recognized high school, or after three years' service in a recognized high school that makes special provision for the training of its staff. The examination is to be written and oral, the written covering the science, history, and practice of education. It was stated in the course of the debate that a scheme was on foot for establishing a private or aided institution to train teachers for employment in private or aided schools.

WESTERN AUSTRALIA.

From 1872 to 1893 enrolment and attendance in Western Australia remained at a dead level. Then came a rapid upward movement, and at the end of 1917—the Report for which year we have just re-

ceived—there was an enrolment of 47,566, as against 2,338 in 1872, with 86 as the very satisfactory percentage of attendance to enrolment. Education is being more highly valued: twelve years ago it was found necessary to take legal proceedings against one parent, guardian, or employer for every 86 children on the average enrolment; in 1917 there was only one prosecution for every 346 children. The number of schools open at the end of the year was 639—an increase of 35 in twelve months. As to teachers, the percentage of the unclassified fell from 37.9 to 34.9; the average of salary showed a slight decline. Continuation classes grew considerably; but, in general, education ceased at the age of adolescence, and the Australian State is beginning to recognize the futility of expending large sums in laying a foundation that is never to receive a superstructure.

The Minister of Education urges the need of legislation in restraint of the employment of child labour. Although there is no acute poverty in Western Australia, children are exploited to their physical and moral detriment. Many girls, some of them only six years old, are regularly engaged in dancing at music-halls, and are reported by their teachers to be nervous wrecks, undersized, backward, and irregular in attendance of the school. Boys of school age have been found employed in the fish market at a port as early as four o'clock in the morning. Except that children under ten may not trade in the streets, no limitation is set on the power of greed to suck the strength of childhood.

The teachers of Western Australia answered the call of the Empire gladly. Up to the end of 1917 the roll of enlistments included 170 actual teachers and 20 training-college students. No fewer than 32 had given their lives for the cause of liberty, 20 names having been added to the list of the fallen in 1917. The school children were zealous in contributing to various war funds and in providing comforts for the soldiers.

UNIVERSITIES AND SCHOOLS.

WALES.

At the Court of Governors of the University College, Cardiff, held on February 13, Lord Glanely was elected President, in succession to Lord Aberdare, whose term of office had expired. His Lordship is one of the benefactors of the College, and it is, therefore, befitting that he should be called upon to occupy his present office during the critical period of reconstruction. Prof. Trow (the acting Principal) briefly outlined the scheme of development which the College proposes to pursue, though he was careful to point out that the only new experiment they intended to attempt was the foundation of a great school of medicine, which would be of a new type. Research work by whole-time professors would be a prominent feature of the new school, and, therefore, it is hoped that it will become not only a training institution of the first rank for medical students, but in time establish a reputation as a contributor to medical knowledge. The question of control is still in abeyance, and opinion is divided as to the soundness of the recommendation of the Royal Commission. The College objects to an independent controlling body, but in all other respects it endorses the views of the Commission. The main features of the Cardiff contribution to the general scheme of University development would involve an expenditure of £18,250 per annum on the School of Medicine, £3,000 on agriculture, and £31,495 on general purposes, which latter sum would be apportioned for new appointments, salaries, science laboratories, administration, and superannuation. At present the College receives £11,750 per annum out of the total grant of £36,500 to the whole of Wales; but such a sum is totally inadequate for the work, and all future advancement is entirely dependent on far more generous financial help.

Not only at Cardiff, but in the other University colleges, the need for readjustment of the finances has become an urgent matter. Now that hostilities are ended, students are returning in increasing numbers to the colleges, many members of the staffs are being released, and there is consequently much pressure on the existing accommodation. It is therefore important

that the counties should immediately take steps to levy the penny rate in aid of the University, because the contributions of the Government will depend on the amount which is subscribed locally. It is estimated that such a levy will amount to about £50,000, and therefore, as the Treasury has undertaken to contribute on the "pound for pound" principle, the total additional sum of £100,000, which is regarded as the minimum to meet the requirements of the Royal Commission, should be secured. Several counties have resolved already to adopt a penny rate, the latest to do so being Breconshire. Unfortunately, however, every county has thought fit to encumber their contributions with certain conditions, which will, if persisted in, seriously hamper the University authorities in the development of their schemes of reform, and to a great extent make the counties the deciding authorities on questions of University policy. This attitude is strongly to be deprecated in the interest of higher education. Why should not the allocation of the moneys be left to the unfettered judgment of the University? Each of the counties will have a strong representation on the different Committees of the University, and the counties should have confidence in their representatives to believe that no injustice or reckless expenditure will be allowed to pass unchallenged. It is high time that the atmosphere of suspicion which has so often characterized Welsh authorities when they are called upon to act in combination should be dissipated. Breconshire, for example, makes its grant conditional on increased attention being paid to agriculture, and that the counties should be given stronger representation on the Court, &c.; but these are questions which can surely be left to the judgment of the Court, which alone is in a position to take a general survey of the needs of the whole of Wales. The University should be regarded as a national organization, and not as an institution designed to further the claims of a section only of the community; and the sooner this is realized, the more effective will the University become.

By the resignation, through ill-health, of Prof. W. Lewis Jones, Professor of English, the University College, Bangor, has lost the services of a highly cultured and inspiring teacher. He has been on the staff of the College almost from its foundation, and has taken a prominent share in all Welsh educational developments. At Cambridge he gained the Members' Prize for English Essay, and is regarded as an authority on Geoffrey of Monmouth. Mr. Ifor Williams, Assistant Lecturer in Welsh, has been made Lecturer in Welsh, with a seat on the College Senate.

At the Friars' School, Bangor, of which he is the most distinguished *alumnus*, Judge Atkin uttered some very wise remarks on education. In the new era which was opening before the world, everything was going to be different from the world in which they started their careers. The true object of education was to teach boys how to learn, and he should like to suggest that that was the spirit with which they ought to come to school. Let the boys not make the mistake of thinking that on leaving school their education was over. It was only just beginning. It was because of the importance of teaching them how to learn that he attached so much importance to classical education. It was almost unique in this respect, and in his own walk of life he had found that there was no training comparable to classical training for quickening the mental powers. He also strongly advocated the teaching of boys a modicum of law which, in spite of the opinion of many people, was quite a rational subject, for it was founded on reason, and it was impossible to get a true view of English history without some knowledge of law. Besides, they would find one of the great maxims of English law very useful in life—hear the other side.

Last year the Flintshire Education Committee, on the advice mainly of some of the head masters of the intermediate schools in the county, passed a resolution that no school in the county would be allowed to seek recognition as a school for advanced courses. Various reasons, some of them rather original and strange, were put forth in favour of this very extraordinary attitude. However, this year, in defiance of the resolution, the Chairman of the Hawarden School applied for and obtained the privilege of getting the school recognized for advanced courses in science and mathematics. The County Authority, on the other hand, were still unrepentant and stuck to their guns, with the result that the school has been forced to refuse the extra grant. The whole business strikes one as rather comical.

SCOTLAND.

Dr. James Younger and Mrs. Younger, of Mount Melville, have given £30,000 to the University for the erection of a quinquenary Memorial Hall, to be used for graduation ceremonials. The building of a graduation hall was one of the objects in view at the quinquenary celebration in 1911. A sum of over £5,000 was then obtained, and it is suggested that part of this should be spent in building an organ for the new hall. **Mrs. Purdie**, widow of the late Prof. Thomas Purdie, Professor of Chemistry in the University, has bequeathed to the University the residue of her estate, amounting to about £25,000, as a capital fund for the promotion of chemical research, including post-graduate scholarships, equipment, apparatus, &c. The University has also an endowment fund of £8,000, given by Prof. Purdie for chemical research in the new laboratories of the United College.

Mr. Robert F. Barclay has given £5,000 to the University to found a Lectureship on Surgery and Orthopaedics in relation to infancy and childhood. **Glasgow.** This lectureship, as well as the corresponding Medical lectureship, founded by Mr. Leonard Gow, will be connected with the Glasgow Royal Hospital for Sick Children. **Mrs. Loudon**, widow of Mr. George F. Loudon, of Monkton, Ayrshire, has bequeathed to the University £3,000, along with an additional £3,000 from her husband's estate, for the foundation of a Lectureship in Engineering Production, &c. The late Rev. Dr. John Maclean, St. Columba's Parish, Glasgow, has bequeathed £3,500 to the University for the foundation of a Semitic scholarship, open to students of any of the Scottish Universities who have completed their courses of study in arts and divinity, and are preparing to enter the University of the Church of Scotland. The successful candidate must study for at least six months in a country where Arabic is spoken and pursue a further course of study for the remainder of his year of appointment. Dr. Maclean has also bequeathed £2,500 to the University for the foundation of three bursaries in the Faculty of Arts, to be held by Gaelic-speaking students who intend to become ministers of the Church of Scotland. **Mrs. Elizabeth Parlange** has bequeathed £1,200 to found a bursary in Divinity, and two sums of £600 each to found two bursaries in Medicine. The University Court have approved a proposal to establish a Lectureship in Comparative Philology.

The fund for the endowment of a Chair of Commerce in the University is approaching completion, the amount already subscribed being over £18,000. **Aberdeen.** It is hoped that the work of the Chair may begin next autumn.

The scheme issued by the Secretary for Scotland, fixing the areas, districts, and number of representatives on the new Education Authorities, is being much criticized by School Boards throughout the country, and numerous proposals for amendment are being made. Owing to the adoption of the county area, which was doubtless inevitable, the problem of making a fair adjustment of representatives to electorates is extremely difficult. One of the main difficulties is that so large a proportion of the population of Scotland is concentrated in the Clyde and Forth Valleys and their neighbourhood, while in some other parts of the country population is sparse and railway communication is poor. If population alone were taken as the basis of representation, the Education Authorities in the most populous parts would be far too large to be efficient, and in the less populous parts they would be too small. There are, of course, other difficulties—e.g. in counties which are partly agricultural and partly industrial. It seems, therefore, quite impossible to make an ideal scheme.

The salary question is still being vigorously discussed, and in some parts of the country strikes of teachers are threatened. The tension ought to be considerably lessened when the new Educational Authorities are elected, and the multitude of small School Boards disappears.

IRELAND.

Neither of the two Vice-Regal Committees has as yet published its report, although both are near the end of their labours, and will in all probability have completed their work before this issue appears. It will then be the business of the

Government to take the next step. There is no doubt that many reforms in Irish education are needed, and the case for improvement has been strengthened greatly by the sweeping reforms across the water last year. There is one remarkable sentence in the report of Lord Haldane's Committee on the Machinery of Government, which shows how far Ireland lags behind what is now considered a truism in educational progress. It runs: "In the case of education, we find that the principle of concentrating the main functions of central government in relation to a specific service in a single department is already recognized." In Ireland this is not so. We have the National Board, the Intermediate Board, the Department of Technical Instruction—three bodies with little, if any, correlation; while, in addition—certainly in intermediate education—the Castle also formulates rules of its own. Here is a clear case for bringing Ireland into harmony with a "recognized principle." Of the many defects of Irish secondary education, the two outstanding are, first, this, and, secondly, the utterly inadequate salaries of the teachers, accompanied as they are by absence of proper security of tenure and of pensions. Without a clear, definite scheme of reform in these two matters, the various attempts at improvement, praiseworthy as they are in aim and intention, are hampered at every point. During the past year we have had three such attempts—the £50,000 Duke grant, the Registration of Intermediate Teachers, and the new Science and Art Syllabus. It may be added that it is obvious to educational reformers that a thorough reform is compatible with the complete maintenance of the present freedom of religious teaching for all Churches.

During February and the early part of March the Royal Dublin Society have organized a series of evening lectures to be delivered in their theatre dealing with Irish Reconstruction Problems, as affecting the mineral resources, the coal resources, glass, industrial alcohol, the manufacture of Portland cement, horticultural resources, power supply in relation to reconstruction, peat resources, Irish woods and their restoration; but the first place was rightly given to a lecture by Prof. John Joly, who is to be congratulated on his recent election to a Fellowship in Trinity College, on "The British Educational Mission to America." No better service can be performed for Irish education than the publication of what the United States is doing for its children. Prof. Joly, who was a member of the Mission, explained the extraordinary interest shown by the Americans in every educational question, whether it concerned the high school, the commercial high school, the college and University, and particularly the agricultural and technological work of the college and University. He pointed to the very large sums of money spent by the several States, or bequeathed or given by generous patrons, in aid of education. The two great ideals before Americans at the present time were the peace of the world and the wise bringing up of their children. There was equal opportunity for the boys and girls of all classes, and the various branches of education were so arranged that there was no difficulty in the humblest child, provided that he or she has sufficient ability, proceeding from the lowest grade to the highest. In America the University is in close touch with the people, and maintains its hold on them by means of its system of high schools.

The annual meetings of the Classical Association of Ireland were held, as usual, on the last Friday in January in the Lecture Theatre of the Royal Dublin Society. The President for 1919, Prof. W. A. Goligher, chose for the subject of his inaugural address, "The Splendour of Rome." It was bold and brilliant. It compared the Romans with the Greeks, much to the detriment of the latter. The chief characteristic of the Romans he maintained to be "in public and in private affairs a determination, a steadiness of aim, as nearly inflexible as human beings can attain." It carried with it "a deliberate disregard of other people's point of view." Their great gift to the world which they conquered was that of law, order, and peace. He claimed for the Romans that their art was not a mere slavish imitation of the Greek, but had essentially characteristic elements of its own that went much beyond that of the latter; while the Roman literature—Virgil, Livy, Caesar—he regarded as beyond comparison superior to that of Hellas. Such statements were bound to provoke discussion, and the claims of the Greeks were ably put forward by Dr. L. C. Purser and Prof. P. Semple, of University College. The chair was taken by the retiring President, Mr. J. Thompson, Head Master of the High School, Dublin. The President-elect for 1920 is Prof. R. M. Henry, Professor of Latin, Queen's University, Belfast.

Defects of Irish Secondary Education.

REVIEWS AND MINOR NOTICES.

PROF. SORLEY'S GIFFORD LECTURES.

Moral Values and the Idea of God. By W. R. SORLEY. (16s. net. Cambridge University Press.)

Not always is the Gifford Trust fortunate enough to secure a lecturer who enters so truly into the spirit of the pious founder as does the writer of this book. He starts by quoting certain passages from Lord Gifford's will, and leaves it to the reader to judge how far the lectures here reproduced fulfil the conditions of the trust. Without dealing with religion, as that term is technically understood, Prof. Sorley has done true religion an eminent service by removing many of the difficulties that religious people of philosophical leanings sometimes experience. As was to be expected, he adopts the idealistic position. His thesis is that the system of things is a universe, and not a multiverse, and that purpose is of its very essence. He declines, therefore, to separate morality from reality as two independent entities. He believes that what should be may fairly be taken as a guide to what *is*. Morality has reality, but not independent reality. It is self-sufficient to the extent of having objectivity. He distinguishes between the scientific view of the universe as a system of causes and the ethical view that sets up a system of values, and he maintains that the values have as clear an objective validity as the causes of the man of science. The stupendous whole of the universe cannot be split up into separate parts. "A living whole cannot be identified with the parts into which it is capable of analysis, nor be regarded as the sum of these parts."

This sets the inquirer on a hunt for the driving-force of the universe, and Prof. Sorley makes capital play with the distinction between deism and theism, his examination resulting in as satisfactory a point of view as is likely to be reached in such a complicated problem. Even his critical fellow-Scots must be pleased with the skilful way in which the Professor pilots them through the desperately tortuous sounds of the discussion on free-will. To be sure, he has the advantage of calmly declining to recognize any real contradiction between divine foreknowledge and human free-will, but, on the other hand, he does not shirk the still more perplexing problem of the origin and existence of evil. By accepting the doctrine of what may be called delegated freedom, Prof. Sorley retains the most complete freedom for God along with the relatively complete freedom of man. His contention throughout is that ultimately the unity of the universe must be conceived as ethical, and, this being so, God divests Himself of the function of determining actions in certain spheres, in such a way that human beings—Bergson's "centres of indetermination"—may work out their own moral salvation. To the plain man there is something refreshing in this direct reference to the individual. Prof. Sorley is insistent on the practical value of philosophy in everyday life, and is accordingly keen on individuality. "Notwithstanding the abstract arguments which enter into philosophy, its ultimate interest is in the individual." The book is a rare combination of severe reasoning and sympathetic insight into human needs.

HISTORICAL AND DIPLOMATIC PROBLEMS.

The European Commonwealth: Problems Historical and Diplomatic. By J. A. R. MARRIOTT. (15s. net. Clarendon Press.)

Mr. Marriott has been well advised to collect and reprint in this handsome volume revised editions of fifteen articles which he contributed to various leading magazines during the course of the War. They all relate to questions raised by the War itself, though only two of them—viz., the first and the last—are strictly relevant to the title chosen as a general label for the collection. An attempt has been made to give unity to the series by judicious arrangement, and by the forging of slender links, but the attempt has not been very successful. The articles, now called chapters, remain separate and distinct studies. They are none the worse for that. Each is

interesting; each is useful. All deal with important problems; all are well written, and marked by wide knowledge, sound judgment, moderate and balanced opinion.

The question of nationality is treated in the first study: an interesting parallel is drawn between the condition of thirteenth century Italy, as depicted in Dante's *De Monarchia*, and modern Europe, as viewed by Treitschke; and it is shown how both the medieval dreamer and the latter-day realist looked to a German World-power as the way of escape from anarchy. International politics is the theme of Chapters II and III. The one, reviewing the recent books of Sir E. Satow and Dr. D. J. Hill, traces the development of diplomatic practice in modern times, and makes a particular investigation of diplomatic efforts to reunify Europe and prevent war. The other, reviewing the memoirs of several British diplomatists of the mid-nineteenth century, discusses the lines of British foreign policy during the years 1853–1871: some of the deep causes of the War of 1914 are laid bare. The more immediate causes of the conflict are considered in the fifth chapter under the heading, "The Logic of History: the Hohenzollern Traditions." The guilt of Germany is made abundantly clear; the point at issue is revealed as the question whether autocracy or democracy shall prevail in the world.

The next chapter is devoted to a comparison of the relative efficiency of the two forms of government in war time. Originally written in the autumn of 1915, it naturally presents a less favourable view of democracy as a belligerent than it would have done if it had been composed since the collapse of the Central Empires. A general estimate, in Chapter VII, of the place of small nations in the present world polity, leads up to a series of studies of the particular problems of the Netherlands, Poland, Ireland, the Balkan States, the Adriatic. In all these studies the present-day situation is examined in the revealing light of its historical antecedents. The last chapter treats of the project for a League of Nations as viewed from the standpoint of one who is conversant with the record of the achievements and failures of the Holy Alliance and the subsequent Concert of Europe.

TAGORE AS PHILOSOPHER.

The Philosophy of Rabindranath Tagore. By S. RADHAKRISHNAN. (8s. 6d. net. Macmillan.)

Admitting that Tagore is a poet, and not a philosopher, the author of this book sets before himself the task of converting "the vague suggestions of the poet into definite statements, supply the premises, draw out the conclusions, and give the setting where necessary." It will be seen that not much is left for Sir Rabindranath; yet, on the whole, Mr. Radhakrishnan justifies his claim that he is not "trying to find a definite meaning where there is none," nor "confusing his views with those of Sir Rabindranath." The truth is that the poet and his expositor are mystics both, and seem to understand one another; at any rate, the expositor claims in his preface that "the poet has been pleased to express his appreciation of this interpretation of his philosophy."

To the Western mind there are too many words in the exposition, too marked a tendency to say the same thing in slightly different forms; there is, in fact, a certain resemblance in style between the expositor and the poet, so far as we can judge by the prose quotations found in the text. This probably indicates a kinship of thought that ensures the accuracy of the interpretation. Truth to tell, the expositor is sometimes hard put to it to reconcile the attitude taken up by his author on various philosophical and political points, and one cannot but admire the ingenuity with which opposites are reconciled in higher unities. "Rabindranath is a nationalist, but not of the wrong type." In this sentence is gathered up the explanation of his apparently inconsistent views on this critical subject. Tagore is credited with all that is best in Christianity without forfeiting the acknowledged merits of Hinduism. In Tagore East and West meet, whatever Rudyard Kipling may say to the contrary. As a matter of fact, a good deal of the philosophy

(Continued on page 170.)

MACMILLAN'S NEW BOOKS.

ENGLISH LITERATURE FOR SECONDARY SCHOOLS, NEW VOLS.

Ellot. Silas Marner. Abridged for Schools by MAY COPSEY, B.A. Sewed. 1s. 6d.

Dickens. David Copperfield. Abridged and Edited for Schools by H. A. TREBLE, M.A. Illustrated. Sewed. 1s. 3d.

Hindu Tales from the Sanskrit. Translated by S. M. MITRA. Adapted by Mrs. ARTHUR BELL. Sewed. 1s. 6d.

Lay's Pupil's Class-book of English Composition. By ED. J. S. LAY, Author of "The Pupil's Class-books of Geography, History, The Vegetable Garden," &c. Book I (for Children of 9 to 10). Illustrated, 1s. 6d.

Wood's Oral and Written Exercises in English Composition. By ROBERT S. WOOD, Author of "Word-building and Composition Series," &c. Sewed. Primary, 6d. Junior, 7d. Intermediate, 8d. Senior 9d.

A Health Reader for Girls. By AGNES L. STENHOUSE and E. STENHOUSE, B.Sc. (Lond.), A.R.C.Sc. Fully Illustrated, 3s.

The Nursing Times:—"This book will be of immense help to teachers, as the subjects are treated from the point of view of a girl and her particular needs and opportunities."

The British Navy: The Navy Vigilant. By L. COPE CORNFORD. Illustrated, 2s.

The Parents' Review:—"This a book any boy or girl would love."

Physical Geography. With Questions. By B. C. WALLIS, B.Sc., F.R.G.S. Sewed. 1s. 6d.

The Journal of Education and School World:—"The volume furnishes a very complete course in the essential principles of physical geography. and will maintain the high reputation of the series to which it belongs."

which is here extracted from the poetry of Rabindranath may be attributed, without any unfairness, to Hegel. Page 88, for example, is pure Hegelianism. The general effect of reading the first two chapters of the book is that, as a philosopher, Sir Rabindranath is, like Miranda, "created of every creature's best." This does not suggest that the poet is a borrower, but merely that he has used the common stock of philosophy, and his expositor tries to make him original as a philosopher, whereas his excellence lies in his poetry. The chapter on "Poetry and Philosophy" is extremely interesting, and certainly gives help in understanding Tagore's place and influence in Indian thought. The same may be said of the chapters on his message to India and his message to the world. Readers of this *Journal* will be specially interested in Section IV of Chapter IV, in which the poet's views of education are set forth, and the general reader will benefit by the exposition of Tagore's attitude towards the political questions of India. The book is thoroughly well documented, but has no index.

EDUCATION.

A Study of Silent Minds. By K. E. KIRK.
(2s. 6d. Student Christian Movement.)

The sub-title of this book, "War Studies in Education," and the fact that its writer was formerly the London Secretary of the Student Christian Movement, will afford some preliminary clue to its contents and outlook. The treatment is confessedly sketchy, but what it lacks in completeness it amply atones for in suggestiveness and liveness, for it was wrought out on the Western Front, in close contact with those "silent minds" which the writer sees to be both a menace and a waste. Those of us who have anything to do with social reconstruction in its educational aspect will be all the better for having read these earnest and inspiring chapters.

Sex-Lore. A Primer on Courtship, Marriage, and Parenthood.
By Mrs. S. HERBERT. (7s. 6d. Black.)

In this volume Mrs. Herbert sets forth, in a readable because non-technical form, the chief facts regarding courtship, mating, marriage, and parenthood. The treatment is evolutionary, leading up from the reproductive arrangements that exist in the lowest forms of animal life to the spiritualized relationship that characterizes man and woman at their best. A large number of illustrations, borrowed from standard treatises, add to the value and interest of the book. The book will be useful to teachers and parents, but we emphatically do not agree that it is suitable for those "young people" for whom the writer appears to intend it. The main facts should be taught to "young people" as occasion arises, but without all this system and elaboration.

Echo Personalities. By F. WATTS. (4s. 6d. net. G. Allen.)

The aim of this small volume is more closely defined by its sub-title, "A short study of the contributions of abnormal psychology towards the solution of some of the problems of normal education." An introductory chapter on the scope of abnormal psychology is followed by a treatment of crowd psychology, psychopathology, the defective mind, and the supernormal mind—all with reference to their bearing on the education of the normal child. The writer, who is evidently something of a beginner in the literary art, has made an honest study of a subject of which much more will be heard in the future.

A Dream of Youth. By MARTIN BROWNE. With a Preface by Dr. J. N. FIGGIS. (3s. 6d. net. Longmans.)

"A Dream of Youth" is an Etonian's reply to Alec Waugh's estimate of the English public school, as set forth in "The Loom of Youth." We need hardly say that the defence makes much more cheerful reading than did the attack, and this is so not only because of the position taken up by Mr. Martin Browne, but also because of the big-boyish simplicity and directness of his manner of writing. As Dr. Figgis truly remarks, however, the worst compliment that one can pay to a stimulating book is to accept it *in toto*. We are not impressed by Mr. Browne's defence of the classics, and whether he is right in saying that history as a class subject does not call for much mental effort depends, we think, upon how history is taught and learned. But we are sure he is right in saying that the cult of the beautiful has been neglected in every grade of school, to the grave disadvantage of the scholars. He is right, too, in contending that upon the question of sex morality the appeal to honour and chivalry has far more effect upon boys than the appeal to mere safety. He modestly fears that his remarks about sermons and prayers savour of "cheek." We think the apology quite unnecessary. An occasional voice from the pews is as good a thing for the school chapel as for the ordinary church. Mr. Martin Browne's book is certainly well worth reading.

Introduction to the Scientific Study of Education.

By C. H. JUDD. (7s. 6d. net. Ginn.)

This book, from the active pen of Prof. Judd of Chicago, exemplifies a significant change which has for some years been going on in the mode of conceiving the problems of educational theory, and of expounding them to students in training colleges. The former mode consisted partly in writing or lecturing on systematic psychology with a constant eye to its pedagogical applications, and partly in presenting educational theory as it has arisen historically in great books and in the work of great teachers. Both these lines of approach have been abandoned or greatly modified in modern training courses. The new method is that of systematically conceiving and attacking the problems of education as they appear to the educationist (unhappy word!) rather than as they appear to the psychologist or historian, and calling in the assistance of psychology and history as and when such assistance is wanted. In principle this method was adopted in England before it was adopted in America, though American writers have been quicker to utilize the results of quantitative research in education. It is chiefly because those results are so freely employed in Prof. Judd's treatment that his book deserves the attention of English readers.

The Doctrines of the Great Educators. By Dr. R. R. RUSK.
(5s. net. Macmillan.)

Though Dr. Rusk's book bears a general resemblance to many others, English and American, it is sufficiently unlike any of them to justify its existence. It is not a history of education, but a collection of monographs on representative individual educators, from Plato to Montessori. Again, it does not follow the biographical line of treatment, as Quick and others have done, but gives in each case an exposition and criticism of doctrine, with abundant quotation from the original writings. Though biographical details can easily be overdone, we are not altogether convinced of Dr. Rusk's plan of omitting them entirely, because we think that a writer's real meaning can often be exhibited only by placing him in his historical setting. Still, Dr. Rusk's plan has its advantages, not the least of which are that he concentrates on essentials, and that, as is notably the case in the chapter on Froebel, he is led to establish frequent connexions with the doctrines of contemporary and other writers. The book is a careful and useful piece of work, by one who had obviously equipped himself duly for his task.

ENGLISH.

Tom Brown's School Days. Edited by H. C. BRADBY.

Illustrated by HUGH THOMSON. (3s. 9d. Ginn.)

There is no need to praise the illustrations, and, as for the book, it will, we hope, long remain *vivus per ora virum*. Mr. Bradby might have presented to us in full a modern Rugby, or possibly might have done more for us by way of notes, but the volume is delightful as it is. It ranks with "Eothen." Who shall estimate what these two books have accomplished? Let belittlers say what they will.

Macbeth. Edited by CHARLTON M. LEWIS. (2s. 6d. Yale University Press and Oxford University Press.)

This is part of the "Yale Shakespeare" and is a scholarly piece of work. The notes are very brief, but are open to view at the foot of the page; a few longer notes appear at the end of the book. The editor gets out of some difficulties by frankly confessing the play unhistorical. The look of this edition is that of a book that belongs to a well chosen library.

Areopagitica. With a Commentary by Sir RICHARD C. JEBB.
(3s. net. Cambridge University Press.)

The commentary here printed was made for a set of lectures in 1872. It is extremely interesting to have such notes from the translator of Theophrastus. Mr. Verity, in an unobtrusive way, has added an introduction and some supplementary work. Apart from the value of the notes themselves, this little book shows us the way that one scholar works in interpreting another.

Edward Young's Conjectures on Original Composition. Edited by EDITH J. MORLEY. (4s. 6d. net. University Press, Manchester.)

Most people know Young as the writer of "Night Thoughts" which is not on their shelves; and that he should have written so sprightly a piece of criticism as the "Conjectures" will be news: no English edition has seen the light for 150 years. The essay is outspoken enough, and should quicken criticism in the classroom; besides this it is full of good things, its English is admirable, and it well deserves its excellent form and introduction. It is not quite a matter of certainty that Young's diatribes against mimicry and imitation are very "far away" from us; the world has never done justice, for instance, to translators. Without translators the greater part of reading England would be an illiterate swamp, deprived of the Bible and of all ancient history and literature; and to call Virgil

(Continued on page 172.)

"AN IDEAL HISTORY BOOK."

Each chapter treats of such subjects as General Social Conditions, Costumes, Buildings, Modes of Life, Food, Travel, Fairs and Markets, Games, and Industrial Occupations.

A HISTORY OF EVERYDAY THINGS IN ENGLAND

Done in Two Parts, of which this is the first (1066-1499).

Written and Illustrated by

MARJORIE and C. H. B. QUENNELL.

Containing 200 pages, including 86 Illustrations specially drawn by the Authors and reproduced in line and half-tone, also 5 Colour Plates showing the development of Costume.

Price 8 6 net. Postage 6d. extra.

The Second Impression of this remarkable book is now ready.

The demand for it continues to be phenomenal, and early application should be made by those desiring to secure copies.

THE TIMES, dated September 26th, 1918, in a 130-line review, says:

"The goal of the authors of this very charming book is to introduce boys and girls to the life of successive ages, and so to enable them to study history, and indeed special branches of history, in such a way that the evolution of national life should appear a living thing. This we think they have achieved, and it is no mean achievement."

THE SPECTATOR, dated November 9th, 1918, in a 100-line review, says:

"A really delightful book for big children . . . interesting and charming from cover to cover."

THE MORNING POST, dated December 27th, 1918, in a 50-line review, says:

"The heart of John Richard Green . . . would have rejoiced at this history of everyday things and people in England which, though intended for boys and girls of public school age, ought to be read and studied by the parents of each one of them."

An illustrated prospectus will be sent post free on application.

GEOGRAPHY

THE VITAL SUBJECT

There is only one work which has been specially prepared to enable Teachers to meet the requirements of the "Revised Suggestions—Geography." In these times Geography has become one of the most vital subjects, and "The World We Live In" is the work which enables Teachers to reveal the wonder and romance of Geography to their scholars.

THE WORLD WE LIVE IN

interprets the Revised Suggestions with the accuracy and insight of the very men who inspired them. It presents to teachers of Geography a complete working outfit of knowledge and lessons that will carry them successfully through every requirement. The large number of diagrams gives plenty of blackboard illustrations, and the indexes are so clear that any subject can be turned up in a moment.

A great feature of this magnificent work is the volume of beautiful illustrations from original photographs of many lands which it contains.

NEW LESSONS ON GEOGRAPHY FREE TO TEACHERS AND EDUCATIONISTS

In order that you may know more about this wonderful work, the travellers and scientists who compiled it, what its pictures and articles are like, and how easily it may be yours, a beautiful illustrated booklet entitled "New Lessons in Geography," will be sent free of cost to all who mention "The Journal of Education and School World."

ADDRESS

J.E.E. 1919.

"original" is to misuse terms. The editor hopes she has reintroduced this essay; we share her hope.

Johnson and Goldsmith and their Poetry. By W. H. HUDSON. (1s. 6d. Harrap.)

Most of the volumes in the "Poetry and Life" series have received mention; the plan is excellent if there is enough quotation. In this little book eleven pieces are given, including, of course, the famous "Vanity of Human Wishes." The two writers, both tragic, are vividly brought before us: we might have had a reference to or even a photograph of the Johnson and Boswell statues in Lichfield. The bearish Doctor and the attractive Goldsmith cannot be too well known; they would themselves fascinate the young, even if they were not among the immortals.

A Rapid Survey of English Literature. By E. H. BLAKENEY. (2s. Blackie.)

Beginning with Chaucer, this survey puts the main facts very clearly, and adds short and suitable criticism. It is but an introduction. An illustrative passage, sometimes more than one, is added in each case. The plan is new.

Macaulay's Essay on William Pitt the Younger.
Edited by W. K. LEASK. (1s. 6d. Blackie.)

The editor maintains that Macaulay's three essays on the Pitts are invaluable for the history of England's politics from Walpole to the Reform Bill; and this edition with its full notes forms a pendant to the second essay on Chatham, also published by Messrs. Blackie. There is room for a new treatment of these famous essays, bringing them into living relation to present events; is any history "antiquated"?

Antony and Cleopatra. Edited by F. ALLEN. (2s. University Tutorial Press.)

The introduction to this edition is full, and all the help needed is given; even a veteran essayist admits that you cannot say what you would like about "Egypt," especially in schools. The editor has prefixed most useful introductions to each scene.

"Little Plays from Shakespeare."—*A Midsummer Night's Dream.* (1s.) *The Tempest.* (1s.) (Evans Bros.)

Although at first sight the teacher may be alarmed at seeing Shakespeare turned into prose, a further reading will probably lead to a trial of these books. The Shakespeare book published at 5s. gives fuller instructions as to the production of school plays for Shakespeare celebrations; and the drawing and directions in all three books would delight the author of "The Play Way." These are a few signs that teachers are welcoming some real introduction of parts of the great plays into the acting life of children—our true actors.

MATHEMATICS.

A First Year of Mathematics: Geometry and Algebra. By A. THORN. (3s. 6d. Glasgow: Gibson.)

This is the first of a set of volumes intended to supply a concise textbook for each year of an Intermediate School Course. It comprises an introductory section on practical geometry, followed by others on elementary theoretical geometry and on algebra, the latter pursuing the subject as far as the solution of simple equations. The part dealing with theoretical geometry does not go beyond the propositions relating to angles and the congruence of triangles. The basis of treatment is Euclidean, but the author has followed the sequence which is now very generally adopted, and he has catered for divergent tastes by occasionally providing several (in one case as many as four) different forms of proof. There is little in the book calling for criticism, but it may be remarked that the very first exercise in practical geometry seems to lend itself to misunderstanding. Pupils are asked to make a row of points in contact with one another and to measure the length of the row. What deduction are they expected to draw? There is an ample supply of examples to which answers are furnished.

Numerical Trigonometry. By P. ABBOTT. (5s. net. Longmans.)

The author tells us that as yet authorities are not agreed upon the extent of the field to be covered by the term Numerical Trigonometry, and he does not provide us with a clear-cut definition of the same. An examination of the book indicates that it implies little more than a knowledge of the geometrical significance of the trigonometrical functions and ability to apply this knowledge to the solution of all sorts of numerical problems in which the functions naturally occur. It of course also implies ability to handle tables of the functions. No use is made of even the simplest relations between the functions, and the addition theorem is quite outside the field. It is true that a good deal can be done with this limited equipment. Triangles can be solved, though the want of the half-angle formulae makes the solution of some of the cases rather tedious. Tables of squares and square-roots ought to be provided when the elementary methods of the book are employed. On the

September 1915—June 1918.

Bound up together. 2s. net. Postage, 8d. extra.

THE STUDENT'S GUIDE

Making the Most of One's Mind.

By JOHN ADAMS, M.A., B.Sc., LL.D.
(Professor of Education in University of London).

The Times Educational Supplement.—"Dr. Adams has written an admirable book, and a student may be regarded as fortunate who avails himself of its wisdom."

The Teacher's World.—"Prof. Adams combines in a rare and refreshing manner the wisdom of a philosopher with the acumen and practical skill of a man of affairs."

Fifth Impression. 4s. 6d. net. Postage, 5d.

EVERYMAN'S CHEMISTRY

The Chemist's point of view and his recent work told for the Layman.

By ELLWOOD HENDRICK.

The Times. in a two column review.—"We commend the volume heartily to a wide circle of readers."

Dr. J. L. PATON, of Manchester.—"I think the book ought to be distinctly useful in the attempt to familiarize our young boys, especially classical boys with some of the staple processes of the application of chemistry to production and the methods of scientific discovery. It is quite a live book."

With Illus. 8s. 6d. net. Postage, 6d. extra.

A SCHOOL CHEMISTRY

By W. H. RADCLIFFE, B.Sc., F.C.S.
(Chemistry Master of Tenison Schools).

Part I. 3s. Part II. 1s. 6d.

whole, we are inclined to think that the time spent in attacking such problems with primitive weapons might be better spent in learning the use of instruments better suited to the purpose.

Differential Equations. By H. BATEMAN. (16s. net. Longmans.)

This is an inspiring book, dealing in a fresh and vigorous manner with a subject in which the methods of treatment have tended to become stereotyped. It appeals above all to the student of mathematical physics, who will find it invaluable as a work of reference. A feature which at once distinguishes it from the majority of similar textbooks is the amount of attention paid to the arbitrary constants or functions which occur in the solutions of equations. Their determination gives rise very frequently to interesting questions which merit more than the perfunctory glance usually bestowed upon them. A section dealing with discontinuous solutions of linear equations with constant coefficients introduces the student to some recent researches of considerable importance. The chapters on total equations and on partials of the second order contain a few new results. Both the latter chapter and that on solutions by definite integrals will be found to contain adequate information regarding the most important equations which occur in the theories of sound, heat and electromagnetism. It is perhaps too difficult a book for students beginning the subjects, but more advanced students will find it of the greatest value.

PRIZE COMPETITIONS.

The prize for the February competition is awarded to "Ladon." *Proxime accessit* "Playshaw."

The winner of the Translation Prize for January is Mr. L. Moriarty, The Foss, Harrow-on-the-Hill.

Extract from Ernest Renan's letter, quoted in his "Souvenirs d'Enfance et de Jeunesse" :—

By "LADON."

I am very comfortable here. The tone of the house is excellent, equally removed from rusticity, coarse egoism, and pretentiousness. There is little intimacy, and the affections are rather starved; but the talk is good and high-toned, and rarely intermixed with com-

monplace or gossip. It is useless to look for cordiality between the directors and the pupils; that is a plant which rarely grows except in Brittany; but the directors have a certain broad-minded kindness which is pleasing, and which exactly suits the moral condition of the class of young people who come to them. Their rule is scarcely felt; the house goes of itself; it is not they that run it. The regulations, the customs, and the spirit of the house do everything; the men are passive; they are only there to maintain it. It is a machine that was well appointed two hundred years ago; it goes entirely of itself; the engineer has only to watch over it, or at the very most from time to time, to turn a screw or oil the springs. It is not as at St. Nicholas, for example, where the machine was never allowed to go alone; the engineer was always there, dashing right and left, putting his finger everywhere, breathless and hurried, because people did not dream that the best-appointed machine is that which requires least action on the part of the person who works it. The great advantage I find here is the extraordinary facilities provided for work, which has become for me a necessity and, in view of the state of my mind, a duty. The course on Moral Science is very well done; not so the course on Dogma; the professor is new, which fact, combined with the great, and to me special, importance of the treatises on Religion and the Church, would suit me very ill, if I did not find through these other gentlemen the means of making up the deficiency.

The chief difficulty in translating Renan's letter was to maintain throughout the light, crisp style of the original, and in this "Ladon" was more successful than anyone. Many candidates erred by using too many, or too heavy, words. *Affecterie* is "affectation," rather than "pretentiousness." *Ecrou* is strictly "nut," not "screw," which is *vis*. The last sentence of the letter is not well constructed, and Renan would probably have recast it if he had been writing for the press; it might be legitimate to translate: "which fact, considering the great, and to me special, importance." We greatly regret a misprint—*que l'on egard* for *en egard*. Three scripts had no *nom de guerre*.

We classify the 146 versions received as follows:—

Class I.—(a) Bugle, Ladon, Playshaw, Glenleigh, Jeanelsa,
(Continued on page 176.)

TEACHERS' CHRISTIAN UNION.

(Associated with the Y.M.C.A. and Y.W.C.A.)

Baby Shows and Day Nurseries.

The organizers of the Day Nurseries will profit greatly by the practical experience of the Baby Shows and Infant Welfare Centres. Methods which have been successful and foods which have proved their worth there, will be adopted by the new Nurseries.

At the most carefully judged Baby Shows and the most carefully supervised Centres for Infant Welfare,

ROBINSON'S "Patent" BARLEY

has been tested and has stood the test. Again and again has the First Prize Baby at the Baby Shows proved to have been fed on Robinson's "Patent" Barley.

Many a baby never has a fair start in life—born sickly, ailing and unable to be fed by Nature's method. Yet from these frail, suffering little bundles of mortality Robinson's "Patent" Barley has produced fine sturdy children. That is why in the Day Nurseries this famous food will be adopted and will have yet other opportunities of bringing health and happiness to our little growing citizens.

A Prize of Two Guineas is offered for the best translation of the following extract from Levis Mircepoix "Les Campagnes Ardentes":—

LES FAUCHEURS.

Ils ont repris la faux ceux qui ont quitté leur champ pour la guerre en laissant sur pied la moisson. Mais ce n'est plus dans le grand jour doré qu'ils ont couché les gerbes. Au fond de la tranchée, ils attendent la nuit pour sortir et leur mission est de débarrasser les glaciés des hautes herbes propices aux surprises de l'ennemi. Ils sortent. Engagés dans le réseau de fils de fer que l'obscurité complique, il leur faut, presque, à chaque pas, débrouiller sans bruit autour de leurs jambes un écheveau de piquants. Les voici sur le pré libre. Une patrouille s'avance devant eux pour les protéger, et déployée en demi-cercle, se tapit dans les herbes, l'arme prête, fouillant l'ombre du regard.

Les faucheurs, debout, sans armes, reprennent l'ancien geste pacifique. Aucune chanson ne les accompagne. Dans l'ombre, entre les lignes, leurs faux font un bruit de soie. En face, tout près, l'ennemi les a entendus. Car des balles les frôlent, sans interrompre le froissement rythmé des herbes. Une fusée lumineuse jaillit, inondant le glacié d'une clarté de fête aux lanternes. Les faucheurs se jettent à terre. Quelques-uns n'ont pas le temps et demeurent penchés, ne voulant pas qu'un mouvement de plus les trahisse. Tous les regards suivent anxieusement l'étoile aux reflets bleus de la fusée qui descend, infiniment lente...

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by the first post on March 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

INDUSTRIAL TRAINING FOR DEMOBILIZED WAR WORKERS.—To provide industrial training such as is required by demobilized members of H.M. forces and civilian war workers who are being set free from their war occupations, the Government have decided to set up a special department of the Ministry of Labour to deal entirely with questions of industrial training. The Ministry of Labour has appointed Mr. James Currie, C.M.G., formerly Director of the Munitions Training Section of the Labour Supply Department of the Ministry of Munitions, Controller of the new department. This department will, says the *Times*, not only administer various schemes for the vocational training of discharged soldiers and sailors, of civil war workers of either sex, and of women who are being discharged from auxiliary corps, but will, in due course, take over from the Ministry of Pensions the training of disabled men, with the exception of those who require medical supervision or training of a curative nature. Representatives of the trade unions and employers will be consulted in regard to the proposed systems of training. Arrangements are also being made to ensure the interest of Local Authorities in all training work.

These School and Teachers' Advertisements are continued from page 148.

STAMMERING

PERMANENTLY CURED.

RESIDENT AND DAILY PUPILS.

Sussex (Seaside).—Girls' Boarding and Day School. Established over 50 years and conducted by vendor 13 years. Gross receipts past year, £1,454; average gross receipts past three years, £1,200. Number of boarders about 22, paying from 45 guineas; number of day pupils, about 35, paying from 2 to 5 guineas per term. Rent of large detached house near sea, £150. The vendor would be willing to accept one term's fee on each pupil transferred by way of premium for goodwill. School and some household furniture at valuation. We have personally inspected this school, and believe it to be a very good opening, and to be had on favourable terms.—No. 6,012.

Lancashire (Seaside).—High-class Boarding and Day School for Girls and small Boys. Established 30 years and conducted by vendor 10 years. 17 boarders and 34 day pupils, paying about £500 per term. Net profits, £526. Rent of large house, £130. Price for goodwill by arrangement. School furniture, about £350; household furniture at valuation. The vendor states that she paid £650 for goodwill ten years ago on accounts examined by a well known chartered accountant; then there were only 27 pupils paying about £340 per term. There is also a Hostel for Ladies next door, which is also for sale.—No. 6,010.

Kent. For immediate disposal, Girls' Boarding and Day School.—Established over 25 years. Gross receipts past year about £900 to £1,200. Number of pupils 80, including several boarders. Terms for boarders, £30 to £42, and day pupils, £1. 1s. to £2. 12s. 6d. per term. Rent of large house held on lease expiring about 1920, £112. 10s. The vendor would accept one term's fees upon all pupils transferred by way of premium for goodwill. School, and possibly some household furniture at valuation. To effect a speedy sale the vendor is willing to accept £200 down upon taking possession, and the balance by instalments of £50 per term.—No. 6,021.

Kent (Seaside).—Boarding and Day School for Girls. Established over 50 years. Gross receipts past year £625. 10s. 3d. Number of boarders 6, paying £30 to £45 per annum each; 65 day pupils, paying from £1. 9s. to £3. 15s. per term, without extras. Extras £70 to £80 per term. Rent of detached house, held on 21 years' lease, £78. Price for goodwill £225, or the vendor would accept one term's fees on all pupils transferred. School and household furniture at valuation. The vendor states that, during the last three terms, numbers have increased rapidly, and that the gross receipts for the first two terms of this year were £462. 17s. 6d.—No. 6,003.

BOYS' SCHOOLS.

London, S.W.—High-class Preparatory School for Boys. Established about 50 years, and conducted by vendor with his late partner about 6 years. The vendor wishes to sell on account of his partner having just recently died. We understand there are 7 boarders at about £100 per annum, and 26 day pupils at about 10 guineas per term. Some are day boarders and pay more. Vendor states that in 1912 there were only 13 pupils. Gross receipts for 1917 about £1,800, and for 1918, £1,500; the reason for the slight drop in numbers last year was owing to the raids. Rent of very good premises, £130. Vendor states a great deal of money has been spent to make the accommodation, &c., all that could be desired. Price for goodwill, and excellent school furniture, about £2,000, or close offer.—No. 6,996.

London, S.W.—Boarding and Day School for Boys. Established many years and conducted by vendor 7 years. Gross receipts past year, £1,500. Net profits past year, £625. Number of boarders 13, paying £54 to £63 per annum; and 67 day pupils, paying £3. 3s. to £5. 5s. per term. Rent of large house, containing over 13 rooms and usual offices, £95. Price for goodwill and school furniture, £1,500. The vendor states that he wishes to dispose of his school owing to the ill-health of his wife. Part of purchase money may remain.—No. 6,995.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—
GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 and 13 Henrietta Street, Covent Garden, London, W.C.2.

Posts Vacant—continued.

THE GODOLPHIN SCHOOL, SALISBURY.

Miss DOUGLAS intends to retire from the position of HEAD MISTRESS in December, 1919. The Governors of the School invite applications for the post. Each application should contain particulars as to age, education, degree or its equivalent, and teaching experience, and should be accompanied by copies of not more than four testimonials together with the names of two persons to whom reference may be made. There should be three copies of each testimonial. The salary is £100 per annum, together with a capitation fee of £3 on each pupil. A separate residence will be provided for the Head Mistress, who will not take Boarders. The School holds 200 and has been quite full for a long time. The Head Mistress elect will be required to take up her duties in January, 1920. Applications should be addressed to the CLERK to the GOVERNORS, and should reach the School not later than March 14th. Selected Candidates will be asked to come to Salisbury for an interview between Friday, March 21st, and Monday, March 31st.

COUNTY OF CHESTER.

DIRECTOR OF EDUCATION.

Applications are invited for the appointment of DIRECTOR OF EDUCATION to the Cheshire Education Committee at a salary of £1,100 per annum. The person appointed will be required to give his whole time to the duties of the office.

Applications on forms to be obtained from the undersigned on receipt of stamped addressed envelope, accompanied by not more than three recent testimonials, must be received by me not later than the 14th day of March, next.

Canvassing either directly or indirectly will be regarded as a disqualification, and candidates will not be supplied with lists of the members of the Education Committee.

REGINALD POTTS,

Clerk to the Cheshire County Council.
County Offices,
Northgate Street, Chester.
14th February, 1919.

BRIDLINGTON HIGH SCHOOL

FOR GIRLS.—Required, for Summer Term, MISTRESS to teach Mathematics and some Science (Physics). Salary according to qualifications. Apply to HEAD MISTRESS.

Posts Vacant—continued.

KING EDWARD VI GRAMMAR SCHOOL, RETFORD, NOTTS.

The Governors invite applications for the post of HEAD MASTER, to commence duty September next. The School is an endowed Secondary School recognised by the Board of Education. The handsome modern buildings comprise Head Master's Residence (rent, rates, and taxes free), Garden and Games Field attached. Present pupils number over 190, of whom 46 are boarders.

Stipend £150 per annum, and a Capitation fee of £3 on pupils after first fifty, together with profits on boarders and an allowance towards lighting and service.

Candidates must not be over 45 years of age, and must be Graduates (preferably in honours) of a University in the United Kingdom.

Applications accompanied by five copies of not more than three recent testimonials, and stating age and qualifications, to reach the undersigned not later than Tuesday, 8th April, 1919.

Further particulars on request.

Canvassing will disqualify.

T. HERCY DENMAN,

Churchgate, Retford, Notts.
17th February, 1919.

COUNTY BOROUGH OF ROTHERHAM GRAMMAR SCHOOL.

Founded 1483.

The Governors invite applications for the post of HEAD MASTER, to commence duties in May next. The selected candidate must be a Graduate in Honours of one of the older Universities. Preference will be given to a candidate possessing a Honours degree in Mathematics or Science. Experience in a Public School or good Secondary School essential. Candidates must not be over 45 years of age. Commencing salary £650 per annum, with house. Accommodation is provided in the school for 220 boys.

Application stating full particulars of qualifications and experience, accompanied by copies of three recent testimonials, must be sent to the undersigned not later than 12th March, 1919, from whom any further particulars of the appointment may be obtained.

Canvassing directly or indirectly will disqualify a candidate.

JAS. A. MAIR,

Clerk to the Governors.
Education Offices, Rotherham.

Posts Vacant—continued.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE.

ASSISTANT MISTRESSES ASSISTANT MASTERS LADY MATRONS and HOUSEKEEPERS

seeking appointments in Public or Private Schools are invited to communicate with Truman and Knightley, Ltd., whose close and intimate relations with the leading schools place them in a unique position to find candidates suitable for openings in all branches of the teaching profession.

A special feature of this agency is the personal attention it gives in endeavouring to secure appointments suited to the applicant in every way.

The number of vacancies is now too large to permit of a satisfactory selection being inserted, and applicants are therefore invited to state their requirements fully, assured that they will, if desired, be treated in strictest confidence.

There is no registration fee and the commission charged to those for whom an appointment is secured is very moderate.

LADIES AND GENTLEMEN SEEKING PARTNERSHIPS IN OR TO TAKE OVER SCHOOLS OF THEIR OWN SHOULD COMMUNICATE PERSONALLY WITH MR. TRUMAN, WHO UNDERTAKES ALL NEGOTIATIONS CONNECTED WITH THE TRANSFER OF SCHOOLS, AND IS IN A POSITION TO OFFER ASSISTANCE AND SOUND ADVICE TO PURCHASERS, TO WHOM NO CHARGE IS MADE.

INTERVIEWS WILL BE ARRANGED BY APPOINTMENT.

ENGLISH

THE NEW HUDSON SHAKESPEARE

With Introduction and Notes by HENRY NORMAN HUDSON, LL.D. Edited and Revised by E. C. BLACK, Ph.D. Glasgow, with the co-operation of A. J. GEORGE, Litt.D. Each volume price **1s. 9d. net.**

An edition which combines scholarly and helpful editorial matter with attractive binding and type. Dr. Hudson is a recognized authority on Shakespeare and, as one would expect, his aids to the pupil are both sympathetic and suggestive, for he constantly aims at leading his readers to understand and appreciate Shakespeare as a man and as an artist, by bringing them into close touch with his manifold revelations of human life.

The volumes are artistically bound in blue flexible cloth, printed on good paper, contain in each case an authentic facsimile of an important page from a Quarto, Folio or Source Book, and are a convenient size for the pocket.

THE FOLLOWING VOLUMES ARE NOW READY:—

As You Like It
Coriolanus
Hamlet
Henry V
Julius Caesar

King John
King Lear
Macbeth
Merchant of Venice
Midsummer Night's Dream
Much Ado About Nothing

Richard II
Richard III
Romeo and Juliet
The Tempest
Twelfth Night

(Illustrated Prospectus post free on application.)

ENGLISH LITERATURE :

Its History and Significance for the Life of the English-Speaking World. By WM. J. LONG, Ph.D. 582 pp. Illustrated. **6s. 6d. net.**

The primary aim of the author of **English Literature** has been to create and encourage in every student the desire to read the best books. He has, therefore, throughout the volume laid emphasis upon the delights of literature; has treated books, not as mere instruments of research, but rather as instruments of enjoyment and inspiration; and, by making the study as attractive as possible, has sought to encourage the student to read widely for himself, to choose the best books, and to form his own judgment about "the things worthy to be remembered."

Prospectus post free on application.

Other books by the same author are:—

American Literature.

481 pages. Illustrated. **6s. 6d. net.**

English and American Literature.

557 pages. Illustrated. **7s. 6d. net.**

Outlines of English Literature.

351 pages. Illustrated. **5s. 6d. net.**

Outlines of American Literature.

557 pages. Illustrated. **4s. 6d. net.**

The STANDARD ENGLISH CLASSICS Series

Each of the volumes in the Standard English Classics Series contains excellent and appropriate editorial matter designed to give the reader that acquaintance with its author, his literary environment and his other works which will lead to an appreciation of the book in question and an understanding of the reason for the place which has been assigned to him in the history of literature.

The following is a selection of the volumes in this Series. A complete list may be obtained, post free, on application:—

Arnold: Sohrab and Rustum (with other Poems). **1s. 6d. net.**

Addison and Steele: Sir Roger de Coverley Papers. **1s. 6d. net.**

Burke: Speech on American Taxation. **1s. 6d. net.**

Burke: Speech on Conciliation with America. **1s. 9d. net.**

THE MOTHER TONGUE SERIES

Edited by J. W. ADAMSON and A. A. COCK.

Book One: Lessons in Speaking, Reading and Writing English. Complete, Illustrated, 2s. 3d. net. In Parts—Part I, 10d. net. Part II, 10d. net. Part III, 1s. net.

Book Two: The Practice of English. Complete, 3s. net. In three parts, each 1s. 4d. net.

(An Illustrated Prospectus of the Series will be sent post free on application.)

ORAL ENGLISH. By JOHN M. BREWER. 396 pages. **5s. 6d. net.**

An attempt to put the subject of Oral English upon a definite constructive basis. The book provides the student with brief directions, detailed and abundant exercises, and suggestive topics for use in both theory and practice for explaining, arguing and relating; and it lays constant emphasis upon the treatment of subject matter according to the best practice in written composition.

PRACTICAL ENGLISH GRAMMAR. By JOHN T. PRINCE. 256 pages. **3s. 6d. net.**

Presents in simple form the most important facts of correct English construction and provides abundant practice in their application. It gives the pupil a thorough knowledge of the relations of words in sentences, and of the principles and rules of construction and of inflections.

A Social History for Schools.

By STANLEY LEATHES, C.B., M.A.

Vol. I. **THE PEOPLE IN THE MAKING.**

From the Earliest Times to the Invention of Printing.

Vol. II. **THE PEOPLE IN ADVENTURE.**

To the French Revolution.

Each volume 320 pp., with over 100 Illustrations. **2s. 6d. net.**

"We hope that Mr. Leathes's work, besides delighting the child with its unfailing fertility of interest, may stimulate the teacher to make such methods his own. . . . The pictorial illustrations are many and well chosen."—*Times*.

HEINEMANN'S SCIENCE MANUALS.

INTRODUCTORY ELECTRICITY AND MAGNETISM.

By CARL W. HANSEL, B.Sc.

Over 300 Illustrations and Diagrams. Crown 8vo. **2s. 6d. net.**

A complete first course in electricity and magnetism based upon actual experiment, and embracing the recent changes and recommendations of the Board of Education's new syllabus.

A FIRST-YEAR COURSE IN GENERAL SCIENCE.

A Combined Text-book and Note-book.

By E. A. GARDINER, M.A., F.C.S.

2s. 6d. net.

This book presents an experimental course of general elementary science, and is an attempt to save time for the boy and labour for the teacher. It is divided into three sections:—I, Simple measurements. II, Some Common Apparatus and Instruments. III, Properties of Water and Air.

EXPERIMENTAL DOMESTIC SCIENCE.

By R. H. JONES, M.Sc., F.C.S.

With over 80 Illustrations and Diagrams. Crown 8vo.

2s. 6d. net.

This book provides a suggested course for Domestic Science Schools and Girls' Schools generally, based upon the view that Science can be directly and adequately taught in the Kitchen. The chief scientific principles in their application to domestic subjects are made clear by drawing upon everyday experience, and by the aid of kitchen utensils and commodities.

EXPERIMENTAL MENSURATION.

An Elementary Text-book of Inductive Geometry.

By H. S. REDGROVE, B.Sc. (Lond.), F.C.S.

The special feature of this book is the *combination* instead of the usual separation of Elementary Geometry, Trigonometry, and Mensuration. It is suitable for first and second year students of Technical Schools.

NOTE.—Mr. Heinemann will be glad to hear from teachers who have manuscripts on educational matters which they desire to publish.

The Only Authorised Books on the Montessori Method.

THE MONTESSORI METHOD.

By DOCTOR MARIA MONTESSORI.

Illustrated. **8s. 6d. net.**

In this book Dr. Montessori gives a clear explanation of her method and the principles upon which it is based.

DR. MONTESSORI'S OWN HAND-BOOK.

A Manual for Teachers and Parents.

3s. 6d. net.

As a supplement to her larger book on the Method, Dr. Montessori has produced this explanatory manual, which is invaluable for all teachers.

A New Montessori Book.

THE ADVANCED MONTESSORI METHOD.

By DR. MARIA MONTESSORI.

Vol. I. **SPONTANEOUS ACTIVITY IN EDUCATION.** **8s. 6d. net.**

Vol. II. **THE MONTESSORI MATERIAL FOR CHILDREN UP TO ELEVEN YEARS.** **12s. 6d. net.**

"A contribution to scientific pedagogy such as we have not had since the institution of the kindergarten eighty years ago."—*School Guardian*.

A COMMON-SENSE ALGEBRA.

By ASA BURNISTON, L.C.P. (Hons.).

1s. 6d. net. With Answers, **2s. net.**

Suitable for use in the Upper Classes of Elementary Schools, in Evening Schools, and in the Lower Forms of Secondary and Technical Schools. An extremely useful and enlightened introductory algebra.

ELEMENTARY BUSINESS TRAINING.

By V. H. ALLEMANDY.

Crown 8vo. **1s. 6d. net.**

This book is intended for use in the Upper Classes of Elementary Schools and in Commercial and Evening Classes.

THE BRITISH ISLES.

By A. B. ARCHER, M.A.

Illustrated. **2s. 6d. net.**

This is the first book in a new series, forming a Secondary School course in Geography, and is suitable for the Lower Middle Forms.

AVENTURES ET MERVEILLES.

A Simple French Reader for Junior Forms.

By C. V. CALVERT, B.A.

Crown 8vo. 300 pp. Illustrated. **2s. 6d. net.**

FRENCH TRANSLATION AND COMPOSITION.

By H. J. CHAYTOR, M.A., and E. RENAULT, B.A.

Crown 8vo. **2s. net.**

SCIENCE AND EDUCATION.

Edited, with an Introduction, by Sir RAY LANKESTER.

1s. 6d. net.

This volume contains seven lectures which were delivered by Whewell, Faraday, Latham, Daubeny, Tyndall, Paget, and Hodgson before the Royal Institution in 1854.

LONDON: WILLIAM HEINEMANN, 20-21 Bedford St., W.C.2.

DIRECTORY OF EDUCATIONAL ASSOCIATIONS.

[This List is Copyright. Reproduction is forbidden.]

THE object is stated only when this is not obvious from the title or not known by general repute. Then follow—(a) the membership total, (b) the yearly subscription, (c) the Society's organ, (d) the telegraphic address, (e) the telephone number, (f) the date and place of next annual meeting, (g) the secretary's name and office address.

At the end will be found the first instalment of a List of those Professional Societies holding a qualifying Entrance Examination for membership or fellowship.

We owe our best thanks to Secretaries for their promptitude in correcting slips.

Aberdeen County Schoolmasters' Association.

60. 1s. (f) November, Aberdeen. Mr. M. G. Gerrard, M.A., F.E.I.S., Bucksburn.

Academy, The British.

DRUMMOND LATHES

Are right at the Front.
The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable. DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable. The 3½ in. Lathe illustrated below is low in price, but capable of the highest class work

NORMAL

Correspondence College.

AS USUAL, PUPILS OF THE NORMAL CORRESPONDENCE COLLEGE PASS WITH

1st CLASS HONOURS.

2nd CLASS HONOURS.

3rd CLASS HONOURS.

THE ONLY CLASS, COLLEGE OR INSTITUTION that has obtained FIRST, SECOND and THIRD class HONOURS at the last FIVE OXFORD and CAMBRIDGE LOCALS, and the HIGHEST DISTINCTIONS at the College of Preceptors' Examinations, is the NORMAL CORRESPONDENCE COLLEGE.

FOR THE ONE FEE WE GUARANTEE TO GIVE TUITION UNTIL YOU PASS THE EXAMINATION

HIGHER FROEBEL.

Our pupils again have great cause for congratulation on their examination results, for over 90 per cent. have been successful. Send for Free Guide of 72 pages. (*Ask for the Froebel Guide.*)

LL.A.

A high percentage of Passes has been secured by the "Normal." Free Guide of 96 pages sent on application.

OXFORD AND CAMBRIDGE SENIOR LOCALS.

Pupils of the "Normal" pass with First, Second, and Third Class Honours, together with High Distinctions at each examination. For many years our pupils have gained Top places on the list, including 1st, 2nd, 5th, 6th, &c.

COLLEGE OF PRECEPTORS.

A pupil of the "Normal" HEADED THE LIST, together with SEVEN DISTINCTIONS. The "Normal" Money Prize of £50 and Silver Medal have been won by D. McKie.

On a previous occasion Top Place and Seven Distinctions were obtained by C. L. McKenzie, and Seven Distinctions by C. M. Cadman, both pupils of the "Normal."

A.C.P. and L.C.P.

Passes with Honours again obtained. The College of Preceptors' *First Prize*—the £10 prize for Education—has twice been won by a pupil of the "Normal," and at a recent examination the two most successful candidates were *both* pupils of the Normal Correspondence College.

MATRICULATION.

At each Matriculation examination, pupils of the "Normal" are most successful. First Class and other Passes were obtained at the last examination.

CERTIFICATE.

(Board of Education.)

Most remarkable successes obtained. "Normal" Money Prizes and Medals are won as usual.

PRELIMINARY CERTIFICATE.

(Board of Education.)

In all parts of the Kingdom pupils have passed. Pupils of the "Normal" have gained Seven Distinctions at both Preliminary Certificate and the College of Preceptors.

FREE. THE NORMAL GUIDE.

THE BUILDINGS REQUIRED FOR COMPULSORY CONTINUATION SCHOOLS.

THE Continuation School Buildings Report* is practical to a fault. So many large questions fall to be settled "ere mortar dab brick"—of curriculum, of numbers and staffing, and of organization, upon which in the case before us even expert opinion is still in solution. On all of them the Committee have had to make up their mind; but of that interesting process they permit us hardly a glimpse. Like the old lady in the story, they don't argue, they just tell us. For the initiate their report teems with debatable conclusions. The wayfaring man, if any such read it, will probably think that it has been written round a set of building by-laws, as some books are written round pictures.

The continuation school is envisaged as a separate institution, self-contained save for the assistance which the local technical school will give to the vocational work of the senior students. The proposal to break the educational period at twelve instead of fourteen is rejected, and for once a reason is given: "When a boy leaves the elementary school he turns a sharp corner in life, and his whole outlook widens and changes . . . From a schoolboy under the influence of his mother, he becomes a workman under the control of his employer . . . he will need an entirely different school environment—different buildings, a different curriculum, different teachers." Perhaps so, in the large towns, but in the small industrial centres, where everybody knows everybody else, the turning is not so sharp. Certainly, in a few such areas,

with (say) 5,000 inhabitants and about 800 children of school age and 120 continuation school students more or less, the plan of junior school to the age of twelve and senior school from twelve to eighteen, should be tried.

The Committee presumably are of Mr. Spurley Hey's opinion that the secondary school will have no dealings with the continuation school—at least, they suggest none. But, given a small secondary school with an agricultural bias in a purely agricultural district, the continuation-school student will surely be better taught if he be linked on to that school than if he be dealt with separately. The pupil teacher or student teacher is already there and his presence will diminish the disciplinary difficulties of the plan.

Not that the Committee are opposed to experiments. On the contrary, they emphasize the need for them and indeed welcome the opportunity which will be forced on the Local Authorities by the prevailing economic conditions of solving many of their problems in temporary buildings, because they will not for years be able to provide the new schools with permanent homes. The extent of the possible temporary accommodation has evidently been carefully studied. The rate-payer, and the Buildings Priority Department when it is set up, will both be relieved to learn that something like half the necessary school places can for the time be provided in technical schools and elementary schools occupied and disused, a proportion which can be raised to nearly three-quarters if business premises, large unoccupied houses, temporary army buildings, Y.M.C.A. huts, and the like are brought into service. In this connexion it is worth recalling that, shortly before the War, permanent provision had still to be made in Germany for more than 90 per cent. of her continuation school students.

The Committee's views on the four kinds of schools which will be required (each kind illustrated by a diagram); on the four types of curriculum (general, commercial, industrial, and domestic) and the proportion of students who will follow each; on the size of the classes, on the method of attendance, are all provocative of discussion.

The very definite conclusions to which they have come and the curly compelling way in which these are stated will help administrators and teachers to clear their minds and to concentrate on what is practicable. It is a needed service and a fruitful, though perhaps not the service they set out to render. Educational discussions are never-ending, they ought not to end, but from time to time they must crystallize in action. For the continuation school the time has arrived, and the Committee's report will help to precipitate the solution.

Conclusion and Summary.

Although in this Report we have made definite recommendations with regard to the character of continuation-school buildings, we are greatly impressed with the need for experiment and trial. We hope that Local Education Authorities will work out plans for themselves, and adapt them to meet the exact requirements of their own localities. We should expect these requirements to vary a good deal from area to area, and we trust that the variations will result in the erection of buildings of many different kinds. Freedom and initiative are necessary if the most suitable types of buildings are to be evolved in the future.

Our principal conclusions may be summarized as follows. We think that—

(a) Continuation-school buildings should contain suitable provision for social and recreative work as well as formal instruction.

(b) Abnormally large schools with accommodation for more than 2,000 students (400 at one time) should not be provided.

(c) Existing technical schools and schools of art should be relied upon for most of the accommodation required for technical instruction, though in the larger towns continuation-school buildings will often have to contain provision for giving instruction related to those industries, such as Engineering and Building, in which large numbers of students are employed.

(d) The immediate erection of very large numbers of new buildings is not desirable.

(e) The cost of new buildings at pre-war prices will be about £30 per school place, or £6 per scholar in attendance; and the

TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council of 29th February, 1912.)

THE

OFFICIAL LIST

OF

REGISTERED TEACHERS

IS MAINTAINED BY THE COUNCIL.

The Official List contains the names of all qualified teachers who have applied to become Registered, and have been accepted by the Council.

Unregistered Teachers should apply at once to

THE SECRETARY,
Teachers Registration Council, 47 Bedford Square,
London, W.C.1.

cost of equipment will be about £6 per school place, or £1. 4s. per student in attendance.

(f) It will be possible to utilize a great many existing buildings of brick or stone, and particularly technical schools, disused elementary schools, and occupied elementary schools, for the purposes of continuation schools.

(g) Temporary buildings of wood and iron will be available in considerable numbers, and in some cases will be capable of suitable adaptation as schools.

(h) Under existing conditions the joint use of buildings by elementary- and continuation-school students will not be satisfactory.

Concurrent Practical and Theoretical Geometry.

By W. J. POTTER, M.A. (Cantab.), Second Master, Roan School for Boys, Greenwich. Published in Three Parts.

Part I. Lines, angles, parallels, triangles, parallelograms. Contains the substance of Euclid, Book I, 1–34, with additions on Symmetry, Loci, Division of a Line, and Scale Drawing. Crown 8vo, 188 pp. Price 2s. net.

Part II. Circles, Inscribed and Circumscribed Polygons, Areas. Contains the substance of Euclid, Books III, 1–34, IV, 1–9, 13–15, I, 35–48, II, 1–14, with additions. Crown 8vo, 249 pp. Price 2s. 6d. net.

Part III. Similar Figures. Contains the substance of Euclid, Books VI, III, 35–37, IV, 10–12 and 16, with additions including a course of Numerical Trigonometry. Crown 8vo, 266 pp. Price 3s. net.

Part IV (in preparation). The Geometry of Space.

Answers to the numerical and graphical examples in Parts I to III. Price 1s. net.

A Complete Arithmetic.

By M. EASTWOOD, B.Sc., University Extension Lecturer, and formerly Lecturer on Education at the University of Liverpool, and J. LIGHTFOOT, D.Sc., M.A., Author of "Elementary and Intermediate Algebra," &c. Crown 8vo, 588 pp. Cloth, 5s. 6d. net.

This book has been specially written for the use of students preparing for those examinations in which the Theory of Arithmetic and Higher Arithmetic generally are subjects. The whole of the matter usually included in elementary and advanced Arithmetic is thoroughly revised. Many improved methods of computation are given. Short methods for rapid work, approximations, and the applications of graphs are fully treated.

An Elementary & Intermediate Algebra.

By J. LIGHTFOOT, D.Sc., M.A. Crown 8vo, 472 pp. Cloth. 4th Edition. With Answers. 5s. 6d. net.

Covers all the Algebra required for the Preliminary and Intermediate Examinations at the Universities. Concrete Examples are introduced from the first, and the powerful Remainder Theorem is introduced early. A special feature is the very clear and interesting treatment of **Graphic Methods**.

The Shining East.

By EMILY M. BURKE, L.L.A., Hornsey County School. Crown 8vo, cloth, 167 pp. Fully illustrated with Photographs and Maps. Price 1s. 6d. net.

This is the first of a new series of Ancient History Readers, and tells in simple language the story of Ancient Egypt, Assyria, Media and Persia, Tyre and Sidon, in short, of all those ancient peoples first made known to us by our Bible reading.

English Composition. A Systematic Course for School Use.

By HARRY PINE, with an Introduction by F. H. HAYWARD, D.Litt., M.A., B.Sc.

Teacher's Edition. Crown 8vo, cloth. Price 2s. net.

Pupil's Edition. In Two Parts. Price 8d. net, each.

The work is intended for class use, and aims at the direct teaching of composition on a definite plan by means of a series of original and progressive exercises.

A Book of Northern Heroes.

By A. J. DICKS, B.A., B.Sc. Principal of Walthamstow County High School. Crown 8vo, 162 pp. Price 1s. 6d. net.

A Book of Southern Heroes.

By A. J. DICKS, B.A., B.Sc. Uniform with the above. Crown 8vo, 181 pp. Price 1s. 6d. net.

Inorganic Chemistry.

By S. W. BURNELL, LL.B., B.Sc., and A. J. DICKS, B.A., B.Sc. Crown 8vo, cloth, 379 pp. Price 4s. 6d. net.

Recent developments of the science are adequately treated, volumetric and gravimetric exercises are freely introduced, and many illustrative calculations are fully explained in the text. Questions and further exercises are appended to each chapter.

Plant Study in School, Field, and Garden.

A textbook on Rural Science and Gardening. By J. S. BRIDGES, B.Sc., F.C.S., and A. J. DICKS, B.A., B.Sc., F.L.S., Head Master of Walthamstow County Secondary School. Crown 8vo, cloth, 432 pp. Price 4s. 6d. net.

This textbook is of an experimental nature and free from difficult terms and Latinisms. Practical exercises and a summary appear at the end of each chapter. The book is profusely illustrated with over 600 original drawings.

Elementary Science.

By J. H. NANCARROW, late Head Master of Kingston Public School of Science, and Lecturer at the Richmond School of Science. Crown 8vo, cloth, 354 pp. Price 4s. net.

Provides a thorough grounding in the elements of Physics, Mechanics, Heat, Light, Magnetism, Electricity, Chemistry, &c.

A
TEXT BOOK OF SEX EDUCATION

FOR

TEACHERS AND PARENTS

BY

WALTER M. GALLICHAN,

Author of "THE PSYCHOLOGY OF MARRIAGE."

MR. GALLICHAN, an expert who has made the scientific treatment of this difficult theme his own, here supplies a much wanted book. It is generally admitted that instruction in the sex problem must form a part of any sound educational curriculum in the future. The difficulty hitherto has been the lack of a book in which teachers and parents could find not only an accurate treatment of the subject itself, but practical suggestions as to methods of instruction for children, young persons, and adults. Mr. GALLICHAN has removed that difficulty, and the publishers are confident that this text book will meet with an appreciative reception.

A prominent educationist who read this manuscript says:—

"I regard the book as admirable in its delicacy and in its reverential treatment of a delicate problem. The author's model lessons for young children are not only effective for the purpose designed, but beautiful in presentation and phrasing."

GEOGRAPHY IN EDUCATION.

PHILIPS' HUMAN GEOGRAPHIES.

By JAMES FAIRGRIEVE, M.A.,
and ERNEST YOUNG, B.Sc.

Crown 8vo, with Coloured and Black and White Illustrations.

This series of elementary books is just what its name denotes—*human*. Everywhere the human note is predominant and the relation of man to his environment insisted upon. The books are not merely human in the sense that they treat of geography from the human point of view, but also because the kinds of human beings who live in different environments are fully described.

They are human, too, because they take account of the characteristics of the small human beings by whom they will be used. The books are written by men in actual touch with the problem of teaching young children, and they are written in a simple and interesting fashion. They are as logical as a proposition in geometry and almost as interesting as a fairy tale.

The series is distinctly progressive both in difficulty of language and of ideal. The first two volumes deal respectively with child and adult life in certain typical areas. Volumes III-VI cover the world on new and original lines.

The illustrations are new and novel and are specially drawn to suit the purpose of the lesson.

Book I.—CHILDREN FAR AWAY.

THE LIFE AND DOINGS OF CHILDREN

GEORGE PHILIP & SON, Ltd., 32 FLEET STREET, LONDON.

PHILIP, SON & NEPHEW, Ltd., South Castle Street, Liverpool.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: Admiral Sir DAVID BEATTY, G.C.B., G.C.V.O., D.S.O.

Principal and Vice-Chancellor: Sir J. ALFRED EWING, K.C.B., M.A., D.Sc., LL.D., F.R.S.

Secretary of the University: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Summer Session** extends from about the middle of April to the end of June; in Law, from May to July.

The **Winter Session** opens about the beginning of October and closes about the middle of March.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Degree of M.A.** (Honours and Ordinary), the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the combination of Arts, Science, Medical, or Special Studies; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Lit., D.Phil., and D.Sc. are conferred. The Degree of **Bachelor of Education** is conferred on candidates who have attended Courses and passed Examinations in Psychology and in Education (Theoretical and Practical). A Diploma in Education is also conferred. A Degree of **Bachelor of Commerce** (B.Com.) has been recently instituted, and Special Courses in Industrial Law and other kindred subjects are being provided. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. Temporary Regulations have been framed for a **Diploma** and a **Certificate in Forestry** for the behoof of Officers and men who have served in the War. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There is also a **Diploma in Psychiatry** (Dipl. Psych.). In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 44 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £21,485. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in all the Faculties, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary, 1s.; Arts Bursaries, 6d.; Medical Preliminary, 6d.; Degree papers: Arts, 1s.; Science, 1s.; Divinity, Law, Medicine, and Music, 6d. each.

RECENT PUBLICATIONS

HISTORY ETC.

Germany, 1815-1890 (3 vols). **Volume III, 1871-1890.** With two supplementary chapters. By Sir ADOLPHUS WILLIAM WARD, Litt.D., F.B.A., Master of Peterhouse. With 2 maps. Crown 8vo. 12s 6d net. Cambridge Historical Series

Previously published

Vol. I, 1815-1852 12s 6d net
Vol. II, 1852-1871 12s 6d net

"A book which gives a record of the most important events in German history, and as a handbook for students is probably superior to anything of the same kind that has been produced in Germany itself."—*The Times on Volume II.*

The Baronial Opposition to Edward II.

Its Character and Policy. A Study in Administrative History. By JAMES CONWAY DAVIES, Emmanuel College, Cambridge. Royal 8vo. 21s net

The Administrative records of the Chancery and Exchequer form the bulk of the material upon which this thesis, which was awarded the Thirlwall Prize in 1917, is based. The value of the material obtained is great, and has provided new light upon points of administrative interest as well as upon problems connected with the subject of the book. The Baronial Opposition to Edward II, as the author points out in his preface, was more than an opportunist outburst of oligarchical tendencies; it was a conflict of principles, contradictory and irreconcilable.

The War and Unity.

Being Lectures delivered at the Local Lectures Summer Meeting of the University of Cambridge, 1918. Edited by the Rev. D. H. S. CRANAGE, Litt.D. Crown 8vo. 6s net

CONTENTS: Unity between Christian Denominations, by Rev. V. H. Stanton, D.D.; Rev. Eric Milner-White, Rev. W. B. Selbie, and Very Rev. James Cooper, D.D.; Unity between Classes, by R. Rev. F. T. Woods, D.D., Bishop of Peterborough, and Rt Hon. J. R. Clynes, M.P.; Unity in the Empire, by F. J. Chamberlain; Unity between Nations, by Rev. J. H. B. Masterman.

MATHEMATICS AND PHYSICS

A Treatise on Plane Trigonometry.

By E. W. HOBSON, Sc.D., F.R.S., Sadleirian Professor of Pure Mathematics, and Fellow of Christ's College, Cambridge. Fourth edition. Demy 8vo. 12s 6d net

"There was a time when Professor Hobson's volume was the only British text-book in which the higher portions of the subject were adequately treated. Even now it has no serious rival, for although later works on higher analysis contain many chapters overlapping the ground covered by the latter half of this volume, we believe that 'Hobson' will continue to be the favourite textbook for those who wish to carry the subject beyond a merely elementary course."—*The Mathematical Gazette on the Third edition*

Matrices and Determinoids.

By C. E. CULLIS, M.A., Ph.D., Hardinge Professor of Higher Mathematics in the University of Calcutta. Volume II. Royal 8vo. 42s net

CONTENTS:—Compound Matrices; Relations between the Elements and Minor Determinants of a Matrix; Some Properties of Square Matrices; Ranks of Matrix Products and Matrix Factors; Equigradient Transformations of a Matrix whose Elements are Constants; Some Matrix Equations of the Second Degree; The Extravagances of Matrices and of Spacelets in Homogeneous Space; The Paratony and Orthotomy of Two Matrices and of Two Spacelets of Homogeneous Space.

The Theory of Electricity.

By G. H. LIVENS, M.A., Lecturer in Mathematics in the University of Sheffield. With 104 text figures. Large royal 8vo. 30s net

"Offered as a general text-book on the mathematical aspects of modern electrical theory, this work is a successful attempt to present the subject in a consistent form. . . . It may be said, without fear of contradiction, that this work is one of the most valuable of recent contributions to electrical literature."—*The Electrical Times*

CHEMISTRY

Recent Discoveries in Inorganic Chemistry.

By J. HART-SMITH, A.R.C.S., F.I.C. Demy 8vo. 4s 6d net.

An account of the more important discoveries in Inorganic Chemistry within the last fifteen years, so far as they concern the subject as usually taught in schools. The book is in no sense intended to be a textbook, but is rather to be regarded as a supplement to existing textbooks. The book contains particulars of all work coming within its scope that has been published up to the end of 1917.

ENGLISH

Cambridge Readings in Literature.

A Series of Anthologies from Homer to Masfield, illustrated with reproductions of pictures by great masters, from Botticelli to William Orpen. Edited by GEORGE SAMPSON. In five books. Crown 8vo. In three styles of binding, viz:—Cloth boards, uncut edges, with bookmarker; cloth limp; and cloth flush. Books I, II, III, 5s net, 4s net, and 3s 6d net, each respectively, according to binding. Books IV and V, 6s net, 5s net, and 4s net

"The passages of good literature which Mr Sampson has included make up volumes that to the adult reader will be delightful companions, and in the adult and the adolescent alike will stir the passion to read more and more."—*The Times*

The Story of Doctor Johnson.

Being an Introduction to Boswell's *Life*. By S. C. ROBERTS, M.A., sometime Scholar of Pembroke College, Cambridge. With a frontispiece and 15 plates. Crown 8vo. 4s 6d net

"The object of this little book is clearly expressed on the title-page. . . . Letting Boswell for the most part speak for himself—not in isolated tit-bits but in substantial paragraphs, I have endeavoured to present Dr Johnson in the various stages of his career and in the varied circle of his friends, in such a way as to attract those who have not already known the charm of that delicious nook of eighteenth-century society."—*Extract from the Preface*

Milton: Areopagitica.

With a Commentary by Sir RICHARD C. JEBB, and with Supplementary Material. Extra fcap 8vo. 3s net. Pitt Press Series

"Sir Richard Jebb's introduction, analysis, and notes—dealing especially with the numerous classical allusions—have the clarity and precision to be expected from the great scholar, and the new edition of the famous tractate may be warmly commended."—*The Spectator*

FRENCH

Translation from French.

By R. L. G. RITCHIE, M.A., Lecturer in French in the University of Edinburgh, and JAMES M. MOORE, M.A., Rector of the Madras College, St. Andrews. Demy 8vo. 6s 6d net

"A book which is clear, helpful, and a pleasure to read and work through. We say 'work through,' because the most valuable part is certainly that section which consists of models, or specimens of how fine translation should be carried out. It is in these passages, so carefully and delicately handled, that the science and art of the authors is most evident. . . . This, in short, is a very good book, and it should be bought."—*The Times*

A Manual of French Composition.

By the same Authors. Demy 8vo. 5s net

"The outstanding feature . . . is the Model Lessons. . . . These are of high merit, and deserve the closest attention. . . . The work is highly stimulating, and shows how the study of a modern language may give that mental discipline which was formerly supposed to be the province of the ancient classics."—*Modern Language Teaching*

Selections from Sainte-Beuve.

Edited by ARTHUR TILLEY, M.A., Fellow and Lecturer of King's College, Cambridge. Crown 8vo. 6s net

"The French text of nine of the brilliant critical studies by this most distinguished of modern French literary critics, with foot-notes and a thoroughly competent introduction."—*The Scotsman*

Regnard: Le Joueur.

Edited, with an introduction and notes, by ARTHUR TILLEY, M.A. Crown 8vo. 4s net

Lesage: Turcaret.

Comédie. Edited by A. HAMILTON THOMPSON, M.A., F.S.A. Crown 8vo. 6s net

Balzac: Le Colonel Chabert.

Edited by S. H. MOORE, M.A. Crown 8vo. 3s net. Cambridge Modern French Series

Jusserand: La Vie Nomade et les Routes

d'Angleterre au XIV^e Siècle. Edited by A.

WILSON-GREEN, M.A. With a frontispiece. Crown 8vo. 4s net. Cambridge Modern French Series

**THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
KINGSFIELD,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
The Marchioness of SALISBURY.
Major the Hon. WALDORF ASTOR, M.P.
The Rt. Hon. CHRISTOPHER ADDISON, M.P.
The Rt. Hon. Lord SHAW OF DUNFERMLINE.

Principal:

Miss H. C. GREENE.

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared as teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in **October**. Further particulars may be obtained on application to the SECRETARY.

**BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASIAC TEACHERS.**

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, KINGSFIELD, DARTFORD HEATH, KENT.

elect to EIGHT SCHOLARSHIPS varying in value
from £60 to £45 a year. Full particulars on applica-
tion to the HEAD MASTER.

SCHOLARSHIPS.

FARADAY HOUSE ELECTRICAL

ENGINEERING COLLEGE.—Examinations for SCHOLARSHIPS tenable in College
and Manufacturing Works are held annually in
April. For particulars apply to ACTING SECRETARY, 66 Southampton Row, W.C.1.

MALVERN COLLEGE.

TWELVE OR MORE

ENTRANCE SCHOLARSHIPS,
value £87 to £30, and some Exhibitions, value £25 to
£12, will be awarded by Examination to be held on
JUNE 3, 4, and 5, 1919.

Particulars of these and of certain valuable War
Exhibitions (awarded without examination), from the
HEAD MASTER or BURSAR.

ST. JOHN'S SCHOOL, LEATHER-

HEAD.—In addition to sons of living clergy
elected on the Free Foundation, Supplementary
Foundations (sons of living clergy only) are re-
ceived at the annual fee of 35 guineas. The School
is also open to sons of Clergy or Laymen paying full
fees, viz., 55 guineas per annum. Day-Boys 30
guineas per annum. Modern School buildings for
230 boarders and about 10 lay-boys. Boys prepared
for the Universities, Army and Civil Service Examinations, &c. Leaving Scholarships. Three Entrance
Scholarships awarded each year. Scholarship exam-
ination for 1919 on July 2nd: entries close the last
day of June. For Prospectus, &c., apply to the
HEAD MASTER, the Rev. F. A. DOWNES.

GIGGLESWICK SCHOOL.—On

June 4th and the following days an Examination
will be held for TWO QUATERCENTENARY
SCHOLARSHIPS (value £50 each). For particulars
apply to the BURSAR, Giggleswick School, Settle,
Yorkshire.

SCHOLARSHIPS.

The University Examination Postal Institution

has prepared many candidates successfully by
post for Entrance and other Scholarships—e.g.,

Christ Church; Wadham College;
Lady Margaret Hall; Somerville College;
Trinity Hall; Newnham College;
Royal Holloway College;
St. George's Hospital; Guy's Hospital;
the "Hugh Conway," University Coll., Bristol;
First Senior Moderatorship in Natural Science,
Dublin University.

Apply to the Principal, Mr. E. S. WEYMOUTH,
M.A., 17 Red Lion Sq., Holborn, London, W.C.1.

ALDENHAM SCHOOL, HERTS.

An Examination will be held on June 5th and 6th,
1919, for about SIX JUNIOR PLATT SCHOLARSHIPS
of £30, and two or three HOUSE of £20,
all tenable for three years, and open to boys under 15
on May 1st.

The Scholarships will be awarded for proficiency
in Classics, Mathematics, or Natural Science, or for
general all-round merit. Further particulars from—
Rev. A. H. COOKE, Sc.D., Head Master.

S. PETER'S SCHOOL, YORK.

AN Examination for Scholarships
and Exhibitions, varying from £50 to £15,
is held annually in May. General knowledge is
required in preference to specialization in one
subject. Exhibitions also awarded on the Common
Entrance Examinations.

Further details from—

S. M. TOYNE, M.A., Head Master.

SHERBORNE SCHOOL.

AN Examination for ENTRANCE
SCHOLARSHIPS, open to Boys under 14 and
over 12 years of age on June 1st, 1919, will be held on
June 10th and following days. Further information
can be obtained from the HEAD MASTER, School
House, Sherborne, Dorset.

BISHOP'S STORTFORD COLLEGE.

An Examination for SCHOLARSHIPS

will begin on
MONDAY, JUNE 30th.

For particulars apply to The HEAD MASTER.

LANCING COLLEGE

SCHOLARSHIPS.—ENTRANCE Scholarships will be offered for competition on Tuesday,
June 3rd, 1919, and following days. Candidates must be
over twelve years of age and under fourteen on June 1st.
(a) Six Scholarships (at least), Classical and
Modern, varying from 60 guineas to 15 guineas
per annum. (b) Two Choral Exhibitions of 25
guineas per annum, open to all boys who can sing
and read music. Full allowance in all cases will be
made for age. Candidates will be examined at
Lancing, unless further notice is given to the contrary.
For prospectus and all additional information,
apply to the Head Master, Rev. H. T. BOWLEY,
Lancing College, Shoreham, Sussex.

Gresham School, Holt.

ANNUAL
SCHOLARSHIPS EXAMINATION.
JUNE 4TH AND 5TH.

Entries received not later than 15th May.
Apply to THE HEAD MASTER.

ST. LEONARD'S SCHOOL, ST.

ANDREWS, FIFE.—TWO ENTRANCE
SCHOLARSHIPS of the annual value of £60, tenable
for four years at the above school, will be awarded
on the result of an Examination to be held in May.
Candidates must be between 13 and 15 on Sept. 15th,
1919. Preference will be given to the daughters of
professional men and of officers in H.M. Service.—
Applications for admission to the Examination
should be addressed to the HEAD MISTRESS.

UPPINGHAM SCHOOL

AN EXAMINATION for about
SEVEN OPEN SCHOLARSHIPS (value
£85-£30) and some House Exhibitions will be held
on June 3, 4, and 5, 1919.

Apply to THE HEAD MASTER, The School House,
Uppingham.

TONBRIDGE SCHOOL.—

SCHOLARSHIPS EXAMINATION on the
10th, 11th and 12th of June, 1919. One Scholarship of
£100 p.a., one of £80 p.a., and one of £40 p.a., and
not exceeding six Foundation Scholarships entitling
to exemption from payment of the Tuition Fee, will
be offered for competition. For particulars apply to
the SECRETARY to the Head Master, School House,
Tonbridge.

BRADFIELD COLLEGE.

AN EXAMINATION for
ENTRANCE SCHOLARSHIPS and EXHIBITIONS open to Boys under 15 on September
20th, 1918, will be held on May 27th and 28th, at
Bradfield.

The following will be offered:—

Three Scholarships of 90 Guineas.

One Exhibition of 60 Guineas.

One Exhibition of 50 Guineas.

Three to Six Exhibitions of 30 to 20 Guineas.

Entry Forms can be obtained from the HEAD
MASTER, Bradfield College, Berkshire.

CHELTENHAM COLLEGE SCHOLARSHIPS.

Examinations, May 27th, 28th, and 29th.

At least ten ENTRANCE SCHOLARSHIPS,
value £90 to £20, and some HOUSE MASTERS'
EXHIBITIONS will be offered to candidates who
are not already in the College, whether Senior or
Junior Department, including JAMES OF HEREFORD
SCHOLARSHIP, value £35 per annum, with
preference for boys born, educated or residing in
HEREFORDSHIRE. Also ARMY and OLD
CHELTENHAM. Some Nominations for SONS OF
THE CLERGY, value £30 per annum, may also be
given. Apply to the BURSAR, The College, Cheltenham.

PRIFYSCOL CYMRU. UNIVERSITY OF WALES.

Fee: £90 per annum (£10 per month), including tuition, board and lodging. (No extras except laundry).

The Annual HOLIDAY COURSE will be held from July 31st to August 27th.

Fee: £10, including tuition, board and lodging.

Application Form and further particulars can be obtained from the PRINCIPAL,

H. G. JUNKER,
Late Assistant Inspector of Physical Education under the Danish Board of Education, late Special Instructor and Inspector to the Education Committee of the County Council of the West Riding of Yorkshire, England.

TRAINING COLLEGE

FOR

Swedish Remedial Exercises and Massage.

Founder: F. BARRIE LAMBERT, M.B., B.S., D.P.H.

The training is modelled on that obtainable in Sweden, and includes preparation for the examinations of the Incorporated Society of Trained Masseuses, with practical experience at two London Hospitals.

For further particulars apply to the Directors, A. W. BROWN and E. M. HUMBLE, 36 Pembridge Villas, London, W.11. Tel.: PARK 3948.

UNIVERSITY COLLEGE, READING.

COURSE IN PHYSICAL TRAINING.
(Approved by the Board of Education.)

A One Year Course in Physical Training is held for Certificated Teachers (Women). The Course is intended to qualify Students to undertake the work of Physical Training in Schools (including Continuation Schools). A Prospectus of the Course and an Application Form may be obtained from the REGISTRAR, University College, Reading.

FRANCIS H. WRIGHT,
Registrar.

BURLINGTON CORRESPONDENCE COLLEGE.

Principal: Mr. J. CHARLESTON, B.A.
(Honours Oxon. and Lond.).

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and other Universities.

METHOD.—Thoroughly individual system, which ensures the closest attention to the needs of each student.

Rapid preparation for:—

Matriculation,

Intermediate Arts and B.A.,

Intermediate Science and B.Sc. (Theoretical Subjects only).

L.L.A. (St. Andrews),

College of Preceptors' Diploma.

SINGLE subjects may be taken if desired.

Address—THE SECRETARY,
Burlington Correspondence College,
14 Elsham Road, Kensington, W.14.

GEORGE GILL & SONS, Ltd.

THE OXFORD AND CAMBRIDGE EDITION.

Gospel of St. Mark. By the Rev. F. MARSHALL, M.A. Maps of Palestine, Sea of Galilee, Jerusalem, Environs of Jerusalem, Temple; Special Introduction.

Acts of the Apostles. Part I, Chapters i-xvi. By the Rev. F. MARSHALL, M.A. Specially prepared for Students taking the first part of the Book. Complete for the purpose, with Geographical and Biographical Notes, Maps, and Introduction.

As You Like It. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. 256 pp., Cr. 8vo.

Henry V. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Maps and Genealogical Tables. 256 pp., Cr. 8vo.

Richard II. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Illustrations and Genealogical Tables. 232 pp., Cr. 8vo.

— READERS. —

Gods and Heroes; or, Greek Fairy Tales. By P. C. SANDS, M.A., late Fellow of St. John's College, Cambridge. This is a reader intended for use in the Lower Forms of Schools. It gives a splendid initiation into the stories of ancient Greek mythology. Cr. 8vo, 128 pp., Cloth, 1s. 3d.

La Guerre, A.D. 1914. With notes on idiomatic phrases, by TAYLOR DYSON, M.A. A selection of leading articles on the Great War taken from the French and Belgian newspapers and arranged as a book for French Unprepared Translation for Middle and Upper Forms. Cr. 8vo, 128 pp., 1s. 3d.

La Guerre, Vol. II. A sequel to La Guerre, A.D. 1914. By TAYLOR DYSON, M.A. 1s. 3d.

ATLAS AND NOTES ON EUROPEAN HISTORY.

From the time of DIOCLETIAN to the outbreak of the GREAT WAR, 1914.

By HARTLEY FUDGE, M.A. 1s. 6d.

"The book consists of 36 Coloured Maps, not too full of names, and 104 pages of Notes, so called, which, however, practically form a précis of the history of Europe, from Diocletian to the Congress of Vienna. The author then carries forward history to the outbreak of the present War, by dealing separately, but still chronologically, and ab initio, with the history of Poland, France and Alsace-Lorraine, Prussia and German unity, the Dual Monarchy, Ottoman Empire, the Near East, and the like. The whole forms a small reference book useful for History teaching."

Journal of the A.M.A., Dec., 1918.

"In the body of the book there are more than thirty maps which, for the clearness of their lettering, we have very seldom seen excelled. Taken as a series they enable us to trace without confusion, through the centuries, the various stages in the political development of Europe."

Irish School Weekly.

ARITHMETIC BY DECIMALS.

By E. PULLING, B.A.

A simple, concise School Course, 9d. With Answers, 1s.

London: GEORGE GILL & SONS, Ltd., 13 Warwick Lane, E.C.4.

**The Heads of
Public and Private Schools
requiring
ASSISTANT MASTERS,
ASSISTANT MISTRESSES,
LADY MATRONS, and
HOUSEKEEPERS**

are invited to communicate with Truman and Knightley, Ltd.,
who are in a position to introduce

**University and other qualified English and Foreign teachers, and
Experienced Matrons and Housekeepers,**

whose credentials and qualifications have already been investigated.

Principals are thus relieved of the expense of advertising and
the trouble and annoyance of preliminary negotiations.

No charge is made to Principals for the service rendered.

Please write giving full particulars of requirements, when only those
Candidates will be introduced who appear suitable for the particular
positions vacant.

Communications, when desired, are treated in strict confidence.

The distinguishing feature of this Agency is its personal service, its
intimate acquaintance with the requirements of Principals, and its
personal knowledge of candidates introduced.

*A special and confidential department deals with the
TRANSFER OF SCHOOLS, PARTNERSHIPS, &c.
Communications on these subjects should be addressed
to Mr. Truman personally, with whom interviews should
be arranged by appointment.*

SELECTED :: EDUCATIONAL :: BOOKS.

Botany and Nature Study.

The Senior Botany. By FRANCIS CAVERS, D.Sc., Lecturer in Biology at Goldsmiths' College. Second Edition. **5s. 6d.**
A School course of Botany in which great stress is laid on outdoor and indoor observation and experiment.

Junior Botany. By FRANCIS CAVERS, D.Sc. **3s. 6d.**
Encourages observation and experiment on living plants, and the study of adaptation to environment.

Textbook of Botany. By J. M. LOWSON, M.A., B.Sc., F.L.S. **Fifth Edition, Revised and Enlarged. 3s. 6d.**
The standard of this book is that usually required for University Scholarships. The chief aims are simplicity and clearness of statement as regards both facts and principles.

A First Course in Plant and Animal Biology. By W. S. FURNEAUX. **2s. 9d.**
The object of this book is to provide young beginners with a course of Nature Study closely in touch with scientific methods.
The numerous illustrations are a special feature of this work.

Life Histories of Common Plants. By Dr. FRANCIS CAVERS. **4s.**
The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

Practical Botany. By FRANCIS CAVERS, D.Sc. **Second Edition. 5s. 6d.**
In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant substances.

School Gardening, with a Guide to Horticulture. By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. **3s. 6d.**
This book affords teachers sound guidance in the correct methods of teaching this subject and of organizing the classes.

Languages and History.

Junior English Grammar, with Parsing and Analysis. By A. M. WALMSLEY, M.A. **Second Edition. 2s.**
Based mainly on inductive methods. The recommendations of the Joint Committee on Grammatical Terminology have been completely adopted throughout.

The Matriculation English Course. By W. H. LOW, M.A., and JOHN BRIGGS, M.A. **Third Edition. 4s. 6d.**
A graduated course in English grammar, composition, and précis-writing.

An Anthology of English Verse. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. **3s. 6d.**
A selection of the best in all branches of English poetry except the dramatic, from Wyatt to Swinburne.

The Tutorial History of English Literature. By A. J. WYATT, M.A. **Third Edition, continued to the present time. 3s. 6d.**
Attention is devoted to the important aspects of the work of the chief English authors, while tracing the development of our literature.

A Social History of England. By FREDERICK BRADSHAW, D.Sc., M.A. **5s.**
An elementary account suitable for use in the upper forms in schools of the social and economic development of England.

Textbook of Geography. By G. C. FRY, M.Sc. **5s. 6d.**
For use in middle and upper forms. Stress is laid on the interconnexion of Physical, Political, and Economic Geography.

New Junior French Course. By G. A. ROBERTS, M.A. **3s. 6d.**
A year's course in Reading, Grammar, and Translation into French, with material for oral practice, for use in the junior and middle forms of schools.

Direct French Course. By H. J. CHAYTOR, M.A., Head Master of Plymouth College. Illustrated. **2s.** With Vocabulary, **2s. 9d.**
This book is designed for use by pupils of 12 or 13 years of age who are commencing the study of French.

Matriculation French Essays. By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A., Examiner in the University of London. **2s.**
A carefully graduated course in Free Composition in French.

Education.

Principles and Methods of Teaching. By JAMES WELTON, D.Lit., M.A., late Professor of Education in the University of Leeds. **Second Edition, Revised and Enlarged. 7s. 6d.**

In this work the treatment is theoretical in the sense of setting forth a consistent body of doctrine. But that the principles and methods here set forth are practical has been proved by the successful working of them in school.

Teaching: Its Nature and Varieties. By BENJAMIN DUMVILLE, M.A., F.C.P., late Master of Method and Lecturer on Education in the Islington Day Training College. **5s. 6d.**

An analysis of the processes of teaching as they occur in all subjects. The author examines the nature of the teaching itself, showing why certain methods should be employed.

Principles and Methods of Moral Training, with Special Reference to School Discipline. By JAMES WELTON, D.Lit., M.A., and F. G. BLANDFORD, M.A., Lecturer in Education in the Cambridge University Training College. **4s. 6d.**

This work treats of the general nature of good character—duty, virtue, conscience; of the school as a moral community in which good character is developed, &c.

Psychology, Experimental, in relation to Education, An Introduction to. By C. W. VALENTINE, D.Phil., M.A. **3s. 6d.**

An Introductory Course in Experimental Psychology as applied to Education, for the use of Teachers and Students in Training Colleges.

Textbook of Hygiene for Teachers. By R. A. LYSTER, M.D., B.Sc., D.P.H., Medical Officer of Health for Hampshire. **6s. 6d.**
Meets all the requirements of the Board of Education Syllabuses for Teachers in Training and for the Teachers' Certificate, Section M.

School Organization. By S. E. BRAY, M.A., Inspector of Schools to the London County Council. With a Chapter on "The Place of the Elementary School in a National System of Education," by Sir J. H. VOXALL. **Second Edition. 4s.**

Mathematics and Physics.

The School Arithmetic. By W. P. WORKMAN, M.A., B.Sc. With or without Answers. **Second Edition. 4s. 6d.**
An edition of *The Tutorial Arithmetic*, in which portions dealing with the higher theory and over-difficult problems are omitted.

Rural Arithmetic. By A. G. RUSTON, B.A., B.Sc., Science Tutor in the Department of Agriculture in the University of Leeds. **4s. 6d.**
Specially suitable for use in secondary rural schools working under the schemes of the Boards of Education and Agriculture.

School Algebra. By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **7s.**
A course of Algebra as far as the binomial theorem for positive integral indices, suitable for upper forms.

Preliminary Geometry. By F. ROSENBERG, M.A., B.Sc. With or without Answers. **2s. 9d.**
This is a textbook for young learners beginning the study of Geometry between the ages of 11 and 13. From the beginning the author insists on the learner's reasoning from first principles. The language used throughout is simple.

The School Magnetism and Electricity. By R. H. JUDE, D.Sc., M.A. **4s. 6d.**
For use in the upper forms of secondary schools. Based on Potential and Potential Gradient.

Junior Experimental Science. By W. M. HOOTON, M.A., M.Sc., F.I.C. **Second Edition. 3s. 6d.**
A two years' course in Physics and Chemistry, which students may commence when about thirteen years of age.

A First Course in Mathematics for Technical Students. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc. F.R.A.S. **2s.**
An easy course of Practical Mathematics, including Arithmetic, Mensuration, and Algebra.

A First Course in Engineering Science. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. **3s. 6d.**
Includes the elements of Applied Mechanics and Heat.

Complete Educational Catalogue, and Catalogue of Class Books for Secondary Schools, post free on application.

OCCASIONAL NOTES.

THE Board of Education apparently are still playing "the poor cat i' the adage" over the day continuation schools, "letting I dare not wait upon I would."

Are we to have
Day Continuation
Schools?

The President speaks here and writes there—as at Oxford the other day telling the University how all-pervasive the new movement will be; and as to the Mayor of Batley, commending the enterprise of those Local Authorities who are starting day continuation schools on a voluntary basis; but giving no indication of when he will follow them over the fence. Has he ever heard the story, we wonder, of the American orator whose glowing account of the good time coming was cut short by a hungry member of the crowd with the request, "You couldn't give it a date, mister"? It is an undignified performance this of underlining the indecision of one's own department! Were it not that the skill of the Administration and the resources of the Teaching Profession will be severely taxed in getting the new schools under weigh when the time arrives, we should be the less concerned that the game of "crabbing" the whole system, to which we alluded last month, should still be played so skilfully. The latest suggestion is that the hours of school attendance were fixed in relation to the hours of labour which then obtained. Eight hours in a fifty-two hour week, it is said, are a very different thing from eight hours in a week of forty-four or less, and quite important people profess themselves impressed by the argument. In what cloistral shade do these innocents dwell that they do not know that behind the demand for shorter hours is the driving fear of un-

employment? Is there no one who can tell the Prime Minister that here is one more sedative for unrestful labour, ready to his hand if he will but use it.

THE announcement of the appointed day (April 1) for Section 28 of the Education Act is one of those small occurrences which are pregnant with great consequences. The Board of Education must be furnished by July 1 with the name, address, and a short description of every school of which hitherto the State has had no cognizance. That is all. But it is the beginning of a census of the private schools of the country, and that must lead sooner rather than later to the determination of those which are efficient, and, for the matter of that—though later rather than sooner—to the termination of those which are not. Follow we the efficient schools: efficiency must confer a title to recognition, and the recognized will at least have the right to go about their lawful occasions unmolested, if they do not care to accept that modicum of public control which must be the price of a place in the national system. The road is as plain as the rhyme of "The House that Jack built"; and private-school masters who believe in themselves will not wait for July 1 before courting inspection by the Board of Education or by one of the Universities in order that their school's efficiency may be seen of men. Parents, unfortunately, are credulous folk in matters educational, but they will soon learn to distinguish between inspected and uninspected schools. Now that inspection is obtainable at the public expense, those schoolmasters who do not accept it will have no cause to complain when, in the general opinion, they are written off as inefficient.

SOME uncertainty seems to exist as to what should be done by existing teachers with reference to the Superannuation Act. Immediately after April 1, teachers who are in recognized service, and wish to withdraw from any present pension scheme so as to come under the Government scheme, should obtain from their school authorities—or, failing them, from the Board direct—two copies of a declaration of withdrawal. After filling up these copies, one should be sent to the Board of Education, and the other to the persons managing the old scheme, i.e. the school authorities. Any certificated teacher who does not wish to participate in the new Act should send notice to this effect to the Board of Education in the form given on page 4 of the "Rules and Orders." Secondly, all teachers in recognized service should write as soon as possible to the Board of Education giving a full account of all their previous service, and making their application for the recognition of service as qualifying service. Though there are no regulations on the point, it would also seem advisable that any applications for recognition of service as pensionable service, where any doubt exists, should be made at the same time. Finally, applications should be made to the Board for a form for the purpose of supplying evidence as to the state of health. This is solely in connexion with the death gratuity. Teachers over sixty on April 1 are not eligible for death gratuity, and those between fifty-five and sixty should make inquiries as to the medical examination compulsory in their case. At the time of writing no regulations have been made concerning the winding up of existing schemes. This matter is in the

hands of the Treasury, and there is some doubt as to the procedure with reference to existing endowment policies.

Educational Councils. MR. FISHER'S pilgrimage into the country after the introduction of his great Education Bill has led to an interesting experiment at York. At Mr. Fisher's meeting in that city, time did not allow of adequate discussion. A second meeting was therefore held, and out of that meeting has grown the idea and the realized fact of a permanent Educational Council. Each of the various educational bodies in the city is represented on the Council by one member, the Trades and Labour Council send eight, and there are various co-opted members known for their interest in educational questions. Meetings are held monthly, with the result that already some of the intricate problems raised by the Education Act have been, if not solved, at any rate honestly attacked, by persons able to bring wide varieties of information and judgment to the common stock. When one thinks of all the difficulties surrounding the establishment on sound lines of continuation schools, nursery schools, school camps, and so on, the wisdom of taking counsel is apparent. It is easy enough to "blunder in" and get something done; but there must be mutual understanding and agreement among possibly warring elements if what is done is to stand. We hope the example of York will be widely followed.

Oxford and Optional Greek. THE University of Oxford is to be congratulated on the decision arrived at that Greek is no longer to be a compulsory subject at Responsions, and, though the verdict was by no means unanimous, there is every reason to believe it will be endorsed by Convocation. The decision of Congregation may or may not be due to the memorial signed by Oxford head masters; but, as a matter of fact, the majority of the signatories are men who received a classical education, took a classical degree, and still believe in a classical education, but are unwilling that an obstacle shall remain in the path of a brilliant boy who knows no Greek. The older public schools will probably remain true to their traditions; but an increasing number of boys from modern secondary schools will win scholarships in mathematics, science, and modern languages, which will be augmented by grants from Local Education Authorities to enable the holders to attend a resident University, and it is highly desirable that they should come under the widening and refining influence which the older Universities alone are able to impart. Oxford does well to give way, and in doing so benefits herself as well as those to whom she makes the concession.

The School Medical Service. THE Bill for the establishment of a Ministry of Health has, by the Standing Committee of the House of Commons, been made to provide for the powers of the Board of Education, with respect to medical inspection and treatment, to be transferred to the new Ministry. This provision should not be allowed to pass without the most careful consideration. There is much to be said, no doubt, in favour of co-ordination—a word of great promise but small fulfilment—of the State services concerned with public health. We have viewed with some misgiving the gradual separation of the school medical service from the general administration of the Board of Edu-

cation, and we have scarcely been convinced that the policy of attempting to carry out the work under County Medical Officers of Health was wise. The service is of sufficient magnitude, and certainly of sufficient importance, to engage the wholtime attention and sympathy of a competent official directly under an Education Committee. But, at any rate, hitherto the Board of Education have been nominally responsible, and the Education authority in a position to control the local officials. By placing the schools under two Government departments difficulties may be created. The health and physical wellbeing of children cannot properly be separated from problems of mental development, school attendance, and employment. If the Ministry of Health are to deal effectually with one side of the child, it cannot ignore the other; and it may be doubted that it will be to the advantage of education for the schools to labour under dual departmental control.

School Attendance and Agriculture. THE Board of Education, it will be recognized, are justified in directing the attention of Local Education Authorities to the fact that the time has now come when exemptions from attendance at school, exceptionally allowed during the War for agricultural purposes, should be discontinued, and no further exemptions granted. In this view the Board of Agriculture concur. The shortage of labour on farms, and the necessity—at a certain period grave—of increasing food supplies, were good and sufficient reasons for releasing children of suitable age for seasonal labour on the land. But by-laws regulating school attendance have never been popular in rural districts, and the tendency to disregard them has been accentuated by the concessions made during the past three or four years. But the Board now rely upon Local Education Authorities "to resume the strict enforcement of the law," and farmers must therefore be prepared to forgo the advantages of what is usually a convenient and an invariably cheap source of casual labour. It is doubtful whether agricultural communities yet realize that before long no child will be available for employment until the end of the school term in which he attains the age of fourteen. When that fact is appreciated school-attendance by-laws will be less popular than ever.

Salaries of Teachers in Technical Institutions. THE most novel feature in the new L.C.C. salary scales for teachers in technical institutions is the valuable provision whereby selected members of the whole-time staffs of these institutions may be required, or allowed, to take six months' absence with pay not exceeding full salary, after each period of six years' satisfactory service, for the purpose of improving their industrial or commercial knowledge and experience. Arrangements of this type have been in operation for some years in certain American Universities with valuable results, but, so far as we know, this is the first time that an important English Education Authority has made definite provision along the lines just indicated. The salaries proposed in the new scale are similar to those paid in the L.C.C. secondary schools, whereas the technical institution teachers are definitely of opinion that, in view of their night teaching, their salaries should be appreciably higher than the secondary-school scales. The main features of the new scale are: (1) Full-time lecturers and assistant lecturers, with a

good honours degree or its equivalent, £150 to £400 for men (£450 in special cases) and £120 to £270 for women (£300 in special cases). (2) Heads of departments: men, £400 to £500, or £600 to £800; women, £300 to £400, or £400 to £600. (3) Part-time teachers, 15s. to 30s. per attendance. These scales, although a decided improvement upon present figures, are regarded by the teachers concerned as still too low, in view of the present high prices and the salaries offered by certain provincial Authorities. The general opinion in London technical schools is that the scale for qualified lecturers and assistant lecturers should be at least £200 to £500, and that of heads of departments £550 to £800.

THE Higher Education Committee of the London County Council have recommended a scheme whereby demobilized officers and men ordinarily resident in the London area may be trained as teachers. To get the benefit of the scheme, a man must be disabled, or, if not disabled, over twenty-five years of age. No definite educational qualification is laid down, but as the selection Committee is strong and representative, this important point will no doubt be well secured. There is to be "one year of organized academic study," ending with a corresponding internal examination, and one year of professional training as paid assistant under "organized supervision" in a selected elementary school, ending with a professional examination held by the Board. There is to be a short preliminary test in the schools to decide on general fitness, and from the commencement of this test until admission to a school for the year of professional training the student will receive a maintenance grant of £2 a week. During the year of training he will rank as a certificated teacher. We do not think that the normally trained teacher will object to the favourable terms offered to the disabled soldier desiring to enter the profession, provided the qualification for admission to the course is sufficiently high; but we would point out that for the success of the scheme a great deal depends upon the reality and thoroughness of the year of training. It must be definite *training*, not vaguely supervised practice.

THE industrial troubles that have succeeded so swiftly on the cessation of active hostilities may have their origin in the school. The children of the upper and lower classes in this country are educated in entirely different ways and by quite different types of teachers. Now in France, and to a less extent in the United States, there is only one type of school, to which all may go who are able to profit by the instruction. The fees are so moderate that they form no bar to the small shopkeeper sending his son to the same school as does the deputy or fashionable doctor. The consequence is that there is a greater unity in the State, to which the compulsory military training in France adds another reason. But in England the two classes of employers and employed rarely talk to one another frankly, and one of the consequences is that the mistress looks upon her maid as belonging to another race, and the master regards his workmen as so many "hands." Our public schools have come splendidly out of the War; but are we paying too high a price for their exclusiveness?

NOW that all civilization is represented at the Conference table at the Quai d'Orsay, is it not the moment for us to throw off our old insularity? The adoption of the metric system has been advocated for many years; the great argument against it has been that we should lose more trade with the United States than we should gain with other nations. But now it should not be impossible to persuade the States to make the change at the same time as we do. Then there is the question of decimal money; whether we take as our unit the pound sterling, the dollar, or the franc, we should save much time in a schoolboy's life, and more time in the life of every commercial man. Our soldiers have all become accustomed to the 24-hour clock; it simplifies every railway time-table, and could as easily be made compulsory in England as it has been in France and Italy. So could the Centigrade thermometer in place of our unscientific Fahrenheit. All these changes would need a few minutes' thought and a disturbance of old routine; but we ought not to be dissuaded from making them because some backwoodsmen tell us that our pound, our yard, and our ounce have made England what she is, and that, without them, the War would have been lost and our naval supremacy gone for ever.

Needed Reforms.

PERSONAL PARAGRAPHS.

THE news of Dr. Gow's resignation from the Head Master ship of Westminster School will be received with deep regret by all Old Westminsters. Dr. Gow was educated at King's College School and Trinity College, Cambridge. He was Third Classic and Chancellor's Medallist in 1875, and was elected a Fellow of Trinity in the following year. He obtained his degree of Litt.D. in 1885. Before his appointment to Westminster, in 1901, Dr. Gow was Head Master of the High School, Nottingham. He has presided at Westminster for eighteen years, and prosperity has been throughout the mark of his connexion with the school. Dr. Gow possesses the rare combination of gifted scholarship with business acumen and frank kindness of manner, and the record of his head mastership bears witness to its value. Versatile to an amazing degree, he has taught senior classes in almost every department of school work, and he has built up a great modern side in the ancient foundation. Beloved and esteemed by his pupils, who affectionately refer to him as "Jimmy," he will be remembered as the "war" Head Master who guided the school through great trouble, and preserved inviolate the great traditions of Westminster.

* * *

MR. R. TANNER, who has had "Grant's" house at Westminster for nearly thirty years, will retire at the same time as Dr. Gow, in July next. Mr. Tanner was educated at Sherborne and Pembroke College, Cambridge, obtaining a first-class in the Classical Tripos in 1880. His retirement will be regretted by generations of old pupils.

* * *

SIR OLIVER LODGE, who has been Principal of the University of Birmingham since its institution nineteen years ago, has announced his intention to retire at the end of the present session. He desires to devote the remainder of his life to the study of the æther of space, in both its physical and psychical relations. He is the last of the first triumvirate who were present at the birth of the University, and the Governors have accepted his resignation with regret, and placed on record that during nineteen years he has rendered

most distinguished service to the University, and given lustre to it by his great scientific attainments, broad sympathies, and independence of thought.

* * *

PROF. C. W. C. OMAN has been chosen as a candidate for the Oxford University by-election by Conservative and Unionist electors resident in Oxford. The vacancy has been caused by the election of Mr. R. E. Prothero to the peerage. Prof. Oman stands in the first rank of British scholars for knowledge of the political history of Europe, and of the geographical development of its modern States. He is keenly interested in education in all its forms, and a great advocate for the encouragement of research and the advancement of knowledge by every practicable measure.

* * *

LORD SYDENHAM has been elected President of the Association of Technical Institutions in succession to Sir Alfred Keogh. He is a worthy successor to a long list of famous presidents, including Lord Spencer, Lord Avebury, Sir John Wolfe-Barry, Sir John Gorst, Sir Horace Plunkett, and Sir Norman Lockyer.

* * *

DR. PEARCE, the new Bishop of Worcester, late Sub-Dean of Westminster, is the 106th of a distinguished line of prelates, including St. Dunstan, Julius de Medici, nephew of Pope Leo X, who himself became Pope Clement VII, Latimer the martyr, and John Gauden, the author of the "Eikon Basilike."

* * *

MRS. HOW MARTIN, formerly on the staff of Westfield College, has been elected to the Middlesex County Council for one of the Hendon electoral divisions. She is the first woman member on this Council. Mrs. Martin is an Associate of the Royal College of Science, and a B.Sc. London. She was a Parliamentary candidate at the recent election, but was not successful. During the last ten years she has taken an active interest in public affairs at Hendon, and she is an earnest advocate for the provision of further educational facilities for girls and women students and for the abolition of all sex inequalities.

* * *

MISS BROWN, Miss Wild, Mr. Blake, and Mr. Fleetwood, all members of the teaching profession, are among the successful candidates at Walthamstow in the election for the Essex County Council. A very interesting situation thus arises, Walthamstow being represented by four teacher candidates out of ten seats.

* * *

ALL members of the Assistant Mistresses' Association will bear with regret of the impending resignation of Miss K. Andrews from office. Formerly on the staff at Notting Hill High School—from which she retired in 1913, after over thirty years' service—Miss Andrews has been a member of the Association since its foundation in 1884. She held the position of Hon. Treasurer from 1898 to 1910, and has been General Secretary since 1911. With her intimate knowledge of the Association, and her unrivalled experience in educational matters, she has been able to do invaluable work for the Association and for assistant mistresses. For many years she has constantly represented the A.A.M. on other educational bodies, and loss of her presence and influence will be deeply felt.

* * *

THE REV. F. A. HIBBERT is resigning the Head Mastership of Denstone. A former pupil of Denstone himself, Mr. Hibbert returned to his old school after his residence at Cambridge, and once more returned as Head Master after a brief tenure of the same office at Worksop. He has thus been associated from early boyhood with schools of the Woodard Foundation. He has raised Denstone to a pitch of prosperity never before attained. He will find ample scope for his energy in the parish of Lilley (Herts) to which he has been presented by his College (St. John's) at Cambridge.

To Mr. Hibbert will succeed the Rev. A. R. MacGregor Grier, the Head Master of Bloxham, also a Denstonian from early boyhood, and he also having a record of continuous service with the Woodard Foundation. Formerly Head of Worksop, he has been at Bloxham since 1915.

* * *

THE REV. F. H. GEORGE, Head Master of King's College, Taunton, has been appointed Head Master of Bloxham School. Mr. George, who was educated at Great Yarmouth Grammar School and Jesus College, Cambridge, graduated with a Second Class in the Classical Tripos in 1893, and has had teaching experience at Berkhamsted and Hurstpierpoint.

* * *

THE death is announced of the Rev. William Chetwynd-Stapylton, Honorary Canon of Rochester. In his younger days the Canon was one of the keenest of oarsmen. He was a prominent wet-bob at Eton, and rowed bow in the eight against Westminster in 1842 and 1843. He was the senior survivor of the early Oxford and Cambridge boat races, in which he rowed for Oxford in 1845 and 1846, and he acted as Hon. Secretary of the University Boat Club from 1845 to 1847.

* * *

THE REV. E. C. PHYTHIAN-ADAMS, whose death is reported at Bexhill in his ninety-second year, was a distinguished Oxford scholar, with many interesting associations with notable men of the past century. He graduated from Worcester College in 1851, and during the following twelve years became Fellow, Dean, Lecturer in Divinity, and Chaplain of his College. He then took up coaching at St. Leonards, the Right Hon. Walter Long, M.P., being numbered among his many notable pupils. He was formerly a member of the Bexhill Urban District Council, and assisted the late Earl De La Warr in the development of Bexhill as a watering place. He was the author of the successful romance, "The Bow and the Sword."

ONLOOKER.

HOW AND WHERE TO HIRE GEOGRAPHICAL LANTERN SLIDES.

By L. BROOKS.

IT is pleasing to know that the use of the lantern in school teaching is spreading rapidly, especially, and naturally so, in the teaching of geography. Many teachers find much difficulty in obtaining suitable slides, and the present article aims at giving such information of the chief sources from which help in this direction may be obtained as will be of value to teachers of geography. It does not pretend to be complete. In fact, it is confined to those sources which the writer has himself used, and has found to be trustworthy.

1. *London County Council's Collection*.—These slides may be hired for use in any London elementary or secondary—aided or maintained—school. In certain cases the privilege may be extended to other London schools. There is no charge whatever, either for hire or carriage, not even for return carriage fees. All particulars of the scheme may be obtained of the Chief Officer of Stores, 31 Clerkenwell Close, E.C.1. Of a total collection exceeding 35,000 slides, about half may be described as being geographical. There is a great unevenness of value, but some sets are exceedingly good. During the War the lending scheme has been largely in abeyance owing to the impossibility of securing supplies of oxygen, which appears to be more extensively used in London schools than electricity. Advantage has been taken of the suspension of the scheme to overhaul the whole collection thoroughly, and to devise methods whereby the needs of individual schools may be met. No London geography teacher should neglect this source of supply.

2. *Royal Geographical Society*.—This society has prob-

ably the finest set of geographical slides in the world. The majority, having been prepared from photographs taken by explorers, are quite unique and are unobtainable elsewhere. Unfortunately, except in special circumstances, they can only be borrowed by Fellows, but so many geography teachers, both men and women, are now Fellows, that the existence of the collection is worth mentioning. The hiring fee is 2s. per dozen.

3. *The Diagram Company*, 27 Montagu Road, Wimbledon, S.W.19.—The slides of this Company, which was originally founded by two expert teachers of geography, are justly famous, especially the coloured relief maps and slides showing various geographical distributions. The Diagram Company has a greater collection of slides of this kind—as opposed to views—than any other firm or society. The whole collection is designed especially to meet the needs of modern geographical teaching. During the War the loan department has not been in operation, but will be revived in the near future. The hiring fee is 2d. per slide per week. A reduction is obtained by joining a subscription lending library. The making and the sale of slides are also prominent activities of the Company. A discount of 10 per cent. is allowed to all schools, and 15 per cent. to members of the Geographical Association.

4. *Newton & Co.*—This firm is perhaps the widest known of all. The hiring fee is 2s. per dozen for the first day (plus war advance of 3d. per dozen), but special terms are made for slides hired for educational purposes as well as to subscribers to the firm's lending library of slides. The collection is exceedingly large, and contains views of all parts of the world, as well as several features of particular interest. For example, for the teaching of physical geography there is a set selected and arranged by Mr. Mackinder for the Oxford University Extension Board, and another and larger set, arranged by a committee of London teachers. Besides these, the illustrations in Mr. Mackinder's well known book, "Britain and British Seas," can also be purchased as lantern slides. But the finest sets of geographical slides issued by Newton's are those arranged by the Visual Instruction Committee of the Colonial Office. These should be known by all teachers of geography. In connexion with these slides the following six complete courses of lectures have been issued, and can be purchased or hired at low prices:—(a) The United Kingdom (7 lectures by Mr. Mackinder); (b) India (8 lectures by Mr. Mackinder); (c) The Sea Route to the East (6 lectures by Prof. Sargent); (d) Australasia (8 lectures by Prof. Sargent); (e) Canada and Newfoundland (7 lectures by Prof. Sargent); (f) South Africa (7 lectures by Prof. Sargent). A set on the West Indies is in preparation. The fees for hiring or purchasing these slides can be had on application. The writer knows a secondary school in Liverpool whose Geography Master was so determined to possess, not merely to hire, some of these sets, that he gave a series of evening lectures illustrated by the slides, and purchased the latter by the money charged for the tickets of admission sold to parents and friends by his pupils. In this way he obtained the six sets, "The Sea Route to the East." It is an idea which other teachers would probably like to imitate. The slides illustrating a lecture must be hired as a whole, the fee being 10s. for the first evening. They may be obtained either partly coloured and partly plain, or wholly plain except the maps. Separate slides may be selected and purchased in batches of not less than two dozen. Newton & Co., 37 King Street, Covent Garden, W.C.2, are also the sole agents for the sale of the slides of the Diagram Company.

5. *Mr. E. G. Wood*, 2 Queen Street, Cheapside, E.C.4.—Mr. Wood has a large assortment of view slides of all parts of the world, as well as numerous sets showing the processes of different industries, and depicting scenes from the Great War. The hiring fees are more moderate than those of many firms, being 1s. per dozen (for first day) for slides in sets, and 1s. 6d. per dozen for a selection from various sets (both plus a war increase of 3d. per dozen from June 1918 until further notice). Slides are loaned at reduced rates by payment to a subscription scheme.

6. *Mr. H. Luscombe Toms*, 52 Queen Victoria Street,

E.C.1.—Mr. Toms's selection of geographical slides is not so extensive as those mentioned above, but it is representative, and contains slides of most of the regions of the world. The hiring fees are: for 50 slides in sets (for first day), 3s.; under or above 50 slides, 9d. per dozen; slides selected from sets, 1s. per dozen. These rates are still less to members of a subscription scheme.

7. *Flatters & Garnett, Ltd.*, 309 Oxford Road, Manchester.—This firm has a large general selection of slides, which is particularly strong on the zoological and biological side. There are very good sets illustrating British plant associations, and also some showing the cultivation and manufacture of cotton. There are also some excellent sets of geological maps, diagrams, sections, and photographs, including a large number showing typical British regions—e.g. mountain limestone areas. The ordinary hiring fees (1s. 6d. per dozen per evening) may be reduced by joining a subscription loan library.

8. *Miscellaneous Sources.*—There are many sources from which slides may be hired, usually without cost, for educational purposes. The following are a few examples; others are mentioned from time to time in the educational and other papers.

(a) *Railway Companies.*—The Midland, London, & North-Western, Great Central, North-Eastern, and other companies have sets of slides which can be hired by schools on application to the advertising departments of the respective lines. London teachers will find these slides included in the L.C.C. collection. Some colonial lines, e.g. Canadian Northern and Canadian Pacific, also hire slides through their London offices.

(b) *Colonial Governments.*—Occasionally colonial governments announce that slides may be hired, but no particulars of these are available at present.

(c) *Missionary Societies.*—Most missionary societies possess sets of slides which are either lent free or hired at a small charge. Teachers should write and find out particulars for themselves.

(d) *Newspapers.*—Frequently newspaper proprietors make announcements regarding the loan of slides, e.g. the *Daily Chronicle* used to lend a good set showing the production of a modern newspaper from forest to book-stall.

(e) *Propagandist Movements.*—Notices of slides lent by societies coming under this heading are constantly appearing in the daily and other papers, e.g. the Armenian question, the French claim to Alsace-Lorraine, &c.

After all, each school should try to get its own collection. Hiring slides is not only expensive, but annoying from the teacher's point of view, for what is needed is not to give lessons entirely composed of the exhibition of slides, but to aim at making provision so that the geography classroom can be rapidly darkened and a few carefully selected slides shown just where demanded by the lesson. When slides must be shown and returned immediately after exhibition they lose a great deal of their value. It is particularly annoying not to be able to correct any wrong impression, or to refer to a point which has not been appreciated, because the slides have been sent back; besides, it frequently occurs that the very slide or slides most needed are out of stock. It is surprising how soon quite a large and satisfactory collection can be got together in the course of time by making a point of buying a few each term. A small order easily passes the powers that be, but a large demand all at once tends to frighten. If the school possesses a camera club, the geography teacher would do well to seek its aid. Many geography teachers have found the help of such a club to be invaluable in increasing their collection.

Finally, it is frequently possible for a group of schools to co-operate. This has been done with success both in London and the provinces. Catalogues of slides possessed by each school entering the exchange are drawn up and circulated. It is almost always possible when slides are lent by one school to another to get at the same time a set in exchange. When it is possible to deliver by hand, there is little fear of breakages,

whilst the cost is negligible. Moreover, teachers who thus combine have the advantage of retaining slides at least for several days. It would be very useful if the various branches of the Geographical Association could arrange some such scheme of exchange either for the whole of the schools represented in the branch, or, if the area is too large, for smaller groups within the branch.

THE KING AT WESTMINSTER SCHOOL.

THE interest which their Majesties the King and Queen have always taken in education was shown by their visit on Shrove Tuesday to Westminster School to witness the ancient custom of "Tossing the Pancake." The origin of this curious custom is quite unknown, but it can hardly be later than Tudor times. Their Majesties, who were accompanied by the Prince of Wales and Prince Albert, were received by the Dean of Westminster and the Head Master (Dr. Gow) and conducted to the great schoolroom. Here were drawn up the Guard of Honour of the school O.T.C. which was inspected by the King, who, with characteristic thoughtfulness, had specially desired that owing to the inclement weather they should be under cover.

Their Majesties having taken up their position, the College Cook entered bearing the pancake preceded by the Beadle with the Silver Mace. The pancake was then "tossed" with the customary ceremonial over the bar—which stretches across the School at a height of some 20ft. from the ground—and fell just in front of the King and Queen. An excellent "greaze" (as it is called) ensued, which was watched with evident amusement and interest by their Majesties and the Princes. The winner, D. Moonan, a King's Scholar, was duly presented with the customary guinea by the Dean and also an additional guinea by the King. Afterwards the Masters and Head Boys were presented, and the King commanded an "early play" (whole holiday) to mark his visit.

Their Majesties then inspected Ashburnham House, the Library, and the Busby Library, and, after signing the Visitors' Book in the Head Master's house, drove away amid great enthusiasm, the boys escorting the carriages to the gates of Deans Yard.

As a Royal Foundation, Westminster has on many previous occasions been honoured with Royal Visits. Queen Elizabeth frequently visited the School. In 1564, for instance, she came to the Latin Play, and it is recorded that the authorities provided at a cost of xis. "one Plautus geuen to ye Queenes Majestie and fowre other unto the nobilitie" and also at the more modest cost of xiid. "butterd beere for ye children being horse" after their exertions. Charles II also visited the School and gave the chair which, it is interesting to note, was used by Queen Mary on Shrove Tuesday.

The present Head Master reminded the King of the story connected with Charles II's visit, for it was on this occasion that the great Dr. Busby kept his hat on in the Royal Presence, explaining that he could not allow his boys to think there was anyone greater than himself in his own School. King George at once smilingly suggested that Dr. Gow should follow Busby's example. It would appear, therefore, that Lord Kingsale, who claims the privilege of remaining covered in the King's presence, is likely to have a formidable rival in the Head Master of Westminster School.

BRITISH PSYCHOLOGICAL SOCIETY.—At a special general meeting of the British Psychological Society, held in London on February 19, it was unanimously resolved that persons interested (instead of, as heretofore, engaged) in the various branches of psychology shall be eligible for membership. It was also decided to institute three special sections of the Society, devoted to the educational, industrial, and medical aspects of psychology respectively. Further particulars may be obtained from the Hon. Secretary of the British Psychological Society, The Psychological Laboratory, University College, W.C.1.

TOPICS AND EVENTS.

TRAINING IN ENGINEERING.—The Engineering Training Organization was founded in October, 1917, at a meeting of engineers and educationists held at the Institution of Civil Engineers. The central organization is representative of the principal engineering institutions and educational associations throughout the country, with Messrs. A. E. Berriman, of the Daimler Company, and A. P. M. Fleming, of the British Westinghouse Company, as honorary organizers. Among its functions is the important one of advising parents and boys regarding the obtaining of a proper engineering training, and to provide a channel for the co-ordination of the educational interests of the various branches of engineering. There are many different ways of entering the engineering profession, and the value of the works apprenticeship depends in a great measure upon the system in vogue at the particular works selected. Schoolmasters who are not in close touch with the engineering profession, and who are often called upon to advise pupils finishing their secondary-school course, should communicate with the temporary office of the organization. Inquiries should be addressed to Mr. A. E. Berriman, Daimler Works, Coventry. The organization supports many reforms which will make for a better apprenticeship training, including apprentice-masters responsible for keeping proper records for each boy. This is most important, and those works which have adopted this plan offer a much more systematic training. The organization proposes to ascertain to what extent it could assist schools to secure engineering privileges for the more able boys by opening a register, and, if there is a demand for such assistance, engineering firms will be invited to enter their names on a corresponding list as an indication of their willingness to receive suitable boys as pupils. The organization has very strong backing, and should play a most important part when it gets fully settled down to work.

THE PROFESSIONAL WORKERS' FEDERATION.—This Federation, which was established in May last, now comprises a number of professional bodies, including the National Union of Teachers, Incorporated Association of Assistant Masters, Customs and Excise Federation, Second Division Clerks' Association, Association of Assistant Mistresses, and others, representing in all some 174,000 workers who have never before been organized jointly to protect their special interests as citizens. Experience has already shown the value of the Federation in providing a common meeting ground for these workers, and it has therefore been decided to open the organization to individual, professional, technical, or clerical workers by the formation of an Individual Members' Section. The Federation is directing particular attention to the question of the reform of the Income Tax, and is urging the Chancellor of the Exchequer to receive at an early date a deputation in support of its policy. It should be emphasized that the Federation is not attached to any political party, and that men and women of all shades of opinion join actively in its work. Requests for information should be addressed to the honorary secretary, Mr. F. H. Norman, 49 Bedford Street, W.C.2.

NATIONAL ASSOCIATION OF EDUCATION OFFICERS.—The Association of Education Officers has issued a memorandum summarizing their views of what the status and emoluments of chief education officers should be. The memorandum states that the work of the chief education officer is great in magnitude and far-reaching in character, and the new Education Act will substantially increase the work of the officer, both in quantity and importance. Education is the most important of all the activities entrusted to Local Government bodies, and the post of chief education officer can be filled satisfactorily only by persons of outstanding ability and suitable experience, the importance and responsibility of whose position should be recognized adequately. The chief education officer should be the responsible head of the whole educational and administrative organization, and his duties should comprise whatever may be necessary for the efficient fulfilment of his position. The minimum salary of a chief education officer devoting the whole of his time to the work in a non-county borough or urban district should, it is stated, not be less than £600. The minimum salary in a county borough should not be less than £800. The following minimum scale is suggested for the guidance of members and committees:—(a) Non-county boroughs and urban districts up to 50,000, £600 to £800; (b) non-county boroughs and urban districts above 50,000, and county boroughs between 50,000 and 100,000, £800 to £1,000; (c) county boroughs between 100,000 and 200,000, £1,000 to £1,250; (d) county boroughs between 200,000 and 400,000, £1,250 to £1,500; (e) county boroughs over 400,000, £1,500 to £2,000.

SCIENCE IN SCHOOL AND UNIVERSITY.—A meeting of the Yorkshire Natural Science Association was held in Bradford on February 22, to consider "The Relation between School and University Teaching of Science." The chair was taken by Dr. Wager. In opening the discussion Mr. Arthur Thornton, Bridlington, stated that there was no relation between school and University teaching of science; boys, well prepared in school both in the method and substance of science, were obliged to cover much the same ground during their first year's work at the University, with the result that their interest in science waned, and their power of work deteriorated. He considered that the institution by the Board of Education of Advanced Courses in schools for boys between the ages of sixteen and eighteen would increase this overlapping, and that the Universities should recognize that boys taking these courses were able to reach the standard required for intermediate examinations of modern Universities, and should organize their first year's work accordingly. Miss R. F. Shove, Leeds University, stated that girls often entered on University science courses when insufficiently prepared, and that this lack of preparation was apparent in their work in physics and chemistry. Girls proposing to take up a science course should remain at school for two years after matriculating. It would be well if Universities insisted on physics or chemistry being a compulsory subject in this examination for all intending science students. It was doubtful whether the advanced courses in science in girls' schools should reach Intermediate standard in all the subjects studied, for girls developed rapidly between the ages of sixteen and eighteen; pressure and overstrain were inadvisable, and the curriculum should also include humanistic study. Co-operation between Universities and schools would be rendered possible by the formation of Joint Consultative Committees, on which both bodies were represented. Dr. Dufton pointed out that there was a difference between school work done under supervision by small groups of pupils taking post-Matriculation Advanced Courses, and University methods of study, where large numbers of students were grouped together and less individual help given. He recommended the differential treatment of students, and the formation of groups for work of varying standards. Mr. Sadler, Bradford, discussed the relation between school and University teaching so far as physics was concerned; this was a subject which could only be handled effectively by a physics specialist, and of which the study should be accompanied by the study of mathematics; if boys attained Intermediate standard in physics at school they should be allowed to take advanced work during their first year at the University, and thus have two terms available for research work. At the end of the discussion a letter was read from Lt.-Col. Prof. A. Smithells, who put forward the view that some overlapping between school and University work was desirable, and that no school work could be a satisfactory substitute for the training in the elements of his subject given to a first year student by a University professor.

BRITISH SCIENTIFIC PRODUCTS EXHIBITION, 1919.—The King has graciously consented to act as President of the British Scientific Products Exhibition, 1919, which will be held at the Central Hall, Westminster, during the month of July. The President of the exhibition is the Marquess of Crewe, K.G., and Prof. R. A. Gregory is Chairman of the Organizing Committee. The British Science Guild has been encouraged to organize this exhibition by the success which attended that held at King's College last summer and the more recent exhibition at Manchester. Now that many inventions can be shown which could not be put before the public during the War, there is every prospect that this year's exhibition will be even more successful than its predecessors. The objects of the exhibition will be to illustrate recent progress in British science and invention, and to help the establishment and development of new British industries. The exhibition will include sections dealing with chemistry, metallurgy, physics, agriculture and foods, mechanical and electrical engineering, education, paper, and illustration, medicine and surgery, fuels, aircraft, and textiles.

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—The annual examinations for a Faraday Scholarship of fifty guineas per annum, tenable for two years in college and one year in manufacturing works, and for a Maxwell Scholarship of fifty guineas per annum tenable for one year in college and one year in works, will be held at Faraday House on April 15 to 17. The subjects of examination for the Faraday Scholarship are geometry, algebra, trigonometry, dynamics, statics and hydrostatics, geometrical and freehand drawing, chemistry and physics. For the Maxwell Scholarship, the subjects are mathematics, dynamics, statics and hydrostatics. Particulars can be obtained from the Secretary, Faraday House, Southampton Row, London, W.C.1.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

We recognize fully—have we not often said so?—the high aims and fair promise of the Education Act as a whole. But the more we examine the proposals in Section 10, read in conjunction with Sections 3 and 52, the less we like them. To introduce obligatory continuation the Board of Education is empowered to appoint a day, and the day may be the same for all areas or different "for different areas or parts of areas." Now, if the same day is to be appointed, why, in the name of Levana, should not the Legislature take the responsibility of appointing it? If different days are named, great difficulties will arise. The selfish and purblind opposition that showed itself in the House of Commons will be transferred to the local areas, and it will be strong in proportion to the charge that falls on the local purse. Foolish parents will seek migratorily some unproclaimed place for residence. And will not the "young persons" who have passed their fourteenth birthday in an unproclaimed area claim exemption in all areas, and higher wages than those who are bound to the school? Requesting again that the amendment of Section 10 in England should be considered with all due speed, we turn to the United States. Careful not to mislead our readers, we state frankly that the great American educational journals do not reveal any general demand for that obligatory continuation which we are asking Mr. Fisher to give England. It is the working men that grow clamorous. Thus, when the Convention of the Illinois State Federation of Labour met at Bloomington last December, its Committee on Education urged "the necessity of the enactment in Illinois of legislation establishing compulsory continuation schools for children after they leave school up to eighteen years of age, sessions aggregating not less than eight hours a week, to be held between 8 a.m. and 5 p.m., Saturdays excepted." (*American Teacher*, VIII, 1.) So Labour has pronounced itself as we have reported, in the State of New York; and it has spoken with the same voice in Pennsylvania and Wisconsin. To such utterances of Labour it is not wise to be deaf.

Like many other academies, Columbia University in 1918 felt the War in its coffers; the effect, we doubt not, will be transient. It is a sign of the times that the building called Deutsches Haus, which was given to the University in 1910 to serve as a centre for the study of German history and civilization, has been devoted—with the full consent of the donor—to work in connexion with the Americanization of adult aliens, and has now received the name, Columbia House. To encourage graduate studies the authorities contemplate a certain relaxation of old administrative rules; whilst a special Advisory Committee on Research will pass judgment on proposals for investigations that require financial support. We draw these facts from President Butler's Annual Report. It is statesmanlike in tone and full of wisdom, not to be distilled into a paragraph. We commend to particular attention the section in which the President deals with the University as a centre of international influence; for if the New World is to be founded on a common respect for law and justice, the principles of law and justice must be prominent among the things that all Universities are prepared to learn and teach. They are the same on the Rhine as on the Mississippi.

The War has not meant nothing but loss for the United States. President Butler, in the Report with which the preceding paragraph deals, indicates a gain. We beg our readers to weigh his words and to ask themselves whether we in England have reaped with quite the same result. "The War has brought back to the American people, and in some degree to the schools and colleges, the spirit of discipline which had been almost lost. The sentimental imitations of philosophy which have been spread out before teachers for a generation past have decried discipline as something unnatural, abhorrent, and to be avoided. With an innocence which is hardly pardonable so long after Rousseau lived and wrote, the natural longings and instincts of the infant have been exalted as the sole guide for his development of mind and character. The world of human experience was to be put aside and a world of the ego substituted for it. In the easy-going days of peace, when the nation was called upon for no particular effort, the evil efforts of this lackadaisical theory were not generally understood, and indeed might not have been fully apparent for years to come. The moment that the nation was called upon to make an effort, however, to adjust itself to a new and grave responsibility, and to summon all its powers in order to give adequate support to its ideals, then it appeared that discipline must be sought out in its hiding places and

quickly installed in a place of honour. The good effect was instantaneous, and those who were disciplined themselves realize the benefit of their new experience and are loath to surrender it."

Personal. Dr. Basil Lanneau Gildersleeve, Honorary Francis White Professor of Greek at Johns Hopkins University, who graduated at Princeton so long ago as 1849, contributes his "Brief Mention" (after silence for one number) to No. 156 of the *American Journal of Philology*. Henceforth the Johns Hopkins Press will take over from him responsibility for the publication of the *Journal*. Not to be matched easily is the record of his activity and service. Johns Hopkins University sustained a grievous loss, December 6, 1918, by the death, at the age of fifty-six, of Kirby Flower Smith, Professor of Latin in the University.—At Columbia University seven professors or assistant professors passed away last year. Dr. Herbert L. Osgood, Professor of History, was notable among them. Since Prof. George W. Botsford, the well known author of "A History of the Ancient World," died on December 13, 1917, the Department of History at Columbia has suffered two heavy blows in quick succession.

FRANCE.

Educational opinion in France is in a state of flux. Here you will find Vocationalism exalted; there an important body, the Société générale d'éducation et d'enseignement, sees the salvation of France in a return to the old classical learning. Only as to the secondary education of girls is there some crystallization of thought apparent. The extra-parliamentary Commission on the Education of Women, after being at work for two years, has reported. It is for the maintenance (without sanction) of the existing *diplôme* and the institution of a *baccalauréat* reserved for girls. These administrative details have little interest for us. We allow ourselves to join France, however, in mourning the death (on January 24) of M. Camille Sée, the founder of public secondary education for girls, who realized for the women of France a culture beyond any of which Fénelon dreamed. Joint sorrow attended also the death (February 16) of Miss Edith Williams, who founded the International Guild.

About Martial Toys. It has been proposed in England, and it has been proposed in France, to banish from the child's playroom martial toys—mimic guns, lead soldiers, and so forth. M. Emile Vuillermoz lately suggested in the *Temps* that Germany, in the treaty of peace, should undertake to close the factories at Nürnberg, where the pygmies and their artillery are produced. One workshop there has thrown, it is said, a hundred millions of lead soldiers on the markets of the world, and one woman in it can turn out a thousand of them in a day. The tiny warriors, with their distinctive accoutrements and insignia of rank, have been the joy of childhood for centuries; yet they should go if they make for bloodthirstiness. They do not in all cases. There are children who can live in a wild dream-world—in a land of faerie—with the most murderous properties, and keep their young souls unscathed. You will find, we think, that many a bishop, when a boy, has wallowed in piracy, without having ever been really tempted to hoist the Jolly Roger and sail for the Spanish Main. Children differ fundamentally, and no doctrine has worked so perniciously in education as that which represents them as all alike by nature, and various only by reason of environment and training.

COLOMBIA.

South America is drawing to itself the attention of the North; for the United States desires trade with it, and to supply it with the engineers and craftsmen by whom its resources may be developed. In high schools, in business schools, in colleges, Spanish, a key language to the gates of commerce, is being studied by young men and women. Colombia, the State adjacent to the Panama Canal, supplied the matter of an Exhibition held first at Newark, New Jersey, then at New York. An excellent pamphlet written to illumine the Exhibition tells us about the history, physical features, and domestic architecture of the country, and about education this:—"Most of the Colombian teachers in the past have been priests and nuns, for the Roman Catholic church is almost the only one in the country; but the Government has lately started normal schools to train teachers, also schools of farming, engineering, and mining. Many young Colombians have been sent to school in the United States, and more will follow them." With better education and good government the Land of the Gilded Man (*El Dorado*), who, as the early Spanish adventurers heard, washed the gold from his skin by plunging into a lake, may hope for a future as prosperous as its past was storied and sad.

INDIA.

The Report on Education in the Punjab during the year 1917-18 tells us that, as in recent years, the War hampered the rapid expansion of education which might otherwise have been counted upon. But there was no real set-back. The number of students in arts and professional colleges showed a steady increase, in secondary schools there was a slight gain, while the small falling off in pupils in primary schools was probably due as much to an unhealthy season in which plague and malaria were unusually prevalent as to the direct effects of the War. The Government in no way reduced its expenditure on education, the total charges for which, indeed, rose from 109 to 115 lakhs. Much discussion on education marked the year, and a Compulsory Education Bill was submitted to public criticism. The vernacular was adopted as the medium of instruction in the middle departments of Anglo-vernacular schools for all subjects except English.

Of its Girls. A slight increase in the number of schools for Indian girls was not accompanied by a corresponding increase in the attendance. Much remains to be done for the education of women in the Punjab. The only collegiate institution is the Kinnaird College, with four full-time and three half-time or occasional lecturers. Five-sixths of the girls under instruction in 1917-18 were at the primary stage, the teachers being as a rule not competent to carry them further. For the few (1,551) girls receiving secondary education there were well equipped schools taught by qualified teachers; but playgrounds were few and appliances for physical training rarely available. Indian girls need, no less than boys, an abundant supply of balls, skipping ropes, and swings.

QUEENSLAND.

The first rural school to be established in Queensland was opened January 30, 1917, at Nambour. By the end of the year it had drawn 337 pupils from the farming and fruit-growing districts about it, some of them conveyed by rail at the cost of the Education Department. The chief object of the school is to give some knowledge of those manual arts which are most useful in rural life. Queensland is looking at Vocationalism with interest and probing it, as only it can be probed serviceably, by practice.

NEW SOUTH WALES.

Nature Study. Education in New South Wales gives a front place to native study. The State has a "Bird Day." The Gould League of Bird Lovers, with branches in many communities and a desire to have them in all, seeks to protect the innoxious birds, to secure uniformity in the naming of birds, and to promote friendship and love towards them. A "Bird-Life Supplement" to the *Education Gazette* (xii, 10) publishes, amid much bright matter, the awards of prizes to children for essays on birds, along with specimens of the successful compositions. Kelly's Gully Public School, Warialda Railway, is conspicuous for the interest in nature study that an enthusiastic teacher has awakened. At Wanaaring School the teacher has planted lemon-scented gums, Moreton Bay figs, cedar and pepper trees, and twice a week during the dry season his pupils bring each two bottles of water to keep them alive. It is all well done. Nature is counsel and inspiration; we have got beyond those ancients who saw in plants only herbal remedies, in birds a means of divination.

HAWAII.

A Problem to be Solved. The sinister influence of "civilization" on primitive races is illustrated by the state of Hawaiian Islands. Two centuries ago they were inhabited by some 250,000 to 350,000 native Polynesians; at present the pure Hawaiian stock numbers about 23,000. The need of cheap labour for the sugar plantations and other agricultural enterprises caused the old Government to seek it from all quarters—from China, Japan, and Polynesia, from Portugal, Spain, Germany, Norway, and Porto Rico, and later from Russia and the Philippines—and the mixed immigrant folk have largely displaced the original inhabitants. Of the present school enrolment nearly 40 per cent. are Japanese. Since the annexation by the United States in 1898 the American element in the population has increased, but it consists only of a thin crust of capitalists, traders, and civil or military officials. To give unity to this conglomeration of races and Americanize the whole is the problem to be solved by the United States. A colony of Germans caused some trouble during the War.

VACANCIES IN SCHOOLS

IMPORTANT

So many Schools at present being full, some with long waiting lists, it will be an assistance to us, in dealing with the large number of inquiries daily received, if Principals likely to have vacancies for the next two terms will notify us as early as possible.

J. & J. PATON, Educational Agents,

143 CANNON STREET, LONDON, E.C.4. Telephone: Central 5053.

CORRESPONDENCE.

THE LEAGUE OF EMPIRE WAR MEMORIAL.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Since I wrote to you (page 103) about the League of the Empire's War Memorial scheme, which was to take the form of a Headquarters for oversea teachers in London, the scheme has received much encouragement, and there is now good hope that it may be realized before very long. The Colonies themselves are anxious to help. In view of the practical importance, both Imperial and educational, of the scheme, we are anxious to raise at least £50,000 as soon as possible. Teachers will be coming over to England every year, and this Headquarters will make all the difference to the comfort and success of their visit. I only trouble you with this further note, as it has become necessary to extend the scope of our scheme since I last wrote to you.—Believe me, yours very faithfully,

The College, Winchester.

March 4, 1919.

M. J. RENDALL.

THE INDIAN AS AN EXAMINEE.

To the Editors of *The Journal of Education and School World*.

SIRs,—It gives me great pleasure to see that Indian educational affairs are now and again noticed in the columns of the *Journal*. I hope you will allow me to offer the following remarks on a note which appeared under the above head in the November 1918 issue. It is true that out of some 30,000 who appear at entrance examinations of India, nearly 25,000 never attain the Bachelor's degree; but it cannot be argued correctly therefrom that in their case it is "a waste of strength, time, and money." The fact is that the so-called entrance examination, or what is accepted as equivalent to it and counted as such, serves a double purpose all over India—viz., a test for those who really seek entrance, and a school-final test for those who have no idea of going to the University, but merely require a certificate to enable them to join some one of the several technical institutions. The rest of the matriculants or school-leaving certificate-holders, take to some profession directly—Government service, employment under railway companies, clerical work in private firms, or schoolmastering. A proper remedy would be the bifurcation of high schools in India, schools that would prepare select pupils for the University, and a second class of schools that would prepare the majority for the technical college industries and the professions.

But I do not deny that the failure of some five thousand out of a ten thousand that prepare themselves for the B.A. degree is a woful phenomenon. In many cases accidents or events peculiar to the Indian social system account for it. Books and University studies do not always claim the entire devotion of the very many Indian undergraduates. It is a love for learning, often distracted by thoughts of the fair partner in life already chosen, the University terms being so many breaks in the continuity of the happy home life. I know many who are already fathers of boys and girls before they become Bachelors of Art or Science.

Due allowance being made for such conditions, as well as for the precious time wasted during frequent periods of inebriety, I concede many a struggler in University life is to be pitied for his ignorance of his own capabilities and for his vain attempts to exert himself beyond the limits of his intellectual strength and capacity.

Kavur, South India.

S. S. KRISHNASWAMY.

DIET IN SCHOOLS.

To the Editors of *The Journal of Education and School World*.

SIRs,—It is becoming increasingly recognized by educationists and parents that there is, as Mr. Fisher pointed out in introducing his original Bill, "a close connexion between educational and physical efficiency." Heads of schools and houses may, therefore, be glad to know that the National Food Reform Association as convener of the first Guildhall School Conference on Diet and Hygiene in Public Secondary and Private Schools is frequently consulted by schools anxious to adapt their dietary to present-day conditions and requirements. In this task it had the valuable aid of representatives of the Head Masters' Conference, Association of Head Mistresses, Incorporated Associations of Head Masters, Private Schools Association, Medical Officers of Schools Association, British Medical Association, Teachers' Guild, Parents' National Educational Union, Child Study Society, Association of University Women Teachers, Editors of Educational Journals, &c.

We should be happy to be of service to any of your readers.

Full particulars, with list of publications, comprising *Dietaries for Secondary Schools*, recently issued, "Our Children's Health at Home and at School," "Rearing an Imperial Race," "The Feeding of Children in War Time," "Aids to Fitness," "The Importance of Fat in Diet," "Why Worry about Sugar?" will be sent on application.—Yours etc.,

CHAS. E. HECHT,

Hon. Sec. Schools Committee.

National Food Reform Association,

Danes Inn House, 265 Strand, W.C.2.

BOOKS OF THE MONTH.

Education.

- Education and Social Movements, 1700-1850. By A. E. Dobbs. *Longmans*. Price 10s. 6d. net.

NISBET'S SELF-HELP GEOGRAPHY.

A NEW SERIES OF READERS ON ENTIRELY FRESH LINES.

By H. R. SWEETING, M.A.,

GEOGRAPHY MASTER AT MERCHANT TAYLORS' SCHOOL.

THE BRITISH ISLES.

For Standards III and IV.

With numerous Black and White Illustrations and Maps (Rainfall, Density of Population, &c.), 11 Coloured Plates and Maps. 224 pages. Price 2s. 3d.

This Book is designed as the first step in connecting various facts already acquired, mostly by observation and experience out of school.

THE WORLD.

For Standards V and upwards.

Containing numerous Black and White Pictures, 8 Coloured Plates and 15 Maps, illustrating the connection between Rainfall, Climatic Regions, and Crops. 224 pages. Price 2s. 4d.

This Book provides such facts as are necessary for understanding the different kinds of climate in the World, and the different crops which result, so that the habits and occupations of the inhabitants can be discovered and compared.

WORLD COMMUNICATIONS BY LAND, SEA, AND OCEAN.

For Standards V and upwards.

Containing 32 Maps and Diagrams, 32 Sepia Plates, and numerous Black and White Illustrations. Price 2s. 6d.

The third Book is intended to be the link between the knowledge of climates and regions of the World, and the actual everyday means of work and life in the present.

NISBET & Co., Ltd., 22 Berners Street, London, W.1.

PITMAN'S USEFUL BOOKS FOR TOWN SCHOOLS.

The Story of a Coal Mine.

By T. W. BERRY, F.C.S.

The introduction of some elementary instruction in mining is carried out in a readable manner. Each chapter contains simple questions as suggestive systematic exercises.

Cloth, 72 illustrations, 1s. 6d.

The Triumph of Man.

Being an Account of the Work of Man in the Twentieth Century.

Contains a simple account of wind, water, steam, and electricity and their applications; of iron and steel and their uses; &c.

Cloth, 130 illustrations, 2s. net.

Industrial Mathematics (Preliminary).

By G. W. STRINGFELLOW.

Provides a scheme for the mathematical teaching of the highest classes in primary schools situated in large industrial centres.

1s. net. With answers, 1s. 6d. net.

The Mathematics of Ventilation.

By F. BIRKS. The work is graduated in very easy stages and explanations given as clearly and concisely as possible. Over 600 examples, with answers.

3s. 6d. net.

By EMILY and MARIAN WALKER.

Dress Cutting & Making.

Helps the practical reader to produce any desired effect in the cut and fashion of a garment.

Cloth, 265 diagrams and illustrations. 5s. net.

Children's Garments.

Shows simple patterns and styles simplified as far as possible by the use of two or three paper patterns as foundations. Cloth, 141 diagrams and flat paper patterns. 5s. net.

English for Technical Students.

HARRAP'S LATEST PUBLICATIONS.

EDUCATING BY STORY-TELLING

Just Ready

Showing the Value of Story-telling as an Educational Tool for the Use of all Workers with Children. By KATHERINE DUNLAP CATHER. Size 8½ by 5½ inches. 448 pages. 7s. 6d. net.

An important feature of this most valuable book is the Bibliographies. Every section has its list of helpful sources; and there is an extensive list of the best books containing suitable material for the Story-teller. Most helpful of all is a unique bibliography of stories for eight years of a child's life, carefully graded and arranged under suitable months of each year.

AN IMPORTANT NEW BOOK.

THE HISTORY OF ARYAN RACE IN INDIA

From the Earliest Times to the Death of Akbar. By E. B. HAVELL. With Photogravure Frontispiece. 32 Full-page Plates and Maps, &c., and Full Index. 620 pages. Gilt top, 15s. net. Also in Half Morocco, 30s. net.

"An informing and illuminating work for which Students and Politicians should be profoundly grateful. Many illustrations of Indian Art and Architecture add to its value and interest."—*Yorkshire Post*.

AN INTRODUCTION TO THE HISTORY OF SCIENCE

By Dr. WALTER LIBBY, M.A. With Eight Illustrations. Size, 7½ by 5 in. 304 pages, 5s. net.

"Efficiently written, and free from excessive detail."—*Saturday Review*.

HARRAP'S INTRODUCTORY ALGEBRA

By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh. Crown 8vo, 180 pages, with Answers, 2s. net. Also without Answers, 1s. 9d. net.

From the *Principal of a Preparatory School*:—"Farquharson's *Algebra* is first-rate, and I shall put an order through in due course. I hope the book will have the success it deserves, for of the large number of elementary Algebras I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."

ENGLISH EXTRACTS AND EXERCISES

For Comparative Study and Training in Composition. By F. H. PRITCHARD, Lecturer in Literature at the Municipal Technical School, Devonport. Large Crown 8vo, 256 pages, 2s. 6d. net.

An admirable practice-book in English for lower and middle forms in secondary schools, and for upper classes in primary schools. The main idea is to centre all the week's work in English round a suitable extract. The exercises are abundant and in many cases novel in character. No essential point in elementary English is left untouched, and wherever possible opportunity is taken to stimulate interest in the author or extract under consideration.

A FIRST SPANISH COURSE

By Profs. E. C. HILLS and J. D. M. FORD. With exercises and vocabularies. Crown 8vo, 340 pages, 4s. 6d. net. Key for Teachers only, 5s. 3d. net.

This easier course is designed for much younger pupils than the Author's previous work.

"A prominent feature is the RESUMEN GRAMATICAL in Spanish at the end of each lesson."—*The Journal of Education*.

LIBRO DE LECTURA PARA PRINCIPIANTES

Edited by E. MAURER, Reading School. With Vocabulary and Exercises. Small crown 8vo, limp, 160 pages, 2s. net.

A SCHOOL GRAMMAR OF PRESENT-DAY FRENCH

By J. E. MANSION. Crown 8vo, 256 pages, 3s. 6d. net. *Just ready*

A new reference French grammar for middle and senior forms, special features of which are the stress laid on fundamental principles, and careful differentiation between the normal constructions of the language and those which belong to emotional, colloquial, or literary expression.

HARRAP'S BILINGUAL SERIES

General Editor—J. E. MANSION

Each Book price 1s. 6d. net

Modern Language Readers for the student who wishes to enlarge his vocabulary through reading. Each book consists of a carefully selected story, or other suitable material, with text and translation on opposite pages and a few Notes. The Series will include books in all the principal languages.

THROUGH THE SUN IN AN AIRSHIP.

By Professor JOHN MASTIN, M.A., Sc.D., Ph.D.

"Mr. Mastin manages to make his tale absorbing at all points, the interest never slackens, his imagination never fails. The suggestions opened out are numerous and appalling. Some of the discussions are on very deep subjects, and, though they do not lead us far, and are hardly as illuminating as the utterances of poets, they are put down soberly and in a convincing manner, which shows that the author takes his work seriously. His scientific knowledge aids him well in his task, and has enabled him to produce a fine novel as attractive to boys as to grown up people."—*Daily Telegraph*.

DUSTLESS

and HYGIENIC ROOMS

In SCHOOLS, LABORATORIES, &c.
USE The British Made and Owned

Odourless, or Powerful Germicidal

FLORIGENE

(A Regd. Name suggested by FLOOR-HYGIENE)

EARLY in the **EASTER VACATION**

for best results.

"Florigene" has been continuously used for many years on Wood, Concrete, and Stone floors of every description, also on Linoleum and Cork Matting in Government and Municipal Buildings, and in all kinds of Schools, and other Institutions in the United Kingdom and Colonies.

"Florigene" costs little, is easily applied by unskilled, and saves time and labour.

It is **IMPORTANT TO NOTE** that

ONE APPLICATION of "Florigene" **ALLAYS** THE DUST and DIRT for **2 to 12 months**, according to traffic, not only during each sweeping (without Sprinkling of any kind) but also throughout all the intervening periods — which is of greater hygienic importance.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any other method

Not sticky—the ordinary daily dry sweeping alone required—Scrubbing being optional.

"Florigene" is strongly recommended by Medical and other expert authorities.

A Head School Mistress writes:—

"I am glad to have the opportunity of recommending 'FLORIGENE.' We have used it regularly on both wood and linoleum, and found its effects most beneficial, both in laying the dust and preserving the surface."

(Repeat orders since received.)

A Grammar School Head Master writes:—

"We have used your 'FLORIGENE' for several years in this School, and we have found it excellent in keeping down dust, which is now never to be seen anywhere. I believe the health of this School has been better since. The air is certainly more pleasant to breathe when movements are going on; there is also a great saving of labour in cleaning."

(Repeat orders since received.)

Numerous other Testimonials can be produced.

GEOGRAPHY IN EDUCATION.

PHILIPS' HUMAN GEOGRAPHIES.

By JAMES FAIRGRIEVE, M.A.,
and ERNEST YOUNG, B.Sc.

Crown 8vo, with Coloured and Black and White Illustrations.

This series of elementary books is just what its name denotes—*human*. Everywhere the human note is predominant and the relation of man to his environment insisted upon. The books are not merely human in the sense that they treat of geography from the human point of view, but also because the kinds of human beings who live in different environments are fully described.

They are human, too, because they take account of the characteristics of the small human beings by whom they will be used. The books are written by men in actual touch with the problem of teaching young children, and they are written in a simple and interesting fashion. They are as logical as a proposition in geometry and almost as interesting as a fairy tale.

The series is distinctly progressive both in difficulty of language and of ideal. The first two volumes deal respectively with child and adult life in certain typical areas. Volumes III-VI cover the world on new and original lines.

The illustrations are new and novel and are specially drawn to suit the purpose of the lesson.

CONTINUATION SCHOOLS IN INDUSTRIAL AREAS.—In a paper on "Technical Education and its Relation to the Engineering Industry," which Principal Schofield, of Loughborough, recently delivered to the Association of Technical Institutions, he described what should be the character of the part-time education in continuation schools in industrial areas. Speaking primarily as an engineer, he said it is most essential that in such areas a fair proportion of this time should be given to vocational studies. A certain amount of physical culture would be desirable, and also broad studies in the elements of citizenship; but the larger period should be definitely given to studies which have a direct bearing upon the daily work of the student. It is admitted that for those engaged upon the lower types of industrial work one of the chief difficulties will be that of discipline and maintenance of continued interest. This part of the problem would be largely solved by giving to such students actual craft training upon productive work. There is tremendous scope in this direction for the day continuation course in the technical school, so as to give a young person a broader outlook upon actual work than is possible under the restricted conditions of the commercial firm. All kinds of working difficulties may be explained, reasons for and against methods illustrated, and experiments upon actual working conditions tried. If such a course as this were adopted there is much to be said in favour of the suggestion that the part-time attendance should be arranged so as to take place during part of one week in every three.

DRUMMOND LATHES

Are right at the Front.
The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable. DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable. The 3½ in. Lathe illustrated below is low in price, but capable of the highest class work.

As supplied by the British Admiralty.

EDUCATIONAL GARDENING.

BY

ROBERT HOGG, F.R.H.S.

Instructor of Gardening to the Derbyshire Education Committee.

Extract from Introduction by Mr. ARTHUR HOUGH.

This book will prove a reliable guide to teachers, scholars, and others interested in Horticulture who wish to possess a good knowledge of facts and principles necessary for successful practical work, whether connected with school and cottage gardens or allotments. The writer, whose practical experience extends over many years, deals with sound methods of cultivation in a concise and clear manner. The pursuit of Horticulture acts beneficially on body and mind, it readily lends itself to experiment, sharpens the power of observation, anticipates results, and is a wholesome and profitable recreation.

General Editor—W. H. D. ROUSE, Litt.D., Head Master of the Perse Grammar School, Cambridge. **8d. net and 10d. net.**

A series for use in the first two or three years of the study of Latin. Each volume has a short introduction dealing with the author's life and works, his style, and the subject of the book. All vowels long by nature are marked; thus the pupil, learning the quantity as an essential part of the word and pronouncing aright from the first, will not make mistakes when later he comes to use an unmarked text.

THE WIND CURRENTS OF THE WORLD.

IN considering the subject of world wind circulation, a method not infrequently adopted in the past has been to regard the actual winds which are found in the different regions as being composed of two separate systems. The first consists of an ideal "planetary system," which might be supposed to exist if the earth were covered entirely with water, and the disturbing effect introduced by land and sea masses with their different degrees of solar heating were absent. The second system, which is combined with the above, consists of the disturbing winds which are introduced by the unequal heating of land and sea. The most outstanding example of the first class is formed by the great trade-wind currents, which blow in tropical regions from North-east in the northern hemisphere, and from South-east in the southern; while of the second class the winds known as monsoons stand out as pre-eminent examples. For conveying a clear but rather rough picture of world circulation this method has something to recommend it; but a closer study of the wind currents as actually revealed by observation has led of late to any such method of attempted separation into two systems becoming somewhat discredited. No endeavour has been made to follow it in the present case.

For the purpose of illustrating this article, and by permission of the publishers, two maps are reproduced from "Bartholomew's Atlas of Meteorology," showing the mean isobars and the mean wind currents over the globe in January and July. A close relation exists between pressure distribution and wind circulation in all parts of the earth, this relation being contained in what is known as Buys Ballot's law. This law states that if an observer stands with back to the wind the low pressure will be found to the left, and the high pressure to the right in the northern hemisphere, the converse being true in the southern. It has been demonstrated mathematically that this law follows from the rotation of the earth on its axis, and its consequence is that winds tend to flow

spirally inwards on the earth's surface towards a low pressure centre, and spirally outwards from a high instead of directly from high to low pressure, as would be the case if the earth did not rotate. This principle of the relation between wind flow and pressure is of great importance in all wind studies.

"low" a low pressure region, or depression. The wind circulation is indicated by arrows, which fly with the wind. It will be seen that equatorial regions form a belt of low pressure, on each side of which are areas of tropical anti-cyclones located in about 30° N. and S. latitude. Beyond

The maps reproduced show isobars drawn in most cases for every two-tenths of an inch of mercury. Values are also attached to the isobars showing the pressure in the more scientific pressure unit of millibars. The word "high" indicates a high pressure area, or anticyclone; the word

these again pressure falls off towards the poles. The equatorial low pressure is a region of calms, or light airs, known as the "Doldrums," while calms also occur in the central parts of the anti-cyclones to the north and south. These regions are sometimes referred to as the "Horse Latitudes."

The best examples of the North-east and South-east trade-wind currents are found in the eastern parts of the Atlantic and Pacific Oceans, where these winds blow slantingly from the high-pressure regions towards the equatorial low-pressure area in streams some two thousand miles in length, and one thousand or more in breadth. A vast volume of air is delivered into equatorial regions every day by these trade wind currents. Its dispersal seems to be effected in two ways. Some of the air flows on to the westward, and thereafter curves away from the equator, as an East-south-east or South-east wind in the northern hemisphere, and an East-north-east or North-east current in the southern. These currents may be traced in the western parts of the Atlantic and in mid-Pacific. The rest of the air, after reaching the "Doldrums," rises and forms an easterly current, blowing with increasing strength, with increase of height above the surface. This easterly current branches towards the north and south in the northern and southern hemispheres respectively. Considering the sequence in our own hemisphere, the easterly wind turns successively into a South-east, South, and South-west current as it advances northward, and as a South-west wind feeds the upper part of the tropical anti-cyclones. Descending in these regions, it forms part once more of the North-east trade-wind at the surface. This descending air current, which becomes warm and dry by compression, accounts for the fine, bright weather of the "Horse Latitudes," while the ascending air in equatorial regions causes the moist, cloudy atmosphere of the "Doldrums."

It will be seen that over the North-east trade-winds the above system includes a wind blowing from the South-west—that is, in direct opposition to the trade-wind below. This current is known as the counter-trade. Its existence has been ascertained from observations of cloud motion, and more recently by means of small free balloons, or pilot balloons, the motion of which as they rise is observed through a theodolite. Corresponding North-west counter-trades are found above the South-east trades of the southern hemisphere. The system of winds so far described, including the calms of the "Horse Latitudes," the trade winds, and the "Doldrums," is directly connected with the solar heating of the earth, and fluctuates to and fro in a north and south direction with the changing seasons, following the sun with a time lag of from two to three months. Thus the system reaches its most northerly position in August or September, and is furthest south in February or March. An interesting consequence of this motion is that certain localities lie in one part of the system in the summer, and in another part in the winter. Thus the Canary Islands lie in the North-east trades in the northern summer and in the calms of the "Horse Latitudes" in winter.

It has been mentioned that poleward from the high-pressure regions, which lie in 30° N. and S. latitude, pressure decreases. This is particularly the case in the southern hemisphere, where the fall of pressure is relatively rapid. This is a region of strong westerly winds, which extend almost without break around the globe in latitudes 40°-60° S. The corresponding currents are less well marked in the northern hemisphere, but may be traced in the North Atlantic and North Pacific. They are frequently broken up by travelling depressions, so that at times the general westerly character of the wind is almost hidden, and becomes revealed only on a close analysis of the daily records. These travelling depressions are often somewhat shallow, and above them blow the prevailing westerlies undisturbed.

The most important wind currents which remain to be described are the monsoons, a term which is applied to winds which reverse their direction twice in the course of each year. Reference to the charts of world-pressure will show that in either hemisphere the solar heating during the summer months leads to the formation of low-pressure areas over the great continents, while conversely in the winter half-year the severe cooling by radiation leads to the formation of great anti-cyclones in the same regions. The spirally inflowing winds around these summer continental depressions and the spirally outflowing currents around the corresponding winter anti-

cyclones form the great monsoon currents of the world. Monsoonal winds may be traced in many parts of the earth, but the best known example is the extensive current which owes its origin to the Asiatic land mass. That part of it which blows over India is known as the Indian monsoon; but reference to the charts will show that it is really part of a much larger current, which in the summer months blows in one vast stream from the South-west over the whole of India and Burma, and, curving round, blows from South or South-east on the China coast. In the winter months, when Asia is a region of high pressure, the circulation is reversed, and the monsoon blows from North-west on the China coast and over Japan, and from North or North-east over India and the northern part of the Indian Ocean. These monsoonal currents are of great importance to the climate of India, the South-west monsoon bringing large quantities of water from the Indian Ocean in the form of vapour, which condenses and falls as rain over India. A failure of the monsoon leads to a deficiency of rainfall, and has, consequently, very serious effects upon the local crops and the prosperity of the country. It has been demonstrated that the monsoonal currents are comparatively shallow, being not more than two or three miles in depth. On the China coast, in about 30° N. latitude, the upper currents blow from the West throughout the year.

The above is an outline of the more important winds of the globe. Our knowledge of the movements of the upper parts of the atmosphere is still somewhat scanty for many parts of the earth, and in any account such as the present it is necessary to deal chiefly with the surface. As further meteorological research is undertaken, it will become more and more possible to extend such a summary to include the currents at all levels over the whole surface of the globe.

J. S. D.

UNIVERSITIES AND SCHOOLS.

UNIVERSITY NOTES.

The report of the speeches made at the recent influential gathering of representatives of the British Universities has just been made public. The representatives were received by the Chancellor of the Exchequer and the President of the Board of Education, as a deputation charged by their respective Universities to lay before the Government the whole question of the position of the Universities in our educational fabric, and to plead for more generous assistance from the State. As to maintenance, Sir Oliver Lodge pointed out, as stated in an article by Prof. R. A. Gregory in *Nature* of August 15 last, that German Universities received some 72 per cent. of their income from the State, while each of five Universities in America received nearly £400,000. The total amount received by colleges in England and Wales from the Exchequer is only £300,000! He asked, therefore, that the present grant should be at least quadrupled.

Sir Bertram Windle put the case for better salaries for University teachers. Those in other branches of the profession should be interested to learn that a full-time professor in Ireland gets £250 per annum, and that the maximum at the best-paid college there is only £800. Incidentally, it is understood that a movement is on foot in England to form an Association which shall represent the interests of all University teachers; such an organization has been badly needed for years.

The Chancellor, in replying to these speakers, pointed out the danger that the Treasury might refuse any demand which did not tend to reduce the burden of debt, though he himself did not agree with that view. On the contrary, he believed that money spent judiciously on education was money that would repay the State.

After describing the inadequacy of superannuation at the Universities, Sir Alfred Dale stated that, so far as the Northern and Midland Universities were concerned, probably 70 per cent. of the students began their education in elementary schools. When a boy or girl could remain at a secondary school until the age of eighteen, he or she had little difficulty in obtaining a University training. The real trouble lay in the lack of exhibitions and scholarships to enable students of fifteen and sixteen years of age to stay on at their secondary schools.

The President of the Board of Education answered the deputation very sympathetically. He expressed his conviction that there

must be more liberal assistance from the State, but emphasized the paramount importance of preserving University autonomy.

OXFORD.

The perennial question, whether Greek shall be compulsory at the University came up at Oxford on March 4, when Congregation carried the preamble to a new statute, one effect of which will make Greek no longer compulsory at Responsions. The voting eventually was 123 to 63, but the matter at issue was not, strictly, Greek or no Greek, but the adoption of a combination of four subjects, of which Greek may, or may not, be one for the examination. In addition to the stock arguments, one speaker pointed out the change in the class of the schools from which Universities now draw their students—Municipal, County, and the like. This Prof. Headlam declared to be pure opportunism.

Prof. Murray stated that out of 160 British-speaking Universities, Oxford and Cambridge were the only two which definitely based their culture on the classics. He voted for the preamble, apparently partly on account of the impossibility of keeping up classics by compulsion.

CAMBRIDGE.

Many teachers throughout the country will regret to hear that Sir J. J. Thomson is resigning his position as Cavendish Professor of Experimental Physics in the University of Cambridge. This is a loss which will be felt not only in the University itself, where he has done so much to develop the teaching of natural science and has so worthily maintained the reputation of English science abroad, but also by teachers generally, to whom he has been so long an example and an inspiration.

LONDON.

The tenth Annual Report of the Military Education Committee of London University contains some suggestive figures. The total number of Commissions granted since the War began to cadets, ex-cadets, graduates, and students is now no fewer than 4,413, of whom 584 have fallen. The number of distinctions gained during the same period is 1,175. In addition, at the request of the War Office, graduates and students at the University with training in chemistry enlisted for special service with the Royal Engineers for service overseas.

Elections to fill vacancies on the Senate will be held in May, and will be fought almost entirely on the burning question of the reconstruction of the University—which, in practice, means mainly the continuing or abolition of the "external" degree. Whereas many highly placed officials are in favour of the latter course, the University Graduates' Association is in strong opposition, holding that the recommendations of the Haldane Commission should not be enforced, feeling strongly that no alteration of constitution or status should come except by mutual consent. The question is one which so closely affects teachers who are graduates of the University that they should carefully consider their position before the election.

Both King's and University College have taken their full share in War activities, apart from active service. In the case of the former, the head of the Chemical Department, Sir Herbert Jackson, K.B.E., was chosen as director of the new Government British Scientific Instrument Research Association. The Admiralty brought many problems to the physics department, including thermionic devices and questions from the anti-submarine department. Students at the College, present and past, may be reminded that M. Venizelos, when he returned to power, at once persuaded his government to make an annual grant for the establishment at the college of a chair of Modern Greek; and that Dr. Masaryk, first President of the Czecho-Slovak Republic, is a member of its Professorial Staff.

Nor has University College lagged behind in similar work. The War hit the College hard financially, so that economy has been practised and expenditure deferred wherever possible. In addition to its valuable contributions during the War, it has arranged special courses in all faculties to meet the needs of students returning from War service. As at King's, special attention is being given to modern languages. A Department of Scandinavian studies is well under way, and the Department of Italian has been extended. The College is only waiting for funds to institute a chair of Dutch studies.

WALES.

The University College, Aberystwyth, has somewhat anticipated the activities of the University Extension Board by arranging for a series of lectures by the staff in the vicinity. No doubt this scheme

will be of great help to the adult population of the neighbourhood, and it will also react beneficially on the College by enlisting greater sympathy and support.

Swansea College.

A committee of experts appointed by the Privy Council have been investigating the claims of the College to become a Constituent College of the University, and there is therefore much anxiety locally as to their report. The visitors were: Prof. T. Hudson Beare, Edinburgh (engineering); Prof. G. A. Gibson, Glasgow (mathematics); Prof. E. H. Griffiths, Cambridge, late of Cardiff (physics); Prof. Sir William Pope, Cambridge (chemistry); Prof. H. C. H. Carpenter, South Kensington (metallurgy); Sir George Foster, London University (art); and Prof. Matheson, Cambridge (art); two representing art and five science.

The salary question is still to the fore in many parts of South

Wales in spite of the increases which have been granted by the Education Authorities. A determined attempt is being made by the various

organizations to force the Committees to adopt the scales recently recommended by the Departmental Committees, which are in the great majority of cases far more generous than the existing scales. In the Rhondda, about a thousand teachers have tendered their notices. In Pembroke, a similar action has taken place; the notices terminating on March 31. The assistant masters under the Glamorgan Authority have also met at a Conference to discuss the situation, and to decide on their future action, and hints of a strike have been given, though it is difficult to see how in their case they would be in a position to exercise much pressure on an obstinate authority owing to the lack of funds and organization. In the larger boroughs conditions are more satisfactory, but the above instances tend to show that the prevailing spirit of unrest and dissatisfaction with existing conditions, has permeated even the teaching profession, and this is not to be wondered at when we remember how insufficiently paid they have been in Wales in the past, and how unattractive their conditions of service generally.

The Cardiff College Council have decided to advertise for a new principal at a salary of £1,000 per annum. At the meeting, Mr. Percy Watkins made the interesting suggestion that the appointment should be referred to the University Commission, but it received rather scant support, probably because the Council did not feel justified in shirking its responsibility towards the College in such an important matter affecting its welfare.

The annual inter-collegiate meetings were held during the last week in February, and they appear to have been most successful. These gatherings have been suspended during the period of the War, but the return of the soldier-students has made it possible to reawaken interest in them; and the proceedings were marked by considerable "liveliness" and enthusiasm. Delegates are interchanged between the Colleges for hockey, football, dramatic entertainments and debates. There were also representatives from various provincial Universities at an Inter-University debate. These included Birmingham, Manchester, Liverpool, and Sheffield. During the current term at the three Colleges the whole College aspect has changed, and every activity is being pursued with genuine enthusiasm and energy, all of which augurs well for the efficiency of the reorganized University of the future.

The Denbighshire Education Authority have at last decided to establish a Girls' School at Ruabon. For some

Education Authorities.

reason or other, no provision was made in the scheme under the Welsh Intermediate Education Act to convert the existing Grammar School into a Dual School, though the smallness of the population fully justified such a change. The majority of the girls in the district were, therefore, obliged to attend the neighbouring schools at Llangollen or Wrexham. Now that the desirability of establishing a local school has been forced on the Committee they are faced with the difficulty that the county scheme does not allow it to be done, and a revision of the scheme is a cumbrous and slow matter. They have, therefore, resolved to establish the school under the Education Act, 1902, in other words, as a Municipal Secondary School. This is not a satisfactory solution of the problem, as it has been felt for a long time that this procedure, which has also been followed rather extensively in Glamorgan, tends to disorganize our intermediate school system, and to create difficulties between the Board of Education and the Central Welsh Board. So far, North Wales has not established any Secondary School outside the Welsh Intermediate Education Act, and it is unfortunate that the Denbighshire Authority has not been able to find some other solution of this problem.

The same Committee have also taken the rather novel step of

University Extension.

allowing religious instruction in the elementary schools to be conducted entirely in the Welsh language in the bilingual districts. Hitherto, such instruction has been given in English, and it would be interesting to know the reason which induced the Committee to make this alteration.

As evidence of the influence of the Education Act on the Welsh Counties, reference may be made to the appointment of an organiser of physical exercises, as well as an instructress for the primary schools in Montgomeryshire. This is a most valuable innovation, and it should be followed by other Education Committees, because we have often been taunted in Wales that far too little attention has usually been given to the physical development of the child. Even the specialist inspector of the Central Welsh Board, in her earlier reports, laid much emphasis on the supposed under-development of the average pupil attending the Intermediate Schools, and though these criticisms did not by any means receive any general support or credence, yet it was agreed that in the elementary schools, from whom these pupils were largely drawn, there had been far too much neglect of this aspect of school life.

The Carnarvonshire Education Committee propose to open a central school at Bangor similar to the schools already opened at Carnarvon and Llandudno. The Committee are of opinion that the absence of such a school leads to the stoppage of the education of practically all the pupils above the compulsory school age in the city, as only five such pupils remained in the elementary schools as against 217 in Carnarvon. These Central Schools are a special creation of the County, and it is, therefore, not easy to assign to them their true function in the general scheme. One would have thought that it would have been wiser to postpone this decision as regards Bangor until the effect of the new Education Act was understood, and that it is a somewhat doubtful policy for them to complicate the general school system of the County. What, for instance, will be the relationship of this type of school to the continuation schools?

In the boroughs the problems arising from the new Act are, if anything, more complex than in the counties. In Swansea, for example, there are special difficulties to be faced owing to the recent extension of the borough, as well as to its great industrial importance, and the need of commercial and technical facilities. The Education Committee, on the report of the Director of Education (Mr. T. J. Rees), will, therefore, wisely proceed to appoint several committees, on whom experts will be co-opted to discuss various schemes of development in the borough, and to take a general survey of the whole position.

The recently issued report of the Appointments Board for Wales testifies to the excellence of its work during the year 1918. It is gratifying to note that the existence of the Ministry of Labour has not in any way hampered the work of the Board; on the contrary, there has been the friendliest co-operation between them. Nor need there be any overlapping, because the Appointments Department of the Ministry of Labour does not concern itself at all with money; its function is limited to finding employment within the district, and the task of dealing with the product of the Welsh secondary schools will remain with the Board.

The information supplied by the Appointments Board is most valuable to all candidates for posts, and ample guidance can always be obtained from the Secretary. The extent of the work is shown by the fact that 1,212 vacancies were notified to the office, comprising educational, secretarial, and clerical vacancies. Vacancies in factories and similar places were also notified, and a large number of posts were filled during the year—80 teaching appointments, 26 secretaries, 3 head masterships, &c. Under peace conditions, no doubt the usefulness of the Board will be much further extended, and if due advantage is taken of this organization by the colleges and schools, they will benefit greatly.

SCOTLAND.

The Annual Report of the Carnegie Trust for the Scottish Universities contains an account of the operations of the Trust during its third quinquennium. War conditions have seriously affected the work under the scheme for the endowment of research. The services of young men have not been available for research, and the published output has been adversely affected by the confidential nature of much of the work of Fellows and Scholars in Chemistry. Nevertheless, the reports of the experts give convincing testimony, not only to the value of the work done, but also to the assistance it has given to various public departments during the War, and to its stimulating effect on academic life in general. During the five

years there were awarded 62 Fellowships, 86 Scholarships, and 173 grants; but there were actually at work only 54 Fellows, 68 Scholars, and 151 grantees. The output has been 38 books, and 286 contributions to journals of learned societies. The cost of the scheme during the five years has been £27,540, which is over £8,000 less than was expended during the quinquennium 1908-13. Three Fellows and six Scholars lost their lives on war service. The Trustees have offered annually an Essay Prize of £100 within the departments of History, Economics, and Modern Languages and Literature. There have been eleven competitors, but the prize has only once been awarded, when in 1915 it was given to Dr. McIver, now Associate Professor of Political Science in Toronto University, for his book on "Community."

The total grants which have been made under Clause A of the Trust Deed during the last sixteen years have amounted to £662,633, including—for libraries, £64,775; for new buildings and permanent equipment, £338,513; and for endowment of Chairs and Lectureships and other purposes, £259,345. The Trust has thus assisted in providing the complete, or partial, endowment of seven Lectureships in St. Andrews and Dundee, two Chairs and five Lectureships in Glasgow, one Chair and six Lectureships in Aberdeen, and two Chairs and eight Lectureships in Edinburgh. The Trust has also assisted in providing new buildings for engineering in Dundee; for natural philosophy, physiology, materia medica, forensic medicine and public health in Glasgow; and for natural philosophy, engineering, forestry, &c., in Edinburgh. Large additional grants which have been made are still unexpended, owing to war conditions. The class fees paid for students during the same period amounted to £605,278. 209 students have made voluntary repayment of the fees paid for them, amounting to about £7,000.

The General Council have approved Ordinances instituting a degree of Ph.D., and a degree in Commerce, as well as an Ordinance providing regulations for degrees in Arts, Science, and Letters. Under the last of these Ordinances, it will be possible for women who have gained diplomas from Oxford and Cambridge, but are at present barred from becoming graduates, to obtain degrees at St. Andrews.

The University Court have appointed Mr. J. W. Pirie to be Lecturer in Comparative Philology (with special reference to Classical Philology), as from October 1, 1919.

Dr. William Stephenson, Emeritus Professor of Midwifery, died at Aberdeen on February 24, at the age of eighty-one. He held the Chair for thirty-seven years, and was an able teacher. He was a graduate of Edinburgh University, President of the Edinburgh Obstetrical Society in 1908, and a member of the Council of the London Obstetrical Society. He contributed many papers on his subject to medical journals.

The Senate has resolved to confer the following honorary degrees:—D.D.: The Rev. R. S. Anderson, Barclay U.F. Church, Edinburgh; the Rev. James Burnett, Kennethmont; Prof. John Dickie, Knox College, Dunedin; the Rev. James Gillan, Alford; the Rev. James Harvey, Edinburgh; the Rev. James Murray, Smyrna; the Rev. Canon W. Perry, Principal of the Scottish Episcopal Theological College, Edinburgh; the Rev. Robert Semple, Aberdeen; and the Rev. John M. Sims, C.M.G., Principal Chaplain to the British Expeditionary Force. LL.D.: Field-Marshal Foch; Field-Marshal Sir Douglas Haig; General Sir Edmund Allenby; Admiral Sir David Beatty; Adolf Max, Burgomaster of Brussels; Surgeon-General Sir James Porter; Lord Provost Sir James Taggart, Aberdeen; Prof. F. O. Bower, Professor of Botany, Glasgow University; Sir James Cantlie, K.B.E., London School of Tropical Medicine; Prof. W. MacNeile Dixon, Glasgow University; Sir James Galloway, K.B.E., R.A.M.C.; Sir David Hardy, M.B., Brisbane; William Kelly, architect, Aberdeen; and James McPherson Wattie, H.M. Chief Inspector of Schools.

Mr. Robert K. Hannay, Curator of the Historical Department, General Register House, Edinburgh, has been appointed Professor of Ancient (Scottish) History and Palaeography, in succession to the late Prof.

Hume Brown. Prof. Hannay, who is a graduate of Glasgow and Oxford, was Lecturer in Ancient History at St. Andrews University from 1901 to 1911. He has done excellent research work at St. Andrews and Edinburgh.

Dr. George Barger, Research Chemist to the Medical Research Committee, National Health Insurance, has been appointed to the new Chair of Chemistry in relation to Medicine. Prof. Barger was educated at University College, London, and King's College,

Cambridge. In 1913 he became Professor of Chemistry at the Royal Holloway College, University of London. He is a distinguished organic chemist.

The Treasury has given to the University an advance of £7,000 by way of grant from the Development Fund, in aid of the endowment of a Chair of Forestry, on the condition that the remaining £7,000 required for the endowment is provided from other sources. The University Court has issued an Ordinance instituting the new Chair. The annual salary of the Professor will be £900. The Court has also issued an Ordinance, instituting a Chair of Zoology, with special reference to the Zoology of the invertebrates. The salary of the Professor will be £900 a year. The University will thus have two Chairs in this subject. The Court has resolved to institute a Lectureship in Technical Chemistry, and to establish a post-graduate school of studies in Theology, on lines suggested by the Faculty of Divinity.

The Governors have found it necessary to increase the fees for both day and evening classes. The estimated increase from revenue in fees is about £1,100. The fees paid at present amount to less than one-fourth of the total expenditure on education. The addition proposed will contribute to a small extent to the increased amount (from £5,000 to £7,000 a year) required for the work of the College.

The Education Department have issued regulations for the first election of the new Education Authorities. They include full instructions to returning officers, &c., as well as regulations for the method of voting by Proportional Representation, and a specimen example of an election conducted on this system. The date fixed for the elections in Edinburgh, Glasgow, Dundee, Aberdeen, and Leith, is April 4, and the County elections will take place on April 11. On the suggestion of the Education Department, trial elections are to take place at Edinburgh and Glasgow, in order to facilitate the work of enumeration at the real election. The voting papers will be marked by the staffs of the School Boards according to the plan which has been devised, so as to test the enumerators on all points in the count that may arise when they have to deal with the votes of the electors.

Unfortunately, there is as yet no sign of strong interest on the part of the electors, and most of the candidates who are being nominated are members of the former School Boards; but Sir Richard Lodge and Prof. Darroch are candidates for the South Edinburgh Education Authority.

The Glasgow Provincial Committee for the Training of Teachers have recommended to the Education Department that assistant teachers and provisionally certificated teachers, if recommended by one or other of the Provincial Committees as efficient, after consideration of reports from the managers of their schools and H.M. Inspector, should be granted recognition by the department as certificated teachers. In connexion with the arrangement of summer classes for teachers, the Committee propose to co-operate with the Board of Agriculture in order to organize a scheme for establishing toy-making as a home industry in the Highlands, and a class for the instruction of teachers in toy-making will be conducted in the summer months. Grants are also to be given to specially qualified teachers of modern languages in connexion with attendance during the summer months at courses abroad in French and Spanish. Under the new Education Act, continuation school work must be over by seven o'clock in the evening, and instruction must be given in vocational subjects and in physical training. At a meeting of the Edinburgh Provincial Committee, Mr. Alison pointed out that the supply of teachers for these schools would be a serious matter. The ordinary teacher in the day school could not work double time. An additional supply of teachers would be required, and it was estimated that, when the scheme was in full operation, between 3,000 and 4,000 more teachers would be required in Scotland, irrespective of vocational teachers. The St. Andrews Provincial Committee is making arrangements to resuscitate the summer school for teachers this year. The courses are to be organized chiefly to attract women teachers of the infants' and junior divisions.

Apart from the general grant in aid of teachers' salaries, a sum of £50,000 was set aside for the purpose of making extra grants in cases where the salaries are below the average. This sum is now being distributed by the Education Department to the School Boards and Managers concerned, who will be in a position to pay from the grant 45 per cent. of the difference between the average

salaries of their teachers and the general average for the district. The Department ask the School Boards to contribute an extra sum in order to pay salaries on the normal level, where the school rate permits, and a reasonable contribution towards this end in other cases.

The Governors of George Heriot's Trust, Edinburgh, have approved a new scale of salaries for the teaching staff of the College. The Principal's salary is to be £950, rising by £50 a year to £1,250. The salaries of Professors, now receiving £700 and £750, are to rise by annual increments of £25 to £800, and in exceptional cases to £1,000. The scale for assistant professors is £275, rising by £25 a year to £400, and in exceptional cases to £500. The new proposals are subject to approval by the Education Department.

Mr. James Glass, London, in order to show his appreciation of what was done for him as a boy in Edinburgh, where he was educated as a foundation of George Watson's Hospital, has given to the Edinburgh Merchant Company properties worth about £20,000, to establish a School of Science in connexion with George Watson's College for Boys. Part of Mr. Glass's intention is to give former pupils of the College, who have been disabled in the War, a scientific training as consulting chemists. The Merchant Company have gratefully accepted the gift.

Mr. A. D. Ferguson, a director of the Girls' School Company, Glasgow, has prepared a memorandum with reference to a Bill to provide pensions for Scottish teachers, on the lines of the English Act. He suggests that the Bill will provide for the participation in the scheme by teachers in private schools, as well as by teachers in State-aided schools, on various conditions—e.g., that the private schools must not be profit-earning, that they must accept Government inspection, must be unable to provide pensions out of their own funds, must be administered by a Board of Governors, three of whom must be nominees of the Education Department, &c. Mr. Ferguson asks whether it is possible to include private school teachers in the pension scheme without (a) forcing the schools to come under the hard-and-fast control of the Department, and (b) incurring the charge of using State funds to augment indirectly private revenue. He suggests that, in place of the conditions indicated above, teachers should be allowed to participate, provided (a) the proprietors of the schools enter into an agreement binding them not to pay a higher rate of dividend than the current rate of interest, from time to time, on Government stock; and (b) in the event of proprietors deciding to wind up the Company, the Government should be entitled to take over the whole assets in payment of the par value of the shares. In any case, he holds that it ought to be provided in the Bill that service in any school under Government inspection and certified as efficient should be reckoned as qualifying service in the event of the teacher proceeding to a Government school.

It seems very unlikely that Mr. Ferguson's proposals will be accepted as a substitute for the conditions which he expects to be included in the Bill. The condition that the schools must not be profit-earning would almost certainly be enforced, and the payment of a dividend not higher than that of Government Stock would probably be regarded as profit-earning. Mr. Ferguson admits that, if the conditions are enforced, the private schools will lose their autonomy, and, consequently, their *raison d'être*. He cites, as instances of the private school companies who might come under the provisions of the Bill, the Girls' School Company, Glasgow; the St. George's School Company, Edinburgh; and St. Leonard's School, St. Andrews. The first two of these are under Government inspection, the third is not. All three companies pay dividends, and the St. Leonard's dividend is much higher than that of any Government security. St. Leonard's, indeed, may be left out of the question, as it has a pension scheme of its own. And the two companies which do not provide pensions would find it difficult to convince the Treasury that they are unable to do so, if they can give their shareholders even a modest dividend.

IRELAND.

This spring promises to be an important time for Irish education. The two Committees appointed by the Lord Lieutenant have finished their work, and the Reports have been published. The Report on Primary Education is limited to salaries. The recommendations are unanimous, and propose a new method of remunera-

tion, based upon the three following principles of calculation: (a) a normal scale of salary with annual increments for all teachers, principals, and assistants, in schools maintaining, in the case of men, an average attendance of thirty pupils, and, in the case of women, of not less than twenty; (b) a scale of higher increments for teachers of very satisfactory service varying with the size of the school; and (c) capitation payments based on the average attendance of pupils payable to the principal teachers. The normal scale for trained men teachers should commence at £100, and rise by eight annual increments of £5, and then by eight more increments of £7 10s., to £200. For trained women teachers the scale should be from £90 to £170, with similar increments of £4 and £8. For very satisfactory service there should be further increments, bringing the salaries of men teachers up to a maximum of £245, £260, £275, and £290, according to the size of the school, and for women teachers similarly up to £200, £210, £220, and £230. Capitation grants should further be paid to head teachers of schools with an average of over thirty pupils in attendance at the rate of 10s. per pupil up to one hundred and twenty pupils, and 5s. for such pupil over that number. In large schools a vice-principal should also receive a capitation grant, but not beyond a maximum of £40. Small special increments are also recommended for teachers with special qualifications, such as a degree or a higher teaching diploma. It is calculated that the cost of this scheme will be £900,000 more than is spent at present, and some of the Committee recommend that this should be defrayed by a local rate, while others, going beyond their immediate reference, recommend that there should be a Minister of Education for Ireland responsible for Primary, Intermediate, and Technical Education. Finance is, of course, the bedrock of all improvement in Irish Education, and, in default of a willing Treasury, Ireland must be prepared to pay more for her own education if she wishes it to be brought up to date.

It was interesting to see that, in his first speech in Ireland, the new Chief Secretary, Mr. Ian Macpherson, dealing with reconstruction, before this report appeared, dwelt upon the importance of efficient education. He is stated to have said that: "Nothing in his judgment was so important as to have a system of education just, equitable, and efficient throughout the country. Without it, however successful they might be in their attempts to produce material progress within their own confines, they could never hope to hold their own in the great moral and industrial struggle of the world. The materialistic mind of the great controller of industry knew the necessity of seeing that those trained to assist him were adequately paid. Though much had already been done in Ireland by the State in augmenting the income of the teachers, it was still only too true that a number of them were left without sufficient to maintain themselves and their families, and it was, perhaps, not surprising to find evidences of a soured and embittered feeling among some of them, which must inevitably react upon the children. As they were aware, two Committees appointed by the late Government, and consisting of Irishmen, had been dealing with the financial position of the teachers, and they were anxiously awaiting their reports." What the Chief Secretary requires now is courage to reform the Primary and Intermediate systems on the lines which these two Committees recommend.

The Report of the Committee on Intermediate Education, which has just appeared, is a document of the first importance. It covers the whole field of Intermediate Education, and, although it deals largely with the salaries and tenure of teachers, it does not confine itself to these matters, but deals boldly with the essential features of education generally. Only the main points of the report can be noted here. The report is signed by fourteen members out of eighteen: three of the others, whilst agreeing with much, have written a minority report dealing mainly with the matter of teachers' tenure; while one member, Sir Joseph Larmor, who did not attend any of the meetings, contents himself with a note. The chief points are: (1) Recommendations are made intended to give teachers security of tenure by providing due notice of dismissal, and the right of appeal to a referee or tribunal, to be agreed upon by the representatives of the heads of schools and of the assistants. (2) A scale of salaries is recommended, rising from £180 to £450 a year for all full-time registered teachers. The minimum, i.e. £180, is to be paid by the school, the increments by the Central Authority. Increments are to be payable on a certificate signed by the head and by an inspector.

Schools must pay the minimum salary to such number of teachers as the Central Authority thinks proper, which shall be not less than one for every forty pupils for whom a capitation grant is paid. (3) A pension scheme should be established on the lines of the recent School Teachers' Superannuation Act (1918). (4) The Central Authority should provide exhibitions to enable intending teachers to take a course of training. (5) Primary, intermediate, and technical education should be co-ordinated under a system similar to that in England. (6) The present system of payment of grants should be abolished, all grants amalgamated, and one uniform flat capitation grant paid to all recognized schools. (7) Special grants should be made to small schools when the capitation grant falls below a certain level. (8) For the present system of examinations there should be substituted two, an "Intermediate" and a "Leaving Certificate" examination; and the syllabuses should be on a wider and more elastic basis than at present. (9) Exhibitions should be provided more freely to enable children to pass from primary to intermediate schools, to continue in the intermediate schools, and to pass from the intermediate schools to the University. (10) Irish Intermediate Education should receive its fair share of moneys voted from the Treasury, which would give it another £65,000 a year, and, in addition, a flat national rate should be levied throughout the county, the proceeds of which should be paid to the account of the Central Authority, which should be assisted in its distribution by an Advisory Committee representative of the various localities. It is estimated that a 2d. or 3d. rate would be adequate.

The epidemic of influenza has raised serious questions affecting the grants received by Intermediate Schools. Many schools throughout the country were closed in the autumn for three weeks, and many more have been closed, especially in the South of Ireland, for a similar period during February and March, and where the schools have not been closed, the attendance has markedly suffered, and the continuity of the teaching work has been seriously interfered with. At present, part of the school grants depends upon attendance, and part upon examination and attendance combined. There is a grave danger that in many cases grants will be lost through lack of attendances, and that many pupils who would otherwise have passed the examinations will fail as a direct result of the epidemic. Representations are therefore being made by school managers and associations to the Intermediate Board and to the Department of Technical Instruction that, to obviate the loss of grants to the schools, they should consider whether the regulations both as to attendance and as to passing the examinations should not be made easier for the present year owing to the abnormal conditions.

The Irish Geographical Association had arranged for its first series of four lectures to be delivered in March and April in the Royal College of Science, Dublin, as follows:—March 14, "Modern Geography," by A. Williamson; March 21, "Geographical Factors in Economic Development," by Prof. Oldham; March 28, "Homelands of Animals," by Prof. Carpenter; and April 4, "Ireland, the Outpost of Eurasia," by the President, Prof. Grenville Cole. Unfortunately, Mr. Williamson, Principal of Rathmines School of Commerce, died suddenly a week before he should have lectured and out of respect to his memory no lecture was given on March 14.

The Department's Journal, published in March, contains some interesting articles on its work in Ireland. Sir T. W. Russell, the late Vice-President, contributes a survey of "Twenty Years of Agricultural Development in Ireland, 1899-1919." Prof. Jeffcott has written an account of the munition work carried out by the engineering section of the Royal College of Science. Three days after the War commenced, classes were formed for short courses in motor driving, motor repairs, military bridge work, earthworks, and signalling. Most of the men in these classes joined the Army, and then in June, 1915, the engineering shops undertook the output of fuse parts for high explosive shells. The College at first undertook to produce 1,000 parts per week, but eventually produced nearly 17,000. During last year it was also engaged in manufacturing aeroplane turnbuckles, which were in urgent demand. The work was done largely by voluntary helpers, and was entirely in addition to the regular College classes. The Department has also issued the Time Table and Regulations of its Technical School examinations to be held in May in the following subjects: commerce, building trades, applied chemistry, electrical engineering, mechanical engineering, domestic economy, and art.

PRIMARY SCHOOL NOTES.

The Failure of the Salary Commission.

The hundred and one scales of salaries for teachers which exist in the various educational areas of the country speak eloquently of the failure of the Departmental Committee's Report on Teachers' Salaries to accomplish its purpose. It is now admitted that the insertion of illustrative scales of salaries in the Report was a grave error, for notwithstanding the clear intimation that the figures used were merely quoted in application of certain definite principles, Education Committees at once began to discuss the possibilities of Scale I, Scale III, &c., of the Departmental *Scales of Salaries*. There exists a hazy feeling that these scales have the authoritative approval of the Board of Education, and there is a general ignorance of the fact that principles only are approved in the Report. It is significant, therefore, that the Lancashire County Teachers' Association—the largest and most influential in the membership of the National Union of Teachers and representing a membership exceeding 14,000—should have unanimously resolved at the annual assembly in March to ask for a National Commission to inquire into the question of Teachers' Salaries. The position is one which brooks no delay, since upon the establishment of an adequate national scale of salaries for teachers depends the adequacy of the supply to meet the calls of the new Education Act. Some areas are already taking the necessary action to combine in the formulation of uniform salary schemes, but the differences in the scales drawn up by the combined authorities vary so unaccountably that a solution of the problem is brought no nearer.

The Appointment of Whitley Committees.

One of the most hopeful auguries for the successful introduction of school reform is the general movement in favour of the establishment of Whitley Committees in connexion with the work of Local Education Committees. Many authorities are setting up Consultative Committees composed of equal representation from the Education Committees and the Teachers. In addition, some of the considerable authorities are arranging for the appointment of Advisory Committees, by means of which matters concerning particular grades of teachers and the minor detail of professional routine can be periodically discussed. The establishment of the new bodies does not affect the claim of teachers to direct representation on Education Committees. On the contrary, the professional view is that this will be more necessary than ever when the Advisory and Consultative Committees are set up.

Salary Adjustments.

The settlement of the problem of teachers' salaries still appears to be remote. Practically every Education Authority in the country is either revising salary scales or temporizing by adopting a policy of bonus doles. In the latter event it is hoped that a period of stability in prices will shortly be reached, when scales approximating to the cost of professional living may be introduced. Other authorities again desire to throw the burden of increasing salaries so far as possible upon the Board of Education grants, which are now comparatively liberal. While the far-sighted areas can, by establishing fair salary schemes, guarantee the teaching supply and the educational wellbeing of their students, other authorities may inflict irreparable injury upon their young people by depriving them of a sufficient supply of competent teachers. The adoption of equitable national scales would therefore appear to be an opportune and wise policy. Advances of some degree have been made in the salaries of teachers everywhere, and in a measure the half-way house to a general uniform rate has now been passed. Doubtless the discussion of the question of a national scale at the Easter Conference of the N.U.T. will result in the formulation of a definite public policy.

The Status of Continuation-school Teachers.

As far as continuation schools have been established, they appear to be working on the lines of evening continuation classes, with special regard to instruction in subjects bearing upon the daily occupation of the students. It is probable that teachers from both primary and secondary schools will be required to take up appointments in the new schools as soon as they have emerged from the experimental stage. It is important, therefore, that definite conditions of service and remuneration should be laid down for continuation-school staffs as early as possible, since such a course would not only guarantee the soundness of the instruction given, but would assist towards the establishment of free relations between teachers of various types upon common ground. Under favourable

conditions the new continuation schools would constitute an important factor in facilitating the free movement of teachers in all grades of schools desired by the President of the Board of Education.

* * * * *

National Union of Teachers.

The engagement of the President of the Board to address the Annual Conference of the National Union of Teachers marks a record in the history of the Union, as Mr. Fisher is the first President to honour the Easter meeting by his presence. The event is symptomatic not only of the new public outlook upon education, but of the revolution which the events of the War have wrought in the relations between members of the education profession and the official administrators. The old aloofness has entirely disappeared, and there is a genuine feeling among teachers that real reform in all branches of school activity is at hand. Mr. Fisher has a special claim upon the affections of teachers, and his reception will be the more cordial on that account.

REVIEWS AND MINOR NOTICES.

CIVILIZATION AND PHYSICAL DEGENERATION.

Man's Supreme Inheritance. By F. MATTHIAS ALEXANDER.
(7s. 6d. net. Methuen.)

The volume before us is a new and enlarged edition of a work which first appeared in 1910. On opening it the reader may inwardly object to what seems an excess of introduction, advertisement, and recommendation. Yet such names as those of Dr. John Dewey and Dr. Frank Granger furnish, at any rate, a preliminary guarantee that, if the author is not himself a professional psychologist, and if therefore to the instructed person his use of psychological terms is not invariably orthodox, his claim to have produced a striking and an original piece of work is by no means thereby invalidated. And in our case this preliminary guarantee has been made good by a careful perusal of the book.

The long process of man's evolution from savagery to civilization has been an unconscious, or subconscious, and not a reflective process. While it has lasted, man has not consciously taken himself in hand, but, like the lower animals, has been subject to forces of which he has been unaware, and which have only recently come to light. Now that the chapter of savagery is approaching its close, now that civilization is not only with us but is becoming universal—what next? The physical degeneration which sets in with civilization is a thrice-told tale. The condition of civilized man's eyes and teeth, and the excellent palliatives that science has been driven to devise, are only among the more obvious illustrations of the reality of this degeneracy.

The proposed remedies are fairly familiar to us all. Long ago Rousseau advocated a return to "Nature" and exalted the condition of the "noble savage." But such a return we know to be impossible. As Frazer has pointed out, we are witnessing, though we are hardly aware of it, the last act of a long drama, a tragedy and comedy in one; and whatever becomes of the savages, the curtain must soon descend on savagery forever. In our own time Wagner has preached "the simple life," Tolstoy has practised it, and Edward Carpenter has announced the cause and *cure* of civilization. Not only so, but the air is full of mind-cures, rest-cures, and kindred attempts to meet the danger of that mental, nervous, and muscular debility which is the outcome of conditions resulting from the general trend of our development. And most of our "physical culture," consisting of schemes of mechanical exercises, are in Mr. Alexander's view, in hardly better case. They are "the obvious, uninspired method which naturally presents itself as a remedy for the ills arising from an artificial condition." They seem to go straight to the source of mischief, but in fact the "physical culture" resorted to by, let us say, our over-driven and degenerate clerk, only has the effect of creating civil war within his bodily organism.

PUBLISHED BY MACMILLAN & CO., Ltd.**W. & A. K. JOHNSTON'S PUBLICATIONS.****ATLAS GEOGRAPHIES.**

A Physical Geography. Covering the work required for the Oxford and Cambridge Locals and other University Examinations. Illustrated by 11 Maps and 85 Diagrams. **2s. 6d. net.**

Junior Atlas Geography of the World. Containing Orographical, Transparent Route and Climatic Maps, and Maps showing Distribution of Vegetation, Minerals, Manufactures, Population and Political Divisions. **4s. net.**

In following Parts:—

9d. net; Limp Cloth, 1s. net.

British Isles
Europe
Asia
Africa
Australasia
North America
South America
India

Special Maps illustrating Surface Routes, Climatic Vegetation, Mineral Productions, Manufactures, Distribution of Population, and Political Divisions.

Practical Exercises are set at the end of each Section.

British Empire Beyond the Seas. Limp Cloth, 1s. net. Sewed, 9d. net. Index and Cloth Boards, 1s. 4d. net.

For Upper Forms of Secondary Schools and University Students.

Atlas Senior Geographies. 2s. 6d. net each.

Now Ready.

British Isles
Europe
Asia
Africa

Each Chapter is illustrated with Special Orographical, Transparent Route and Economic and Political Maps of the natural region to be studied.

Ready Shortly.

SENIOR GEOGRAPHY OF EUROPE.

Senior Geography—Mediterranean Lands.

Subject Matter and Maps brought quite up to date. Orographical, Transparent Route and Economic and Political Maps of each natural region.

Commercial Atlas Geography. 2nd Edition. **8s. 6d. net.**

Practical Geography Notebooks. 40 quarto pages. Sewed, **6d. net.**

British Isles
Europe
Asia
Africa
Australasia
North America
South America
British Empire
Physical

Each Notebook contains:

4 Contour Maps.
8 Blank Outline Regional Maps.
4 Climatic Maps.
Squared Paper for Sections, Graphs, &c.
Ruled Paper for Written Exercises.
Practical Exercises on World Position, Size, Relief Routes, Climate, Vegetation, Animals, Minerals, Manufactures, Commerce, Distribution of Population, Political Divisions.

For Preparatory Forms.

Earth Lore.—24 illustrated lessons in simple Physical Geography, together with numerous practical exercises. **9d. net.** Limp Cloth, **1s. net.**

World and its Peoples.—23 illustrated lessons in Human Geography. Showing the influence of natural features upon the distribution of Products and man's occupations in different parts of the world. **8d. net.** Limp Cloth, **10d. net.**

For Lower Forms of Secondary Schools.**EDINA JUNIOR HISTORIES.**

Written on the Most Modern Approved Methods.

Books I and II, **1s. 4d. net** each.

Now Ready.

Book 1. **The Age of Settlement** B.C. 55—A.D. 1154.
" 2. **The Age of Chivalry** A.D. 1154—A.D. 1485.

Ready Shortly.

Book 3. **The Age of Discovery** A.D. 1485—A.D. 1603.
" 4. **The Age of Strife** A.D. 1603—A.D. 1713.
" 5. **The Age of Empire Building** A.D. 1713—A.D. 1815.
" 6. **The Age of Democracy** A.D. 1815—A.D. 1918.

Dickens. David Copperfield. Abridged and Edited for Schools by H. A. TREBLE, M.A. Illustrated. Sewed. **1s. 3d.**

Hindu Tales from the Sanskrit. Translated by S. M. MITRA. Adapted by Mrs. ARTHUR BELL. Sewed. **1s. 6d.**

Lay's Pupil's Class-book of English Composition. By ED. J. S. LAY, author of "The Pupil's Class-books of Geography, History, The Vegetable Garden," &c. Book I (for children of 9 to 10). Illustrated. **1s.**

Wood's Oral and Written Exercises in English Composition. By ROBERT S. WOOD, author of "Word-building and Composition Series," &c. Sewed. Primary, **6d.** Junior, **7d.** Intermediate, **8d.** Senior, **9d.**

The Scottish Educational Journal.—"An intelligent and practical course of lessons in transcription, punctuation, spelling, word structure, and the art of composition. The lessons are well graded, and may be confidently recommended to teachers of English."

A Health Reader for Girls. By AGNES L. STENHOUSE and E. STENHOUSE, B.Sc. (Lond.), A.R.C.Sc. Fully Illustrated. **3s.**

The Nursing Times.—"This book will be of immense help to teachers, as the subjects are treated from the point of view of a girl and her particular needs and opportunities."

Elementary Mensuration, Constructive Plane Geometry and Numerical Trigonometry. By P. GOYEN, Emeritus Chief Inspector of Schools, Otago, N.Z., author of "Advanced Arithmetic," "Principles of English Composition," &c. **3s. 6d.**

Mathematical Papers for Admission into the Royal Military Academy and the Royal Military College and Papers in Elementary Engineering for Naval Cadetships, July and November, 1918. Edited by R. M. MILNE, M.A. Sewed. **1s. 3d. net.**

Recreations for Teachers or the Teacher's Leisure Time. By HENRY S. CURTIS, Ph.D. **8s. 6d. net.**

So Mr. Alexander entirely rejects any return to the sub-conscious guidance which served at an early stage in man's evolution. We have passed beyond that stage, and there can be no going back. He rejects also the cures and palliatives advocated by different schools of "physical culture," because they presuppose that defects can be remedied by dealing with effects rather than with causes. "No real progress," he says, "can be made, until the pupil consciously ceases to will or to do those things which he has been willing and doing in the past, and which have led him to commit the faults which are to be eradicated." Instead of dethroning intelligence in order that lower forces may again come into operation, we must carry intelligence further, and make its function one of positive and constructive control. The maladies of adjustment in modern civilization must be met by a thoroughgoing system of prevention and not by a system of mere cure. Hence the sub-title of the book—"conscious guidance and control in relation to human evolution in civilization."

Of course, the author does not content himself with a pious recommendation of such conscious guidance and control. He claims to possess a method by which it may be realized, and to have brought that method to the proof in many a concrete case. Whether his method is destined to produce the far-reaching results for which he hopes, only time and experience can show. It must rest with the experts in such matters to confirm or to modify or even to reject the method; but the general principles upon which it rests appear to us, if not unassailable, at least profoundly suggestive. In this notice we have purposely refrained from saying anything calculated to save an interested person the trouble of reading the book. We believe the book ought to be widely read by teachers, and indeed by all who are practically concerned with problems relating to the progress of the race.

BRITISH RULE IN INDIA.

The History of Aryan Rule in India. By E. B. HAVELL.
(15s. net. Harrap.)

Very soon the political constitution of British India will be thrown into the melting-pot. The need for trustworthy and up-to-date textbooks of Indian history, geography, and economics is therefore pressing. Yet, almost without exception, existing books, especially those suitable for younger students, are obsolete. Even the historical sections of "The Imperial Gazetteer" are in need of revision. For within the past sixty years, owing chiefly to unremitting epigraphic research, the aspect of large tracts of Indian history has been transformed; and the older type of textbook, usually compiled with the object of showing the triumphant success of British administration, no longer satisfies serious inquirers. Mr. Havell's work is therefore opportune; unlike so many books on India, it is neither dull nor ill-informed. Though the author is a distinguished official, he has not the official cast of mind; he is an independent thinker, and gives us what is in effect a new interpretation of the early and medieval history of India. His knowledge of Indian art is wide and penetrating, and he here applies it to the elucidation of the religion, politics, and social economics of pre-British India. His method is synthetic and psychological, and tends to depreciate a strictly analytic and archaeological treatment of the subjects under investigation. The dangers and pitfalls of his plan are many and great, and, if he has not escaped them entirely, he has at least produced a coherent and well-balanced account of India as it might have been prior to A.D. 1600. Though the exact political history of India begins about B.C. 600, he boldly goes back to the second millennium B.C.

In official publications it is candidly admitted that the foundations of the present political system in India are not rooted in the past, and Mr. Havell's history goes far to justify the view that this divorce of the present from the past has done serious harm to India's progress. It is impossible to foresee what changes will result from the Montagu-Chelmsford

report; but it is, at any rate, idle to pretend that all of these will be a purely natural development of the existing system. They will inevitably involve in some degree a retracing of our steps, a turning back to some of the ancient ways and signposts marked out in Mr. Havell's book. India has been an invaluable training ground for British administrators: it has never yet been a school of statesmanship, largely because of the inveterate assumptions that India had never known traditions and methods of representative government, and that literacy, in the European sense of the term, is the only adequate qualification for the exercise of political rights.

Mr. Havell's thought has been partly shaped by the present war, which affords him some grim opportunities to contrast modern European with Indo-Aryan civilization. On one point he is certainly right: the part played by India in the war is not a mere tribute to the splendid results of British rule; it has a far deeper significance than that. The key-note of his work is that in Indian history politics cannot be separated from religion, and on this note he concludes with the pious aspiration that by British rulers of India, and by all statesmen, politics may come to be a religion rather than a game of craft and skill.

It is evident that Mr. Havell's work is in the nature of a *Vox Clamantis*, but peradventure some will hear and appreciate his message. His book is well illustrated, and has a good index. A more definite and detailed chronology, such as is given in V. A. Smith's "Early History of India," would have been useful to readers who are not professed Orientalists.

CLASSICS.

The New Latin Primer. By J. P. POSTGATE and C. A. VINCE.
(2s. 6d. Cassell.)

After thirty years, Dr. Postgate has revised "The New Latin Primer." In outward form it is the same, but within nearly every page contains some change for the better. There is a slight increase of three pages in the old portion of the work, but a new portion of twelve pages at the end contains an index of verbs and a general index, both valuable additions. The changes are mainly in the type, the arrangement of details, and in grammatical restatements. The two former add very greatly to clearness, but we regret that the verb paradigms and some others are printed across the page, as the constant turning round of a book is a nuisance, and the necessity for it should have been avoided. Some of the noun paradigms are changed: *exercitus* and *genu* replace *portus* and *veru*, perhaps with advantage; but why *haedus* instead of *dominus*? The declension of *vir*, *miser*, *piger*, *alter*, *alius*, *respublica*, *quis*, *aliquis*, and *quidam* are all given more fully. *Hortor* as a deponent is conjugated in full, but a note should have been added as to the conjugation of deponents in other conjugations. The third declension is rearranged under the three headings Parisyllabic, Originally Parisyllabic, and Imparisyllabic. The supine is now allowed to be either ablative or dative, the classification of the perfect and of the supine is improved, and some verbs which were previously omitted, such as *venio*, *pungo*, *labor*, *morior*, *reor*, now have their principal parts given. The list of principal parts has been gone over carefully in every detail, and the only oversight we have observed is the insertion of *comperio* twice (on pages 143 and 145). In the syntax, among points that are entirely new or are improved are: on page 72, the use of the complements; page 84, the subdivisions of the instrumental ablative; page 94, the definition of the subjunctive; page 95, the treatment of requests and prohibitions; page 96, the subdivision of substantival clauses; page 106, the treatment of clauses of place, manner, time, &c.; page 169, the use of *do* and *curo* with the gerundive; and, page 192, questions in the *oratio obliqua*. Enough has been said to show that "The New Latin Primer" has renewed its youth. It is no doubt too, with peculiar satisfaction, that Dr. Postgate can say, on page 5, that the "Native 'English' pronunciation of Latin is now dying out rapidly." In conclusion, a few corrections may be suggested. On page 2, the *e* of *poeta* should be marked long; page 25, *citerior* and *citimus* should be added; page 35 (bottom), *only* is misplaced; page 64, a note is required on the regular forms of *edo*; page 68, *quando*, "when?" should be added to section 100; page 105, the subjunctive in "Misit Hirtium qui vera nuntiaret" seems more akin to "desire" than to "cause"; page 129, *hospes* should be omitted; page 154 (bottom), is *nobis* really an indirect object? and, page 164, *eligere* should give place to *eligere*.

(Continued on page 242.)

TUITION BY POST.

Practical Training in

SHORTHAND,

BOOK-KEEPING AND ACCOUNTANCY,

COMMERCIAL PRACTICE, BANKING,

ADVERTISING, COMMERCIAL LAW.

PITMAN'S POSTAL COURSES are admirably adapted for teachers who are unable to take advantage of the ordinary facilities for receiving oral instruction, but desire to qualify in commercial subjects. Each lesson is a full exposition of that part of the subject covered. One course, or any group, may be commenced at any time, and from any stage of present knowledge.

Write for details, stating the subjects in which you are interested.

PROF. E. LEBONNOIS, 16 AVENUE DE CREULLY, CAEN.

P. Papini Stati Silvae. Recognovit brevique adnotatione critica instruxit J. S. PHILLIMORE. Editio altera correctior. Scriptorum classicorum bibliotheca Oxoniensis. (3s. 6d. Clarendon Press.)

Twelve years have passed by since Prof. Phillimore first edited *Statius* for the Oxford texts, and in the meantime much work has been done—among others, by Mr. Garrod and Prof. Postgate—which has made a fresh revision of the received text almost imperative. In doing this, Prof. Phillimore confesses frankly that he has come to attach an increasing importance to the conjectures of Markland; but on the main question as to whether or not the *Codex Matritensis* is the unique source of all our MSS. he maintains a wise attitude of *εὐχῆ*. We congratulate him upon the completion of his labours of revision, and once more tender to the Oxford Press the grateful appreciation of all scholars for this excellent and inexpensive series of texts.

The Neo-Platonists. By THOMAS WHITTAKER.

Second Edition. (12s. net. Cambridge University Press.)

In this second edition of his work (originally published in 1901) Mr. Whittaker has added to his detailed account of the growth and development of Neo-Platonism a copious appendix—eighty pages in length—upon the commentaries of Proclus. The majority of classical schoolmasters will find Mr. Whittaker's work somewhat beyond them—and, indeed, it is not intended for such; but now that improved texts of Proclus have been available for some years they will be grateful for Mr. Whittaker's exegesis as providing them in brief with what the somewhat verbose Proclus has to say about any dialogue of Plato's which they may from time to time be reading with their classes. Of the four dialogues—First Alcibiades, Parmenides, Timaeus, and Republic—upon which Proclus commented, the "Republic" is the chief one likely to be read in schools; but it may perhaps be mentioned in passing that for the elucidation of the "Parmenides" we consider Mr. A. E. Taylor's well-known articles in *Mind* far more helpful than either Proclus or Mr. Whittaker. But the commentary upon the "Republic"—especially that part which deals with the Myth of Er—will prove very useful to all who stand in need of such exposition. There are many illuminating things, as, for example, the explanation of why women are admitted to public life in the "Republic," but not in the "Laws," by the fact that there is private property in the latter, but not in the former, and women are admittedly incapable of preferring the public good to that of individuals. Shall we be thought unpatriotic if we add that the paper upon which the book is printed is worthy neither of Mr. Whittaker's work nor of the Cambridge Press?

ENGLISH.

English Prose from Bacon to Hardy. Selected and edited by E. K. BROADUS and R. K. GORDON. (6s. net. Oxford University Press.)

The new anthology justifies its existence by the special aim of its compilers. It is something quite different from "The Pageant of English Prose," for instance, already published by the Oxford University Press; for it is neither a collection of famous passages nor an anthology of "beauties"; nor does it attempt to include all the great writers within the chronological limits fixed. What it presents is a selection of "characteristic" specimens of successive periods to assist the student in tracing the development of prose from the Elizabethan period to the present day. There are some striking omissions deliberately made, for they are frankly mentioned in the preface: "De Quincey, Landor, Newman, Pater, and others have not been given, because, by reason of style or subject, they can hardly be considered as representative figures." This is a startling statement to make of writers so illustrious and so important in their influence. But, if these gaps are serious drawbacks to the representative character of the selection, there are some sides on which it is distinctly strong. The eighteenth-century letter-writers are liberally illustrated as well as the essayists, and the excerpts from novelists are on so generous a scale that the book will make a useful companion to college courses on the history of English fiction. Eighteenth-century novels were not written for boys and girls, and some passages included here could not be read in schools. The omission of Charlotte Brontë from the novelists is curious. But, whether one agrees with them or not, it is a satisfaction to recognize editors who have an independent point of view. To the competence of these editors the little introductions prefixed to the extracts are sufficient testimony.

Cambridge Readings in Literature. Edited by GEORGE SAMPSON. (Book I, 3s. 6d., 4s. 3d., 5s.; Book V, 4s., 5s., 6s. Cambridge University Press.)

These delightful volumes may be said to represent the kick of the natural man against our modern attempts to make the study of English literature scientific by mapping it out into schools and

T. Nos., Central 621 and 12030.

periods. Not that these attempts are wrong; they are necessary if the study of English literature at school and University is to be a real mental training, such as the study of Greek and Latin has been in the past; and assuredly every lover of our literature who has given himself this training would deny that the discipline had spoilt his enjoyment; would assure us, on the contrary, that it had heightened his appreciation. But that other ideal of the "amateur" (who is a lover, too, as etymology reminds us) has its value, and many of those for whom literature has done most have simply "browsed in a library," and not followed any settled plan at all. It is good for the teacher to try this plan when the other fails, and to try it with everybody at times; and where the ideal library is not accessible, here is a veritable library, full of the most various attractions, within the covers of a few volumes. Mr. Sampson has selected his good things with admirable taste. They belong to all periods, from Malory to Masfield. They range from short lyrics to "The Ancient Mariner" and from brief paragraphs of Plutarch to Dr. John Brown's "Marjorie Fleming." Some guidance in appreciation is afforded by brief introductions; and, by a most happy thought, the books are illustrated by reproductions of famous pictures, often chosen with great aptitude. The volumes are produced in three styles, all attractive; the best of them, as it is the most remote from a school book, should tempt the general reader.

Childe Harold's Pilgrimage. Edited by D. FREW.
(2s. Blackie.)

The editor very wisely says that school editions are often defaced by unjust depreciations of Byron; and it would be well to remind the schools that on the continent Byron's fame has always shone bright. The "Pilgrimage" cannot die, and, though it may seem a heresy to hint it, the stanza, borrowed from its great inventor, seems more flexible than it was in Elizabethan days. What a pity it was that no more songs were inserted in this great poem, to which, indeed, "The Isles of Greece" properly belongs. But the purple passages, as in Spenser, are numerous, and Byron draws. The notes are full; we should like a longer introduction.

Spenser's Faery Queene. Book II. Edited by W. K. LEASK.
(2s. Blackie.)

Enough is here given to help the school to read Spenser; but it would be an interesting question to ask teachers whether or not they

find Spenser a favourite writer. The purple passages appeal to all; and the second book contains the immortal description of Mammon; but how is Spenser best to be treated with a class? We should have liked to hear the editor's opinion.

ITALIAN.

A Short Italian Dictionary. By ALFRED HOARE. Vol. I: Italian-English. (9s. net. Cambridge University Press.)

Mr. Hoare's short dictionary appears to be excellently adapted to its purpose. The shape and size of the book are convenient, the print good and clear, while the marking of stress in the Italian words should be of considerable use to the beginner, especially to any one who is thrown on his own exertions. The lists of verbs are useful and sufficiently comprehensive. It would be unreasonable to expect in the compass of this dictionary a guide to the complete historical value of words, and a student reading eighteenth-century Italian may find verbs then used actively only quoted intransitively, while on the other hand many idioms cited in the dictionary are of quite recent growth. But an intelligent reader will find practically everything he needs in a convenient form for improving his acquaintance with the modern language.

MISCELLANEOUS.

Whitaker's Almanack, 1919. (6s. net.)

"Whitaker's Almanack" costs more in these days, but it is worth more. Publication has this year been postponed in order that the results of the December elections might be included, and this has enabled corrections to be made to a later date than usual. No school library is complete without a copy of this invaluable annual. We cannot imagine an up-to-date teacher being able to do without it. In addition to being one of our most useful works of reference, it is certainly one of the most interesting.

Everyday Stories to tell to Children. By Mrs. H. C. CRADOCK.
(5s. net. Harrap.)

These stories will appeal to young boys and girls of nursery age. Mrs. Cradock knows little people thoroughly, and parents and nurses may tell her tales to their young charges in the sure and certain hope that they will be amused, interested, and improved. Each story quite unobtrusively teaches some lesson of courtesy, obedience, gentleness, or other virtue. The book is sure of a wide popularity.

(Continued on page 246.)

TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

OFFICIAL LIST

OF

REGISTERED TEACHERS.

The Statutory duty of the Council is to frame and keep a Register of Teachers, and a list of those registered under the conditions prescribed by the Council will be published from time to time. The first list was issued in 1917, and the second one is now in course of preparation.

In addition to its statutory duty, the Council has acted in co-operation with the Board of Education in many important matters affecting the interests of Teachers.

Up to and including Thursday, the 27th February, 1919, the number of applications for admission to the Register was 25,410. All qualified Teachers who have not already registered should write at once to:—

THE SECRETARY,
TEACHERS REGISTRATION COUNCIL,

47 BEDFORD SQUARE,

LONDON, W.C. 1.

The Feminine in Fiction. By L. A. M. PRIESTLY.
(2s. 6d. net. G. Allen.)

Now that women have, through success and failure, through good report and evil report, at last achieved political power, they are able, even the most militant of them, to look back upon the long struggle with a certain degree of detachment. This is the prevailing note of these pleasant sketches, in which British fiction of the last sixty years or so has been drawn upon to illustrate some of "the processes which have preceded the emergence upon the stage of the woman citizen." The disabilities of women, as illustrated in about eighteen well known tales, receive impressive emphasis in these pages.

Woman: A Citizen. By A. E. METCALFE. With Preface by Mrs. SIDNEY WEBB. (2s. 6d. net. G. Allen.)

It is an unfortunate fact that some of the men who exercise the franchise do so with more zeal than knowledge, and some with neither zeal nor knowledge. The object of this book is to try to make sure that the new class of women voters shall not at any rate lack knowledge. A useful sketch is given (quite as useful to men as to women) of the duties of the central government—legislative, executive, and judicial, and also of the duties of local government. By the time this notice is published the immediate occasion of the book will have passed away, but it will remain useful still.

A Complete System of Nursing. By MILLICENT ASHDOWN. (Dent.)

Miss Ashdown is to be congratulated on her very capable book, and it is one to be recommended to all nurses and to all households. For therein one really does find all that it is necessary to know, and it is placed before one in a direct and practical way, exhaustive without being in the least exhausting. The instructions are a real pleasure to read, and the matter is properly indexed. Once the public realize that this book exists, there should be a large demand for it.

The Modern Office. By JAMES STEPHENSON. (4s. 6d. Methuen.)

This expensive little book contains some excellent chapters, and others that cause one to wonder why they are included. It falls into the common error of trying to teach too much. All the qualifications necessary for the occupant of a modern office cannot be inculcated in one small volume; something must be assumed on entry, some of the developments at the other end must be left for later

treatment; for instance, Writing and Composition in the one group, Customs and Excise in the other. Letter-writing, as distinct from the subject-matter of the letters, looms somewhat large, and perpetuates phrases that are disappearing from the correspondence of firms employing a good type of educated clerk. Neither correspondence nor credit documents have intrinsic value; they are merely means to an end. It is easy for a pupil to appreciate their qualities if he first realizes the need for them; hence they are best discussed in connexion with transactions; they are part and parcel of the machinery of commerce, and their discussion apart from commerce is scarcely educational. The examples of a Bill of Exchange and a cheque on pages 58 and 59 are likely to give a wrong impression to the uninitiated. These documents are seldom printed, so as to allow a clear space for acceptance and crossing. The chapters on the modern office, its arrangement, fittings, books, are excellent, as are those on posts and the post office; the appliances seem to merit somewhat more space than has been given them; the short paragraphs provoke the question: What else can this thing do? The book is a step forward in a region that demands attention and careful development.

MUSIC.

Dances and Songs of Many Lands. Edited by Mrs. C. W. KIMMINS. (Evans Bros.)

The founder of the Guild of Play here provides a compilation of wide scope breaking fresh ground. It comprises the peoples' dances in many lands, Alsatian, Italian, Flemish, French, Russian, Roumanian, Serbian—the unique Serbian star dance; it represents many times, from traditional dances, going back to ancient ritual of season and man's primitive activities, and old time dances of the different parts of our island country to a modern dance of American children popular on the roof playgrounds of New York. The illustrations which accompany the detailed instructions are alluring in their presentation of suitable costumes characteristic of many lands and ways.

The Fools and the Fairies, from A Midsummer Night's Dream. Arranged by PERCY A. SCHOLDS. Music by MARTIN SHAW. (3s. 6d. net. Evans Bros.)

Here is a beautiful and delightful musical play for schools. It contains, in Shakespeare's own words, all of the play that pleases

(Continued on page 248.)

BLACK'S FIRST FRENCH COURSE

PETIT COURS PRÉPARATOIRE. By L. H.

ALLISON, Organizing Mistress in Modern Languages to the West Riding Education Committee. A two-term course, in phonetic transcript leading up to the *Première Année*. May be used independently. Containing Frontispiece in colours, several black and white illustrations, and line drawings in the text. Price 2s.

40 Copies.

Kron's French Daily Life. 1904. 30 Copies.

School World, Vols. 2, 3, 6. Any parts.

Mr. JOHN DAVIS (Successor to Mr. Thomas Laurie),
13 Paternoster Row, E.C.4.

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Rice, 8 Ludgate Broadway, E.C.4." Each must contain sufficient loose stamps to cover postage on to advertiser. Post cards will NOT be sent on.

young people and omits the love-making that bores them. There is plenty of solo music and of two-part choruses and dancing. The incidental music is tuneful and fresh and sometimes captivating. The cover and contents pages are decorated with Shakespeare's life in vignette pictures framed by scrolls of some famous quotations. The words and voice parts are issued for convenience separately, at 1s. net, with similar pictorial appeal on its first two pages. Nothing has been neglected that can help to awaken interest and quicken young imagination.

PRIZE COMPETITIONS.

THE winner of the Translation Prize for February is Miss Alice M. Webb, 7 Scarsdale Villas, Kensington, W. 8.

The Translation Prize for March is divided between "Ardax" and "Boy."

THE REAPERS.

Once more they have taken up the scythe, they who left their wheatfields for the field of battle, leaving the harvest standing; but it is no longer in the wide and golden light of day that they lay low their sheaves. In the depth of the trench they await the coming of night to sally forth; and their harvesting is to clear away from the glacis the grass that screens enemy attacks. They come out. Caught in the network of fiery threads, they must at almost every step free from their legs a tangle of barbed wire. Now they are in a clear field. A patrol advances before them to protect them, and, deploying in a semi-circle, crouches down in the grass, weapon ready to hand, eyes piercing the darkness.

The reapers, afoot, unarmed, take up their old and peaceful task. No song cheers them. In the darkness between the lines their scythes sound like the rustling of silk. In front of them, alert and ready, the enemy has heard them. Bullets graze by them, without giving pause to the rhythmic falling of the grass. A rocket soars, bathing the glacis with the light of a Feast of Lanterns. The reapers cast themselves down on the earth. Some

have not time for this, and remain, bending forward, afraid lest one movement more should betray them. Anxiously all eyes follow the star of blue lights from the rocket, falling, infinitely slowly.

ARDAX.

The piece set for translation stands alone in Levis Mirepoix, a thing complete in itself. It is a highly finished little sketch, an admirable example of the pen-picture which affects the feelings without the use of a single word expressive of emotion. The difficulty in translating such a piece is to catch and maintain the right tone. Colloquialisms such as "No Man's Land," "go over the top," "to negotiate barbed wire" are entirely out of place, as is such a technical term as "Vérey light"—even "star shell" and "surprise attack" jar. Brevity is essential. The versions by "Ardax" and "Boy" best fulfil the necessary conditions. The former version is the best piece of writing, and for this reason we publish it; but it contains two curious mistakes, due apparently to misreadings of the text: "fiery threads" for *fil de fer*, and "alert and ready" for *tout prêts*. "Boy's" translation has no bad mistake, and is not far behind the other in point of style. We have therefore decided to divide the prize.

The extract was one that it was easy to translate tolerably well, but difficult to translate very well; hence the abnormal size of the second class. Some candidates may be reminded that there are no "shadows" on a dark night, and that "net-works of spikes," "meshes of sharp points," "coils of spikes," "skeins of barbs" are things which do not exist. *Ille reprérent l'ancien geste pacifique* was a crux. "Bend themselves again to the swing of the olden days of peace," "resume the familiar swing of the far-off days of peace" are good, but long.

We classify the 193 versions received as follows:—

Class I. (a)—Ardax, Boy, Dane, M.F.H., Primipilus, χρυσίον χαλκία, Rabbit, Playshaw, Sabrina, Rusticus Expectans.

(b) Territorial, Nibbidard, Post Time, Beaver, Bobs, Tom Turk, Montpellier, Louisiana, Sumach, Garnet, Somewhen, Sperata, Glenleigh, M.A., France d'abord, Priscilla, Bésigue, M.A.S., Chanteuse, Cléonte, Senex, H.W.C., L'Union.

Class II.—Dob, Esse quam videri, Janatone, Vanneau, Dormouse, (Continued on page 250.)

Class V.—Betty, Clarissa, Teufelchen.

A Prize of Two Guineas is offered for the best reproduction in French of the following extract from Robert Curzon's "Visits to Monasteries in the Levant":—

Towards the afternoon, as we were proceeding at a trot along a narrow ledge above a stream, the baggage-mule, whose halter was tied to the crupper of my horse, suddenly missed his footing and fell over the precipice. He caught upon the edge with his fore-feet, the halter supported his head, and my horse, immediately stopping, leant with all his might against the wall of rock which rose above us, squeezing my left leg between it and the saddle. . . . I was the last of the party, and I had the pleasure of seeing all my company trotting on, unconscious of anything having occurred to

check their progress towards the journey's end. It was so bad a day that no one thought of anything but getting on. Every man for himself was the order of the day. I could not dismount, because my left leg was squeezed so tightly against the rock that I every moment expected the bone to snap. . . . There we were—the mule's eyeballs almost starting out of his head, and all his muscles quivering with the exertion. At last something cracked; the staple in the back of my saddle gave way; off flew the crupper, and I thought at first that my horse's tail had gone with it. The mule made one desperate scrambling effort, but it was of no use, and down he went, over and over among the crashing bushes far beneath, until at length he fell with a loud splash into the waters of the stream. Some of the people, hearing the noise made by the falling mule, turned round and came back to see what was the matter, and, horse and men, we all craned our necks over the edge to see what had become of our companion. There he was in the river, with nothing but his head above the water. With some difficulty we made our way down to the edge of the torrent. The mule kept looking at us very quietly till we got close to him, when the muleteer proceeded to assist him by banging him on the head with a great branch of a tree, upon which he took to struggling and scrambling; and, at last, to the surprise of all, came out apparently unhurt—at least, with no bones broken. The men looked him over, gave him a kick or two, by way of asking him how he was, and then, placing his load upon him again, we pursued our journey.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on April 11, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C.4.

Posts Wanted—continued.

KENT EDUCATION COMMITTEE.

The Committee invite applications for the under-mentioned posts:—

Application forms, which must be returned by Saturday, the 26th April, may be obtained from the undersigned on receipt of a stamped addressed envelope. Three testimonials only, of recent date, to be submitted, with the names of not more than two referees who have personal knowledge of the applicant.

(1) **TWO INSPECTORS**, to visit and report upon all types of schools in the county, and to assist generally in the Committee's administrative and organizing work. The Committee look for persons of liberal education and administrative ability, well qualified as regards both academic attainments and teaching experience.

Each Inspector will be required to undertake such duties under the Director as may from time to time be assigned by the Education Committee. In allocating specific duties, due regard will be had to the Inspector's special qualifications and experience.

Initial salary from £500 to £600 a year, according to qualifications and experience.

(2) **COUNTY JUVENILE EMPLOYMENT OFFICER**. The person appointed will be required to act under the Director as Executive Officer for Juvenile Employment, to organize the work connected with the new County Scheme under the Education (Choice of Employment) Act, 1910, and to perform such other duties as may be assigned by the Committee. Candidates should be well educated, experienced in social work, and have knowledge of industrial conditions. Previous experience of juvenile employment work desirable.

Initial salary £350 to £450 a year, according to qualifications and experience.

E. SALTER DAVIES,

Director of Education.

Sessions House, Maidstone.
21st March, 1919.

ASSISTANT MASTERS and **LADY MATRONS** and **HOUSEKEEPERS** for Schools.

TRUMAN & KNIGHTLEY, Ltd.,

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over Schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the transfer of Schools, and is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

Interviews will be arranged by appointment.

The following are selected from several Schools the sale of which Messrs. TRUMAN & KNIGHTLEY have been instructed to negotiate:—

GIRLS' SCHOOLS.

SOUTH COAST.—Old-established School. 73 boarders, paying fees from 60 to 80 guineas per annum, exclusive of extras. First-rate modern premises, specially built for their purpose, standing in large grounds. Gross receipts between £5,000 and £6,000; net profit between £700 and £800 per annum. Capitalisation accepted for goodwill; furniture at valuation. Premises will either be let or sold.—T 2905.

SOUTH-WEST SUBURB OF LONDON.—Flourishing Day School. 117 day pupils, paying from 6 to 15 guineas per annum, exclusive of extras; 6 boarders, paying £55 to £65 a year, exclusive of extras. House specially built for School, with large garden and gymnasium. Gross receipts nearly £1,800. Rent £85 a year. Goodwill, £600. Furniture at valuation. Part of purchase money could be paid off by instalments.—T 2920.

SURREY.—High-class Day School in first-class residential neighbourhood, with accommodation for boarders. Present Principal taking her boarders to the sea. She will leave between 40 and 50 day pupils, paying from 15 to 18 guineas per annum, exclusive of extras. Excellent house, grounds of 5 acres, the property of the Principal, well adapted for its purpose, with accommodation for 20 boarders—laboratory, large gymnasium, &c. One term's capitation fee accepted for connexion. A certain amount of school furniture at valuation.—T 2678.

NORTH - WEST COAST.—Old-established School. 40 boarders paying from 75 guineas per annum, and over 50 day pupils. Work up to University standard, with Domestic Science branch. Two houses standing in an acre of ground at a combined rent of £380 a year. Receipts over £4,000; net profit from £700 to £800 per annum. One term's fees for goodwill; furniture at valuation. Part of the purchase money could be paid off by instalments.—T 2241.

NORTH-WEST OF ENGLAND.—Old-established Boarding and Day School. 21 boarders, paying from 80 to 90 guineas per annum, exclusive

of extras; 110 day pupils paying from 9 (in the Kindergarten) to 24 guineas per annum, exclusive of extras. The premises, which are the freehold property of the Principals, are large and stand in their own grounds on sandy soil, and are especially adapted for school purposes; separate Domestic Science School; central heating. Premises could be bought, or let at £250 a year. Gross receipts nearly £4,400; average net profit over £500 after allowing for rent. Goodwill, £1,000; furniture at valuation. Part of the purchase money could remain on mortgage.—T 2970.

MIDLAND CITY.—Principals of a large high-class Day and Boarding School wish to move to the sea with their boarders, and dispose of their day connexion, comprising 270 pupils at fees from 9 to 15 guineas per annum, exclusive of extras; boarders pay from 60 to 65 guineas per annum. The school is well organized, and has a high standard of work. The premises are commodious, and fitted throughout with every appliance for carrying on a large modern school; large gymnasium, beautifully fitted with Swedish apparatus; also Housewifery school. Gross receipts from the day pupils alone amount to nearly £3,000 a year. Capitalisation accepted for pupils taken over; furniture at valuation. Part of the purchase money could be paid off by instalments. Excellent opening for two University women.—T 2949.

N.W. OF ENGLAND.—High-class Day School, quite full with 160 pupils paying from 7½ to 13 guineas per annum, exclusive of extras. School carried on in large house, with hard tennis court adjoining, containing 7 large school rooms, 1 smaller class room, and 4 rooms used as music rooms. Rent £100 per annum. Gross receipts for the last year, £2,356. 13s. 10d.; net profit, £862. 1s. 10d. The low price of £400 accepted for goodwill; furniture at valuation.—T 2977.

SOMERSETSHIRE.—Principal of high-class Church of England Boarding and Day School wishes to move nearer London with her boarders, and to dispose of her day connexion, comprising

between 40 and 50 pupils paying £14 to £26. 10s. per annum, exclusive of extras. School carried on in two houses intercommunicating, with large school hall built on, standing in own grounds with ample facilities for games. Gross receipts from day pupils over £1,000 a year, which more than covers expenses. £350 down accepted for goodwill; furniture at valuation.—T 2502.

SOUTH COAST.—Old-established Boarding and Day School. 46 boarders at fees of £105 per annum, with extras, and 20 day pupils paying 15 to 21 guineas per annum, exclusive of extras. House, standing in grounds of an acre, the property of the Principal, who will sell, or let at £350 a year. Gross receipts over £4,000 a year; net profit about £800. £2,500 accepted for goodwill, furniture, and fixtures. A well qualified teacher would be received as Head Mistress at a salary of £150, with a view to early partnership and ultimate succession.—T 1069.

YORKSHIRE.—Boarding and Day School for Girls in inland health resort. 39 boarders paying 42 to 51 guineas per annum, exclusive of extras; 52 day pupils paying 9 to 15 guineas per annum, exclusive of extras. Premises rented at £150 per annum. Gross receipts nearly £2,395; net profit, £564. Goodwill, £1,000; furniture at valuation. Principal would accept £800 paid down, balance by instalments.—T 2947.

NORTH-WEST OF ENGLAND.—High-class Boarding and Day School. 10 boarders, paying 75 to 90 guineas per annum, exclusive of extras; 9 day boarders paying 21 to 27 guineas, and 23 day pupils paying 12 to 18 guineas per annum, all exclusive of extras. Detached house in one acre of ground, with accommodation for 12 boarders and 35 day pupils; recently redecorated, electric light installed, and put in first-class order. Gross receipts nearly £2,000; net profit, £600. The Executors of the late Principal willing to negotiate with a suitable successor able to pay down from £300 to £400.—T 2963.

BOYS' SCHOOLS.

WEST OF ENGLAND.—First-class Preparatory School for Boys, full with 46 boarders paying fees of 100 guineas, exclusive of extras. Freehold premises specially built for their purpose, and equipped with every modern convenience, standing in grounds of ten acres, 800 feet above sea level. Average net profit last three years, £1,475. £12,000 for premises, goodwill, school and dormitory furniture, and equipment. £6,000 paid down.—T 2829.

SOUTH COAST.—Preparatory School, over-full with 32 boarders paying on an average £84. 15s. 6d. per annum each, and 7 day boys paying about £20 per annum each. Premises recently specially built for their purpose, standing in grounds of 7 acres, on one of the finest sites in the South of England. Gross receipts over £3,000; net profit last year, £1,496, after paying ground rent and mortgage interest. Premises so constructed that

a wing could be added to provide further accommodation. £6,400 for the entire premises (leasehold for 87 years), goodwill, and furniture. Mortgage of £1,200 at 4½ per cent. could be transferred.—T 2931.

KENT.—High-class Preparatory School, containing 28 boarders paying from £105 to £120 per annum, exclusive of extras. Premises, specially built for their purpose, in grounds of 8½ acres in a very healthy situation, provide accommodation for 34 boarders. Average gross receipts about £3,000; net profit, after allowing for rental value, about £750. Premises, £6,500, of which £4,000 could remain on mortgage; goodwill and school furniture, £2,000.—T 2967.

MIDLANDS.—Day School for Boys. 50 pupils paying from 12 to 15 guineas per annum, exclusive of extras; accommodation for a few boarders

if required. Gross receipts, £630; net profit, £370. Goodwill and school furniture, £620.—T 2872.

NORTH-WEST COAST.—Old-established Day and Boarding School. 71 day pupils paying from 6 to 15 guineas per annum, exclusive of extras, and 19 boarders paying from 45 to 57 guineas per annum, exclusive of extras. Gross receipts nearly £2,000; net profit, £481. Goodwill, £800 school and household furniture at valuation.

NORTH OF ENGLAND.—Old-established Day School for Boys, containing 105 pupils paying 9 to 15 guineas per annum. Large house in grounds of half an acre, with room for 12 boarders in addition to day pupils. Gymnasium. Rent £170 per annum. Gross receipts £1,590; net profit, £549. Goodwill, school furniture, and gymnasium, £1,200.—T 2909.

THE BERGMAN ÖSTERBERG PHYSICAL TRAINING COLLEGE, KINGSFIELD, DARTFORD HEATH, KENT.

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
The Marchioness of SALISBURY.
Major the Hon. WALDORF ASTOR, M.P.
The Rt. Hon. CHRISTOPHER ADDISON, M.P.
The Rt. Hon. Lord SHAW OF DUNFERMLINE.

Principal:

Miss H. C. GREENE.

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared as teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in **October**. Further particulars may be obtained on application to the **SECRETARY**.

BERGMAN ÖSTERBERG UNION OF TRAINED GYMNASIAC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—**PHYSICAL TRAINING COLLEGE, KINGSFIELD, DARTFORD HEATH, KENT.**

Gospel of St. Mark. By the Rev. F. MARSHALL, M.A. Maps of Palestine, Sea of Galilee, Galilee, Jerusalem, Environs of Jerusalem, Temple; Special Introduction.

Acts of the Apostles. Part I, Chapters i-xvi. By the Rev. F. MARSHALL, M.A. Specially prepared for Students taking the first part of the Book. Complete for the purpose, with Geographical and Biographical Notes, Maps, and Introduction.

As You Like It. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. 256 pp., Cr. 8vo.

Henry V. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Maps and Genealogical Tables. 256 pp., Cr. 8vo.

Richard II. By STANLEY WOOD, M.A., and Rev. F. MARSHALL, M.A. With Illustrations and Genealogical Tables. 232 pp., Cr. 8vo.

— READERS. —

Gods and Heroes; or, Greek Fairy Tales. By P. C. SANDS, M.A., late Fellow of St. John's College, Cambridge. This is a reader intended for use in the Lower Forms of Schools. It gives a splendid initiation into the stories of ancient Greek mythology. With numerous illustrations. Cr. 8vo, 128 pp., Cloth, 1s. 3d.

La Guerre, A.D. 1914. With notes on idiomatic phrases, by TAYLOR DYSON, M.A. A selection of leading articles on the Great War taken from the French and Belgian newspapers and arranged as a book for French Unprepared Translation for Middle and Upper Forms. Cr. 8vo, 128 pp., 1s. 3d.

La Guerre, Vol. II. A sequel to La Guerre, A.D. 1914. By TAYLOR DYSON, M.A. 1s. 3d.

ATLAS AND NOTES ON EUROPEAN HISTORY.

From the time of DIOCLETIAN to the outbreak of the GREAT WAR, 1914.

By HARTLEY FUDGE, M.A. 1s. 6d.

"The book consists of 36 Coloured Maps, not too full of names, and 104 pages of Notes, so called, which, however, practically form a précis of the history of Europe, from Diocletian to the Congress of Vienna. The author then carries forward history to the outbreak of the present War, by dealing separately, but still chronologically, and ab initio, with the history of Poland, France and Alsace-Lorraine, Prussia and German unity, the Dual Monarchy, Ottoman Empire, the Near East, and the like. The whole forms a small reference book useful for History teaching."

Journal of the A.M.A., Dec., 1918.

"In the body of the book there are more than thirty maps which, for the clearness of their lettering, we have very seldom seen excelled. Taken as a series they enable us to trace without confusion, through the centuries, the various stages in the political development of Europe."

Irish School Weekly.

SCHOLASTIC APPOINTMENTS

University Men and Women seeking scholastic appointments should apply to

Truman & Knightley
—SCHOLASTIC AGENTS—LTD—

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

Through this Agency, well educated gentlewomen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions pleasant, and the holidays are long. Salaries range from £50 to £100 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student and Junior Mistresses at salaries of from £30 to £50 per annum with board and residence.

There is a separate department for
LADY MATRONS and HOUSEKEEPERS
for schools.

No charge for registration.

::

Moderate commission.

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

Offices: 158-162 OXFORD ST., LONDON, W.1

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 1136.

PHYSICAL TRAINING, REMEDIAL GYMNASTICS, &c.

THE INCORPORATED GYMNASIAC TEACHERS' INSTITUTE.

(Founded 1897.)

Offices: 25 CHALCROFT ROAD, LEE, LONDON, S.E. 13.

9 Brunswick Square, W.C.1.

UNIVERSITY OF GRENOBLE (FRANCE).

Holiday Classes,

July 1 to October 31.

In 1914 there were **657** Foreign
Students.

COMPLETE Practice in Reading
and Speaking (groups of 6), Lectures
on French Language and Literature,
Practice in Translation and French Com-
position (groups of 25).

Railway fares half price. Family
boarding-houses 200-400 frs. a month.

Excursions every week in the mountains
of Dauphiné, to the towns in the valley of
the Rhone, Winter Sports, and Mountain-
climbing.

More detailed information sent free on
receipt of demand addressed to the

Comité de Patronage des
Étudiants Étrangers.

GLAMORGAN COUNTY COUNCIL.

SUMMER SCHOOL AT BARRY, 1919.
Director—Mr. A. SUTCLIFFE.

The FOURTEENTH SUMMER SCHOOL
for Educational Handwork, Art, Welsh, Nature
Study, Hygiene and Physical Training for Men and
Women, Plain Needlework, Art Needlework, Dress-
making, Practical Geography, Gardening, Book-
binding, &c., will be held at the County Schools,
Barry, from July 28th to August 23rd, 1919.

A Camp for Women will be established in the
grounds of the Training College, Barry, which is
adjacent to the County Schools. This will enable a
limited number of students to spend a month under
canvass under pleasant and economical conditions.

Prospectus, together with application forms, may
be obtained from the Chief Education Officer,
County Hall, Cardiff.

Educational Handwork Association.

President: The Right Hon. A. H. D. ACLAND.
Secretary: Mr. J. SPITTLE, 16 Cambridge Rd.,
Huddersfield.

Annual Subscription, 2/6. Journal post free to
Members.

SUMMER SCHOOLS.

HANDWORK at { Scarborough.
Falmouth.
St. Anne's-on-Sea.

PHYSICAL TRAINING
at Scarborough.

From **JULY 28th to AUG. 23rd, 1919.**

Director ... Mr. J. TIPPING.
Superintendent of Physical
Training ... Mr. H. A. COLE.

Preparation for all Exams.

Hostel accommodation.

Prospectuses and full information may be ob-
tained as follows:—

Scarborough School.—Mr. J. TIPPING, 35
Lower Rushton Road, Bradford.

Falmouth School.—Mr. C. SEAMAN, 38 Vic-
toria Park Avenue, Cardiff.

St. Anne's-on-Sea School.—Professor
J. A. GREEN, M.A., The University, Sheffield.

SUMMER SCHOOL OF ITALIAN.

Girton College and Modern Language Association.

GIRTON COLLEGE, July 28-Aug. 16.
Open to Men and Women.

THE Programme will include:—

Classes in Italian, elementary and advanced.
Phonetic Demonstration and Practice.
Lectures in Italian and English on History,
Literature, Art, Music, Philosophy and
Present-Day Developments of Italy.

Inclusive charge for board, lodging, and tuition,
£8. 8s.

OCCASIONAL NOTES.

THE Board's Memorandum on the Staffing of Continuation Schools gives expression to unusually graceful sentiments, which are as safe as they are admirable. But what ironic spirit prompted the writer to quote Blake?—

Are we to have
Continuation
Schools?

I will not cease from mental fight,
Nor shall my sword sleep in my hand,
Till we have built Jerusalem
In England's green and pleasant land.

Truly, without passion nothing is accomplished; the contrast between the burning zeal of the poet and the pusillanimity of the Board is too painful to be missed. This is the first official utterance of the Board upon the subject of the continuation schools. Do they offer any sufficient extenuation for their present inaction, or any constructive proposals commensurate with the magnitude of the problem? The answer to both questions must, we fear, be in "the negative." The lay press have made much of the statement that the complete system will in three years' time require the services of 32,000 teachers, as no doubt they were intended to do. Though formally correct, the statement is in substance disingenuous. For Parliament, at the instance of the Board, has postponed the third year for a septennium, and has left the way open for the gradual introduction of the system by areas, or even by classes. The Board are still without a policy. To propose, as the Memorandum does, to leave the Local Authorities to experiment on a voluntary basis—throwing the reins on the necks of the horses, and not always willing horses at that—is not to have a policy. The more difficult the road the greater the need for skilful steering. There are areas, as there are industries, in which the conditions are more favourable than in the average. What is there to prevent the Board from selecting those

areas in consultation with the Local Authorities, and those industries after consultation with the employers' federations and the workmen's trade unions, and announcing the appointed day six months—or, if necessary, twelve months—in advance? Acts of Parliament notwithstanding, the prospects of the schools and of the children are prejudiced by every day's delay. It would be folly to minimize the task before the Board and the Authorities, but from the comfortable vantage-point of an office-chair difficulties are apt to "look bigger than what they be," like the lawyer's ducks in the Cornish proverb.

IN connexion with the question of school medical inspection and the Ministry of Health Bill, it should not be forgotten that, in 1908, when the functions of school medical officers were defined, the advisability of associating them with problems of public health were recognized. The Board of Education then pointed out that it was unnecessary to emphasize the objections to a dual jurisdiction in such matters as the sanitary control of school premises, and the notification and prevention of the spread of infectious diseases in which the duties of the medical officer of health and the school medical officer obviously overlap. And it was suggested that, if they are to be effectively carried out, the interests and activities of the school medical officer must extend over the whole environment of the child. School hygiene could not be divorced from home hygiene, and this in turn was intimately bound up with the hygienic conditions of the community. Consequently Local Authorities were requested to instruct their medical officers to supervise the new work, although its actual execution might be deputed. The clause under the new Bill, as originally drafted, authorized the transfer of all the powers of the Board of Education with respect to medical inspection and treatment to the Ministry of Health. Although objections to this provision were successfully resisted, an important addition has been admitted that may, to some extent, meet the difficulty of the situation. It is provided that for the purpose of facilitating the effective exercise of such powers arrangements may be made with the Board of Education respecting "the submission and approval of schemes" for medical inspection in schools, and the powers and duties of the Minister of Health may under such arrangements be exercised and performed by the Board on his behalf, and with his authority, under such conditions as he may think fit. It is a compromise, satisfactory as far as it goes, and its success or failure will depend upon the spirit in which it is interpreted.

A MEMBER of a Local Education Authority may well rise from the perusal of the scores of headings and sub-headings in the Board's draft memorandum of suggestions for the arrangement of schemes under the Education Act with "who is sufficient for these things?" on his lips. In an introduction to the Scheme proper each authority is to survey the geographical distribution of population and industries in its area; the existing educational institutions of all kinds are to be indicated; there are to be complete age statistics of the children and young persons for whom provision has to be made; the authority's administrative system, financial arrangements, methods of supervision, are to be described, not forgetting the necessary "stimulation" of parental

Schemes
under the
Education Act.

interest, and the dissemination of information as to the educational opportunities. In the scheme itself is to be formulated "a policy for the progressive development and organization of the educational provision of the area in relation to national as well as to local requirements." The programme is to cover ten years. The only considerable omission we have noticed amid an almost embarrassing wealth of detail is a reference to the part which private schools will have to play in not a few areas. As an *aide mémoire* the document has its uses, but we hope no authority will regard it as a plan which with a little adjustment here or there can be made to serve their turn, like those factory-made suits of clothes which are sold in America under the name of "semi-readies." Not in that way can a worthy house of education be designed and built.

THE education estimates for the year ending March 31, 1920, are of special interest; they mark the first occasion in the history of public education in this country upon which the State has entered into

The Estimates. a reasonably satisfactory financial partnership with those maintaining schools and institutions. When it was the design of authority to foster and encourage the voluntary supply of educational facilities, a system of carefully regulated grants-in-aid, although not calculated to produce a high standard of efficiency, was regarded as equitable. The real trouble began when, with the establishment of School Boards, supporters of voluntary schools found themselves in competition with those who could use the rates to supplement the Government subsidy. It was not considered necessary for primary education to be expensive. Even Matthew Arnold was convinced that the rate of cost per pupil ought not to exceed 35s. at the outside, and that it might be brought within that figure without loss of efficiency. He was genuinely alarmed by what he considered the unnecessary extravagance of School Boards; the sum of 55s. 11d., the inclusive cost of educating each child in Board schools in London, he found to be "astounding." We spend, he said, for each child more than France spends for two children, and the London School Board spends for each child more than France spends for three children.

IN the days when Matthew Arnold deplored the increasing cost of primary teaching, which he attributed to its moment of high favour and to the prosperity of the country, there were 3,154,973 children on the registers and the Government grant amounted to one million and a-half. The number of pupils has now approximately doubled, and the grants for elementary education for 1919-1920 are estimated at twenty-five millions. The increase over last year is something more than nine millions. This can only be regarded as the first instalment of the large additional investment in education to which the country is committed; we must believe that it will produce a satisfactory dividend. That it was high time for the claims of the profession of teaching to be more adequately recognized—and a very considerable proportion of the immediate increase in the Government grants will augment salaries—few will deny; and in so far as the addition to the estimates represents a more equitable distribution of the necessary burden as between rates and taxes, we have reason to be gratified. It must not be forgotten, however, that the

same individuals have to find the money, and it is only a difference of pockets! While there can be no defence for a system under which a Government department called the tune and expected a Local Authority to pay the piper, it would be no less unsatisfactory if an undue proportion of the expenditure were contributed by the central exchequer.

IN comparison with the addition in the estimates for elementary education, the provision for education other than elementary is not large. Grants for training of teachers are advanced from £422,200 to £516,800; secondary schools by only £222,090, and technical schools by £502,425. To these sums, however, must be added £365,000, the deficiency grant for higher education. The Board evidently anticipates a considerable development in the direction of Juvenile Employment centres, as the vote for technical schools includes £250,000 for that purpose. Pensions for teachers require £1,261,775, and half a million has been provided for the education of demobilized officers and men. The total of the estimates for the service of the Board of Education is £31,353,111, an increase of £12,243,406 compared with 1918-19. It is satisfactory to note the provision of a supplementary grant of £531,500 in aid of the maintenance of Universities and Colleges in the United Kingdom, and half-a-million for special grants in aid of certain Universities, Colleges, and Medical Schools.

STRIKES are in the air at present, and not for the first time the weapon of the strike has been adopted by the teaching profession. At the time of writing, the Rhondda Valley dispute is apparently being composed, whilst fresh trouble is brewing at Gosport and at Sunderland. Concerning strikes in general, we believe there is but one intelligent opinion—that they are just as deplorable as war itself, and just as avoidable if the right means were taken to avoid them. The Rhondda quarrel is being settled by the only hopeful means, and the pity is that those means did not commend themselves to both parties before brute force was even threatened. With the position of the underpaid teacher we have nothing but the completest sympathy; but on professional grounds we deeply regret a teachers' strike, not only because of its effects upon the pupils, but also because teachers, and all others who are responsible for the education of the people, should be able to see further into social and economic causes and effects than colliers and railway porters can be expected to see. We trust that the time is not far distant when such disputes will be settled by the civilized method of free and open discussion rather than by the barbarous method of the strike. Meanwhile we hope that, at any rate, teachers who are tempted to threaten a strike will first make sure that local public opinion is in their favour, so that they cannot justly be charged with selfishly holding up the rest of the community.

THE late Stephen Reynolds told us that one of his working-class friends said: "'Tisn't what you learns to school as helps 'ee, not wi' the likes o' us, so long as you can read an' write an' reckon a bit, an' speak up for yourself; 'tis experience—seeing life an' what 'tis

like, an' thee casn' see too much o' it too early. I tell thee, if you got to live your life wi' your nose to the grindstone, like most o' us has, the sooner you learns to put it there the better." It is to be anticipated that when the provisions further regulating school attendance, as required by the new Act, are in operation, there will be difficulty. But it is disappointing to learn that one of the first protests should come from the representative of a Trade Union Council on a Local Education Authority. He objected to a child being required to remain at school until the end of the term during which it reached the age of exemption. "The parents know perfectly well what is suitable for a child!" he said. This may be doubted, but it is quite clear that there will be general discontent unless the work in the upper divisions of elementary schools is so far modified or improved that parents are convinced that it is worth while for their children to continue their attendance.

WE welcome Mr. Henderson's appeal to the Government for a large and immediate increase in the Exchequer grants to Universities and University Colleges as an indication of the Labour Party's interest in higher education.

More State Aid for Universities.

That his letter to the *Times* of April 8 is somewhat misinformed as to the provision made in the Estimates for education of University standing does not minimize the pressing need for such further State assistance for higher education. Speaking as the Secretary of the Labour party, Mr. Henderson says: "It is neither dignified nor consistent with democratic ideals that Universities should wait, cap in hand, on the capricious generosity of private benefactors who may seek to impose their own views upon them." Such an utterance will do something to convince doubters that democracy is not indifferent to education, and should the near future find us with a Labour Government, as a section of the press insists it will, the Universities need not on that account fear any crippling of their financial resources. The Labour Party, says Mr. Henderson, stands "for a system of higher education which would free it from the financial barrier which at present excludes the vast majority of working-class children, however capable," and has insisted that "the only test of admission to a University should be intelligence and character, not class or income." The suitable test for admission to any school or college assisted by the State, it will be agreed, is one of ability to profit duly by the advantages it offers, and this test should be applied impartially.

THE Public Schools Boxing Championships, formerly in the hands of the Aldershot Authorities, have now been placed under the control of the Amateur Boxing Association. Some misunderstanding has occurred. It was thought that the Head Masters' Conference was opposed to the change, which was suggested by the Army Authorities, but the statement recently made by Dr. David, of Rugby, last year's Chairman of the Conference, has removed misapprehension. He says:—"The Head Masters' Conference has accepted the situation—namely, that the Aldershot Authorities have handed over the boxing competition to the A.B.A. I have had no protest, still less any suggestion, that the schools should not support the A.B.A. . . . I feel sure that the A.B.A. may count

on our support." This is as it should be. The public schools believe in the art of boxing as a valuable training in some of the most necessary qualities of mind and body, and there is little doubt that the boxing championships tend to raise the standard of boxing in the schools. The art is one which has always appealed strongly to the public-school boy, in common with nearly all healthy Englishmen. Pollux and the heavy-fisted veteran Entellus find warm admirers and followers in the schools. Witness the Eton Oppidan fights in "good calx" in the days of Keate, and the fame, in recent days, of the redoubtable Hopley of Harrow, who invariably knocked out his opponent in the championships in the first round. It would be no bad thing if the championships were extended to include all secondary schools. The meeting of the best boxers from all the secondary schools of the country upon a common platform of skill, endurance, and self-control would form a link between classes most valuable in these days.

THAT the Board of Education realize the difficulties which Local Education Authorities will experience when it becomes necessary to find teachers for the new continuation schools to be established under last year's Act is shown by the recent Circular 1102 to Local Education Authorities for Higher Education. A

Staffing of Continuation Schools.

complete system of continuation schools, if it were brought into existence at the present time, would, it is said, require the services of 32,000 teachers at the end of three years. Where are they to be found? The Circular admits there is no surplus of teachers available from amongst the personnel of schools of other types. Not only is this true, but it is impossible adequately to staff existing schools, and, in elementary schools throughout the country, teachers are expected to grapple with classes of as many as sixty or seventy children. Nor are there recruits enough presenting themselves for training to meet normal wastage. The outlook is far from encouraging, and, so long as teachers are driven to strike in order to secure a living wage, there is little likelihood of any improvement. The teaching profession must be made more attractive if we mean seriously to secure an efficient national system of education. "The Board do not doubt," the Circular states, "that it is the intention of Local Education Authorities, as it is their own intention, that the salaries shall be adequate." We hope the Board are not too optimistic, and that they will refrain from crying "Peace, peace, when there is no peace."

CIRCULAR 1102 has also much that is helpful to say about the broad objective of continuation schools and the subjects which may appropriately find places in their curricula. The schools, we are told, "must aim at the cultivation of physical soundness and vigour; they must train character, and exercise and develop the intellectual powers; they must make for efficiency in all activities of employment and citizenship; they must open the doors of imagination to the inheritance of the past and the potentialities of the future; in a word, they must give such a measure of liberal education as may be found practicable within the limits of time and opportunity." An excellent ideal, surely, and to reach it in the available eight hours a

Public Schools Boxing and the Amateur Boxing Association.

Aims of Continuation Schools.

week will tax to the uttermost the powers of the best teachers. Almost all educational questions, in fact, eventually come back to the need of efficient teachers. The continuation school teacher will have a difficult problem to solve. Young men and maidens may be compelled to attend schools for a certain number of hours a week, but they cannot be made to desire learning. The teachers will have nice questions of discipline to meet which will demand tact, humour, and charity, as well as an appreciation of the fact that young workers are being dealt with. Formal school lessons will be at a discount, and unless the teacher can arouse interest his labours will be in vain. The circular suggests that the services of educated social workers who have given their spare time to teaching, scout leaders, demobilized service men and industrial workers may be drawn upon, though even when this has been done to the fullest possible extent, there will still be many more teachers required, and for these we must look to the Universities to supply graduates who intend to make teaching their serious life's work. It must be a long time before efficient continuation schools can be established in all parts of the country.

THE SUPERANNUATION ACT.

THE Board of Education have issued to Local Authorities and governing bodies for distribution to the teachers, copies of forms that should be filled in and returned to the Board as soon as convenient. Form 10 Pen. particularizes the full-time teaching or other service claimed as recognized or qualifying service, and includes war service and sick leave. For teachers now in recognized service this form must be returned before October 1. Form 5 Pen. is the declaration as to health required, for the purpose of the death gratuity, from all present teachers under the age of sixty. Teachers between fifty-five and sixty (on April 1, 1919) have, in addition, to submit a certificate (Form 6 Pen.) furnished by a medical officer nominated by the Board. The names of such medical officers are given on List 11. The fee has to be met by the teacher concerned. The declaration and certificate must be signed after March 31, and before October 1. Teachers entering recognized service after April 1 will have to satisfy the Board as to physical capacity before they are entitled to any benefits under the Act. All the above forms and lists are now in the hands of the Authorities and governing bodies, and teachers who have not yet received them should ask for them at once.

Nominally the Act does not include service before eighteen or beyond sixty-five, but it is stated that the Board may consider special cases. If there is any case of special hardship arising out of the age limit, the teacher concerned should press his Authority or governing body to make special application on his behalf at the earliest moment. It should be noted that teachers coming under the Pensions Scheme are thereby withdrawn from the National Insurance Act.

At the time of writing, no fresh regulations have been made regarding the winding-up of old schemes, and some uncertainty exists as to the procedure with existing endowment policies. Forms have been issued to the Authorities and governing bodies, who are invited to state their proposals for sanction by the Treasury. In the majority of cases the school authorities favour the handing over of the policy to the teacher without any reservations. On the other hand, there is a belief that, before the Treasury consents, it may require the return of the Governors' contributions, where such have been paid out of public money—a course which will be fraught with grave injustice and hardship. In many cases, the surrender value will be so small that there will be nothing left

to represent the teacher's contribution. Secondly, since the Governors' contribution may fairly be regarded as deferred salary, the argument as to misuse of public funds is scarcely admissible. Teachers should urge the Authorities to combine in pressing strongly for the unrestricted handing over of policies.

An important addition has been made to the Statutory Rules and Orders. Paragraph VIII of Section 18 of the Act recognizes as pensionable, back service (up to ten years) in any non-profit, non-State school under certain restrictions which were given in Section 23 of the Rules. They stipulated service in England and Wales, a total pensionable service of not more than thirty years, at least ten years of some other form of recognized service, and, finally, that during the years allowed the teachers should not have been *under a pension scheme*. This last condition was bewilderingly drastic and would certainly have cut out 95 per cent. of those who came unscathed through the others. The new edition of the Rules alters the application of this condition by the addition of the words:—"Unless the Board are satisfied that the teacher has derived and will derive no benefit from the Pensions Scheme except in respect of his own contribution." Through some oversight this clause was omitted in the first edition.

PERSONAL PARAGRAPHS.

THE death of Dr. Percival, late Bishop of Hereford and formerly Head Master of Clifton College, was reported to the governing body of the College at its recent annual meeting. The Governors expressed their desire to record their deep sense of the rare fortune which gave Dr. Percival to the College as its first Head Master, and later enabled them to enjoy his services for nearly forty years as a member and as chairman of their body. They felt that the School, which had been created, established, and maintained in large measure by his force, his guidance, and his generosity, owed him a unique debt. It was also reported that Dr. Percival had left a reversionary legacy of £2,000 to the College. At the same meeting Sir Henry Newbolt, D.Lit., one of the best known of Old Cliftonians, was elected as a member of the Council, in succession to Dr. Percival.

* * *

A PORTRAIT medallion of Rupert Brooke, the Old Rugbeian who, while serving in the Royal Naval Division, died at the Isle of Lemnos, in the Aegean Sea, in April, 1915, has been unveiled by General Sir Ian Hamilton in Rugby School Chapel. The memorial is a profile portrait by Mr Thomas Harvard, and beneath appear a few lines from perhaps the most famous of Rupert Brooke's sonnets, "The Soldier," beginning with:—

If I should die, think only this of me.

The ceremony was attended by many admirers of Rupert Brooke, and Sir Ian Hamilton paid touching tribute to the youth, charm, beauty, and genius of the famous poet, and referred feelingly to the great tragedy of his death.

* * *

SIR ERNEST RUTHERFORD, F.R.S., Professor of Physics at Manchester University, has been elected Cavendish Professor of Experimental Physics at Cambridge, in succession to Sir J. J. Thomson, O.M., Master of Trinity, who has occupied the Chair since 1884. The distinguished line of occupants of the Chair began in 1871 with James Clerk Maxwell, who was followed by Lord Rayleigh, now Chancellor. Sir Ernest Rutherford was born at Nelson, New Zealand. From New Zealand he proceeded to Cambridge in 1893, where he took his degree as a research student, and was awarded the Coutts Trotter Studentship in Natural Science. In 1898 he was appointed Macdonald Professor of Physics in McGill University, and nine years later he became Langworthy Professor of Physics at Manchester. Several Universities have conferred doctors' degrees upon him, and he has been Bakerian

Lecturer at the Royal Society, Rumford Medallist, Bernard Medallist, Bressa Prizeman and Nobel Prizeman for Chemistry. His main research of late years has been in connexion with radioactive substances and their radiations.

* * *

THE REV. DR. W. T. A. BARBER, who has been Head Master of the Leys School, Cambridge, since 1898, is resigning at the end of the summer term. An old pupil of Kingswood School, Bath, and a scholar of Caius College, Cambridge, Dr. Barber was Twenty-seventh Wrangler in the Mathematical Tripos, 1880, and graduated B.A. London in 1882. The governing body of the Leys School, in accepting his resignation, expressed their deep gratitude for his long and distinguished service, and particularly for the way in which he placed the interests of the School before his personal convenience by continuing in office during the War. They also rejoiced at the honour conferred upon him by the Wesleyan Conference in electing him President for 1919-20, and begged him to accept the title of Provost of the Leys School during his presidential year.

* * *

MR. C. E. INGLIS, Fellow of King's College and University Lecturer in Mechanical Engineering, has been elected to the Chair of Mechanism and Applied Mechanics at Cambridge, rendered vacant by the death of Prof. Hopkinson. Prof. Inglis was educated at Cheltenham, and bracketed 22nd Wrangler in 1897. The following year he was head of the first class of the Mechanical Sciences Tripos, Part I. During the War Prof. Inglis invented and constructed a type of bridge extensively used by the British and American armies. He has also done considerable work in the invention of tubular observation towers and combined tubular and pontoon bridges. He was twice mentioned in dispatches and attained the rank of Major.

* * *

MR. J. R. ECCLES has been appointed Head Master of Gresham's School, Holt, in succession to the late Mr. G. W. S. Howson. Mr. Eccles, who is an old Cliftonian and late exhibitioner of King's College, Cambridge, gained First Classes in Parts I and II of the Natural Sciences Tripos in 1897-8. He has been an assistant master at Gresham's School since 1900, and for many years has held the position of second master.

* * *

MR. ALEXANDER P. McMULLEN has been appointed Adviser on Education to the Admiralty. Mr. McMullen, who is an old Rugbeian and formerly a Scholar of Merton College, Oxford, obtained a first class in Natural Science in 1898. After several years' experience at Bradfield College, he went to the Royal Naval College, Osborne, in 1904. In the following year he transferred to the Royal Naval College, Dartmouth, where he became senior science master.

* * *

MR. CHARLES FRANCIS MOTT, Assistant Secretary and temporarily Acting Director for Higher Education to the Staffordshire Education Committee, has been chosen as the new Director of Education for Cheshire. Mr. Mott was educated at Reigate Grammar School; King's College, London; and Trinity College, Cambridge.

* * *

LORD HALDANE has accepted the invitation of the Governors of Birkbeck College, London, to become President of the College in succession to the late Lord Alverstone. It is interesting to note that the recent Royal Commission on University Education in London, over which Lord Haldane presided, recommended that Birkbeck College should be the Constituent College of London University for evening and other part-time students.

* * *

THE Governors of Kingswood School, Bath, have selected Mr. H. A. Wooton for the position of Head Master *vice* the late Mr. W. P. Workman. Mr. Wooton was educated at Nottingham High School, and went to Clare College, Cambridge, as Senior Science Scholar. He obtained a First Class

in the Natural Science Tripos, Part I, 1904, and Part II (Chem.), 1905. He acted as demonstrator at the University Laboratory, Cambridge, in 1905, and as assistant lecturer at Clare College, 1905-6. Since 1906 he has been science master at Westminster School. For many years he has taken an active interest in the Assistant Masters' Association, and he was the founder of the London Wesleyan Society.

* * *

MR. F. T. HOWARD, H.M. Divisional Inspector of Schools for the London area, has been appointed by the President of the Board of Education to be Staff Inspector for Elementary Schools. Mr. Howard was formerly on the staff of University College, Cardiff, and before coming to London as Divisional Inspector he was for some ten years H.M. Inspector for Cheshire.

* * *

DR. ALINGTON, the Head Master of Eton, pays a unique tribute in verse in the *Eton College Chronicle* to Mr. H. Broadbent, who is retiring after a long record as an assistant master. From the many delightful lines the following are extracted:—

Good-bye, Mr. Broadbent! to tell you my mind,
You will not leave a wiser or kinder behind;
In learning a Porson, in morals a Cato,
As expert in the *Times* as judicious on Plato;
There is nothing too weighty and nothing too small
To escape your attention: you follow them all.

No Eton performance is ever complete
If you're not to be found in a prominent seat:
The surgeon, the preacher, the scholar, the poet
Never make a mistake but they know that you know it:
No fives-player misses an obvious stroke,
No piquet-player ventures the mildest revoke,

But we feel that your eye will unfailingly mark us,
And we shrink from the lash of our own Aristarchus.
But while as a critic you're mending our ways
There is no one so ready with generous praise;
And, although you're a man to whom flattery's hateful,
You can hardly object to be told that we're grateful.

* * *

By the death of Captain F. C. Forth, Principal of the Municipal Technical Institute, Belfast, Technical Education in Ireland will sustain a profound loss. Captain Forth was the vice-chairman of the Standing Council of the Irish Technical Association, and has presided at four annual congresses. Formerly Vice-Principal of the Municipal School of Technology, Manchester, Mr. Forth was appointed Director of Technical Instruction in Belfast in 1901. He immediately set to work to organize the technical and commercial instruction of the city, and it is due to the success of his efforts that Belfast now possesses one of the finest and best equipped technical institutions in the United Kingdom, in which are enrolled about 7,000 individual students.

ONLOOKER.

THE *Anglo-French Review*, of which the first number appeared last month, has made an excellent start, which is not surprising with such very competent editors as M. Henry D. Davray and Mr. J. Lewis May. It seeks to cover a wide field, for it embraces within its purview politics, literature, the arts, science and economics. Among the contents of the first number we would single out Mr. Gosse's judicious and scholarly estimate of Leconte de Lisle and some pleasant notes by M. Davray on George Meredith, whose works he has translated. Interesting too, is M. Malo's article on "Les Stuarts et les Corsaires Français." Mr. Gerthwohl writes enthusiastically of Foch. The poetry included is of uneven quality; some of the English verse is second-rate, and the poem by Paul Fort will be discouragingly obscure to most readers. There are some good reviews of French and English books and a bibliography of recently published books in both languages is a valuable feature. The price of the *Review*, which appears monthly, is 2s. 6d.; and the publishers are Messrs. Dent.

FRANCIS STORR.

THE death of Francis Storr, which took place on April 7 in Staffordshire, marks the end of a long and fruitful life, devoted to educational activities of various kinds.

Born in 1839, Mr. Storr had already passed his eightieth birthday, which a slightly elder contemporary, Dr. Edwin Abbott (also a schoolmaster and Cambridge man) recently celebrated in his own case. Mr. Storr, after distinguishing himself at Cambridge, went to Marlborough College, where he held an assistant mastership for a time, and from thence passed to Merchant Taylors School in 1875, soon after the late Dr. Baker became Head Master. He joined the staff of the famous London School at a critical time in its history—when it had been moved from its old and somewhat restricted quarters in Suffolk Lane, and transferred to a new site in Charterhouse Square. Here, within reconstructed buildings, but upon a site full of associations with the old Charterhouse School, and standing in a fine open space within the heart of the City, the reorganized school underwent a great expansion, and prospered greatly. Both Dr. Baker and his brilliant assistant were young men at the time, and brought to their work unflagging energy and enthusiasm. Though by tradition a classical school of the old type, Merchant Taylors was, under the new régime, provided with a well equipped modern side, as well as a classical. It fell to Storr's lot to organize this new department as "Chief Master of Modern Subjects," and in this position he remained till Dr. Baker's resignation in 1900, shortly after which Storr retired.

As chief of the Modern Side he came into close contact not only with the members of his own form (the Head Form Modern), but also with the Classical Head Form, and his influence, especially with the abler boys, was extraordinarily stimulating. The most brilliant of his pupils—among whom may be mentioned the present Regius Professor of Greek at Oxford, Mr. F. S. Marvin, and the late Mr. Pogson Smith—have frequently testified in later years to their admiration of their old teacher and their abiding gratitude for what they owed to him. Mr. Storr was perhaps a little impatient of dullness, and was not prone to suffer fools gladly; but he was always quick to detect and encourage real ability.

As a member of the Common Room he occupied a place of his own. Witty (sometimes mordantly witty), quick at repartee, epigrammatic, his conversation was always pungent and stimulating. He was an excellent speaker and raconteur, and whatever he said or wrote was marked by real distinction. His culture was broad, combining a fine classical scholarship with a wide knowledge of modern literature, English, French, and German. Those who were privileged to be in his class when he expounded "In Memoriam" or Goethe's "Faust" can testify what this meant. His school commentaries on the "Aeneid" are among the best books of the kind we know.

As Editor of *The Journal of Education*, from the direction of which he retired last year, he exercised a wide influence in the educational world. He was a champion of broad ideals in education, and worked hard to promote a wider acceptance of modern subjects, and to increase the efficiency and improve the status of the teaching profession generally. Perhaps the best exposition of his educational ideals can be found in his "Life and Remains of R. H. Quick" (1898). He took an active share in London University work, and was a whole-hearted supporter of the new Universities generally. His election (under the rule which specially allows the extension of membership to distinguished men of letters) to the Athenæum was a well deserved recognition of literary distinction. He lived to see many of his ideals well on the way to being realized; and of him, in a very real sense, we may say truly, "felix opportunitate mortis."

G. H. B.

To most of our readers Storr was first and foremost the editor of this *Journal*. He was practically its founder, for he took it over in 1878 when it was a small and struggling

quarterly, turned it next year into a sixpenny monthly, and from that date till the spring of 1918 carried it on as sole editor. During this period of forty years the size of the annual volume increased from 248 pages to 864 (the number in 1914, the last normal year), and the size of the page was made larger. The list of contributors includes the names of the majority of contemporary thinkers and leaders in education. But by no means the least valuable amongst the contributions were the Editor's own; for many years he wrote most of the editorial matter, and his choice of language and happy peculiar lightness of touch commended him to a large circle of readers. He also founded the Prize Competitions, which have been one of the features of *The Journal* for more than a quarter of a century, and he acted as Prize Editor as long as his connexion with it lasted. It is not too much to say that Storr made *The Journal of Education* not only the leading periodical of its kind in England, but one of the most eminent in the world amongst those dealing with its subject. This record of work and achievement is the more remarkable because, for twenty-seven years out of the forty, Storr was Chief Master of Modern Subjects at Merchant Taylors School, engaged, week in week out, in the ordinary work of a schoolmaster.

But *The Journal* did not exhaust Storr's activity. He was a keen educational reformer, and he took a leading part in the work of several educational societies. He was for many years a member of the Council of the Teachers' Guild and of that of the Froebel Society. He was Chairman of the Modern Language Association for some ten years, and when he resigned he received the compliment of election to the Presidential Chair (1908). For many years no figure was better known at educational conferences. His greatest interests were perhaps training, the registration of teachers, and modern languages. He was a member of the first Registration Council, and of the second, and existing, body from 1912 to 1915. The first experiments in the training of secondary school teachers—the essays, namely, of the Finsbury Training College and that of the College of Preceptors—found in him a strong supporter. His ardour for modern languages and literatures was the more notable inasmuch as he was distinguished as a classic, being a scholar of Trinity, Bell University Scholar, and sixth in the Classical Tripos of 1861. He kept up his classics to the end, and a few years ago translated Sophocles for the "Loeb Classical Library." He produced English versions also of Heine's "Reisebilder" and Lermontov's "Demon"; for, in addition to a wide knowledge of French and German literature, he had considerable acquaintance with Italian and more than a pennyworth of Russian. To extensive reading he added a fine literary taste and a singularly retentive memory, and there can be few men living so well versed at once in ancient and in modern letters, while his bright and vivid personality gave life and reality to whatever he touched.

G. F. B.

One of the most distinguished of his former pupils writes:—"He had always that touch of something big and disinterested and vividly alive. One could not think of mean or worldly things in connexion with him—only of great literature and real thought and the sort of politics that mean thought and inspiration."

CERTIFICATES IN ITALIAN, RUSSIAN, AND SPANISH.—The University of London, which has for some years past held special examinations for certificates in French and in German, has now instituted similar certificates for three other languages—namely, Italian, Russian, and Spanish. The examinations are intended primarily for teachers who are not specialists in the language, but who require a certificate testifying to their practical working knowledge of the language. They are held annually, at the end of the summer term, and particulars can be obtained on application to the University Extension Registrar, at the University of London, South Kensington, S.W.7.

TOPICS AND EVENTS.

VACATION TERM FOR BIBLICAL STUDY.—The seventeenth Vacation Term for Biblical Study will be held this year at Cambridge from August 2 to 16. The inaugural address will be given by the Bishop of Ely on "The Kingdom of God," and the following among other courses of lectures have been promised:—First week: "The Psalms," by the Rev. Canon Kennett, Regius Professor of Hebrew, Cambridge; and "The Christian Foundations of Human Society," by the Rev. Dr. Bethune-Baker, Lady Margaret Professor of Divinity, Cambridge. Second week: "The Psalms" (continued), by the Rev. Canon Kennett; and "The Gospel according to St. Matthew," by the Rev. Canon A. Williams. Other lectures have also been promised. Hebrew and Greek Testament readings will be held throughout the term. Further particulars may be obtained from the secretary, Miss E. Lawder, 25 Halifax Road, Cambridge.

VACATION COURSE FOR TEACHERS AT BINGLEY TRAINING COLLEGE.—A Vacation Course will be held at the Training College, Bingley, from August 6 to August 22 inclusive. It will be open to all on payment of the fee. The aim of the Course is to stimulate teachers, and to give them opportunities of studying new methods of teaching the various subjects rather than to give specific instruction in the subjects themselves. There will be no examination at the end of the course, but importance will be attached to serious work and regular attendance. The following courses will be included among those offered:—*General Course*—A Course on Education, Prof. John Adams; the Teaching of English Literature, Mr. Arthur Burrell; the Teaching of Music in Schools; Dr. J. E. Borland; the Teaching of Arithmetic, Miss M. Punnett; the Teaching of Organized Games, Miss E. R. Clarke; the Teaching of Religious Subjects, Miss H. M. Wodehouse; the Teaching of English Phonetics and Reading, Miss M. M. Wilson; Informal Domestic Teaching in Schools, Miss G. E. Irons; the Teaching of History (with special reference to Social History), Miss A. F. Dodd. *Special Courses*—The Teaching of Handwork, Miss J. P. Slight; the Teaching of Needlecraft, Miss M. Swanson; Special Course for Teachers in Rural Schools, Dr. O. V. Darbishire and Mr. C. W. H. Greaves. The fee charged for the course, including tuition, board and residence in the College, will be £5 10s. The syllabus, containing time tables and full particulars of the course, will be issued shortly, and can be obtained upon application to the Education Department (Secondary Branch), County Hall, Wakefield.

A HOLIDAY course in Physical Education (Ling's Swedish System) for men and women has been arranged by Mr. H. G. Junker at Silkeborg, Denmark. The course will begin on July 31 and last until September 5. The instruction will be given in English. Applications should be sent as soon as possible, to prevent disappointment, to Mr. Junker as above.

ROYAL COLONIAL INSTITUTE.—In view of the uncertainty of the overseas mails, and because of representations received from Australia that the time allowed to competitors is not sufficient, it has been decided to extend the time for sending in the essays for the Royal Colonial Institute's Competition for the current year from May 31 to July 31 from all competitors.

WALKER TRUST ESSAYS.—The Trustees of the Walker Trust (associated with the University of St. Andrews) are issuing an announcement of a group of Prizes offered for Essays on "Spiritual Regeneration as the Basis of World Reconstruction." The prizes offered include four Students' Prizes of £25 each, four Workers' Prizes of £25 each, and an Open Prize of £200. In the case of students and workers the prizes offered are allocated to four divisions—one to Great Britain and Ireland, one to other parts of the British Empire, one to the United States of America, and the fourth to other countries. Those who wish to obtain copies of the announcement of the conditions and the prizes offered should apply to the Secretary of the Walker Trust, Rothies, Markinch, Fife, Scotland. A representative selection of the essays on "Prayer," the subject of last year's essays, will be published in the autumn by Messrs. Macmillan & Co., Ltd., under the title "The Power of Prayer."

CIVICS AND EUGENICS IN RECONSTRUCTION.—The Committee of the Summer School of Civics and Eugenics have arranged to hold their second school in August. The centre selected for the meeting this year is Cambridge. The Vice-Chancellor has kindly

placed the University Arts School at the disposal of the Committee, and all lectures, seminars, the exhibition of books and surveys, the students' library, common room, &c., will be under the same roof. In addition, the lecture theatre of the Botanical School will be available. The programme will fall into two portions, the first week being devoted to a preparatory course dealing with the scientific bases of educational and social work, and the lectures of the second week dealing with special applications of civics and eugenics to the work of the teacher and social worker respectively. Advanced courses for selected students will be organized in biology, philosophy, and theory of citizenship, and practical psychology. A course in Citizenship will also be included this year. The Regional Association will organize a Survey of Cambridge during the fortnight, and a Eugenic and Civic Exhibition will be under the direction of Mr. Harold Peake. A Publishers' Exhibition and a Lending Library for students will be arranged. Hostel accommodation will be under the personal supervision of Miss Elizabeth Clark. All communications should be addressed to the Secretary, Summer School of Civics and Eugenics, 11 Lincoln's Inn Fields, London, W.C.2.

THE ASSOCIATION OF TEACHERS OF DOMESTIC SUBJECTS.—The recently published Yearbook of the Association, dealing with the work of 1918, shows that its membership has now reached 1,756, to which must be added 127 student members. The general report records an increase in membership for the year, and a development in the number of local associations. The grants to training schools of domestic subjects have, the report records, been brought up to the level of other training colleges to the extent of grants-in-aid for two years, and personal grants have been made to students of domestic subjects, so that the cost of training will be less than in the past. Domestic subjects teachers are included, too, in the benefits under the Superannuation Act. The report speaks hopefully of the future. It is proposed to raise the annual subscription, and to appoint a paid organizing secretary. Full particulars as to membership may be obtained from the Hon. Secretary, Miss K. Mildred Buck, 70 Hastings House, 10 Norfolk Street, Strand, London, W.C.2.

EDUCATION IN LONDON.—In the seventh edition of "The Organization of Education in London," recently published by Messrs. P. S. King & Son, Ltd., price 6d., Sir Robert Blair outlines simply and briefly the work which is being done by the London County Council to educate Londoners. He reminds the reader that in 1833 Parliament voted £20,000 for public education, and in the absence of an Education Department the grant was administered by the Treasury. To-day the educational budget of the London County Council alone amounts to some eight and a-half millions. The administrative staff in the Council's education service consists of about 1,150 officers, including 77 inspectors and organizers. Sir Robert Blair details the numerous departments of the Council's educational work, and it is to be hoped his description will be widely read. Writing on secondary education, he points out that since 1904 23 secondary schools have been provided by the Council, and give accommodation for 8,500 pupils. The total public secondary-school accommodation in London now is approximately 16,000 places for boys and 19,000 places for girls, or about 7.8 per 1,000 of the population.

THE ROYAL DRAWING SOCIETY.—At the Guildhall Art Gallery the Annual Exhibition of the Royal Drawing Society was held from April 5 to 24. The exhibits were gathered from all parts of the country, and there was also a collection from overseas. Boy Scouts and Girl Scouts contributed, and there were drawings done at the Front by Old Boys. There seemed to be a great deal of the more advanced work that comes from institutions where drawing is made much of. In this case there was no need to be surprised at the high standard of excellence reached. As was naturally to be expected, juveniles were to the fore, for it has always been the mission of this Society to encourage the children as much as the teachers by means of exhibitions and distinctions. Some imagination was necessary to understand the infants' work. A bent line at an angle of 45 degs. and a few scrawls, giving some idea of the tail of a cat, may be the work of a child not yet two years of age, but we confess it was necessary to have the thing explained to us. And it is rather early in life for an artist to wake up famous. The greater part of the school-children's work exhibited was by those of ability rather above the average. Some of the pictures of Armistice Day which were shown are very well drawn and quite humorous. There were one or two drawings from schools where machine-drawing is made an important subject. There were a raised contour map in wax and one in cardboard, specimens on which much time and care had been spent.

An Invaluable Spring Book.

NAME THIS FLOWER.

How to tell the Names of Wild Flowers by the SIMPLE WAY, without a knowledge of Botany.

From the French of GASTON BONNIER,
Professor at the Sorbonne,

Translated and Edited by

Prof. G. S. BOULGER.

With 312 COLOURED PLATES and 2,715 Black and White Illustrations.

Containing also a chapter on the Gathering, Preservation, and Uses of Plants.

Cloth 7s. 6d. net. Pocket size.

Spectator.—"Precisely what many people, who love flowers, but have not studied botany, have long wanted."

Outlook.—"We heartily commend this book to our readers."

Cambridge Magazine.—"This most useful and entertaining work."

Lady.—"Of quite exceptional interest and practical value."

PROSPECTUS will be sent on application to

J. M. DENT & SONS,

10-13 Bedford Street, W.C. 2.

A MESSAGE TO
VIOLIN LOVERS.

We have the finest stock of **New Violins** and many **Old Violins**, and sell them at their actual tone value, regardless of maker, history, and label.

Amateurs and professionals looking for a good-toned, well-made violin, should keep in touch with us until suited. Fine reproductions of famous makers—Stradivarius, Guarnerius, Maggini, Vuillaume, are continually provided by us.

We would welcome your enquiries, and request that our ever-changing lists of **Old Violins** and **Violin Music** may be sent to you periodically.

Name

Address

Please say if interested in a new or old instrument.

New Violin..... Old Violin.....

Approval period arranged with responsible parties.

Old violins bought or taken in exchange.

NOTICE.

Increase in price of back numbers of
"The Journal of Education."

Copies of *The Journal of Education* over twelve months old are now charged **double price**, and those more than three years old, **treble price**.

For a list of Numbers, Volumes, and Binding Cases, still in print, apply to the Publisher:

Mr. WILLIAM RICE, 3 Ludgate Broadway, E.C. 4.

There was a wide range of subjects, and the Royal Drawing Society clearly had many hundreds of drawings to examine.

SHAKESPEARE DAY.—The Hon. J. W. Davis, the American Ambassador, has consented to become president of the Shakespeare Association and Shakespeare Day Committee, in succession to the late Dr. W. H. Page. Dr. Page had taken a leading and active part in promoting the aims of the Shakespeare Day movement, especially in linking the schools of the United States with British Schools in a joint observance of the day. Last year the American Commissioner of Education had requested every school throughout the States to commemorate April 23 as Shakespeare Day, and in the State of New York alone some ten thousand schools responded. With the generous help of Sir Charles Wakefield, Hon. Treasurer of the Shakespeare Day Committee, it has been decided to present as a tribute to the memory of Dr. Page gifts of books of Shakespearean interest to about one thousand teachers responsible for last year's observance in British schools. These will be chosen by Prof. I. Gollancz, Chairman and founder of the movement, from the classified report prepared for Dr. Page. In view of the fact that April 23 fell this year during the school vacation, the Committee suggest that May 6 should be generally kept as Shakespeare Day in the schools. Arrangements are being made to bring the movement to the notice of American and Colonial soldiers, sailors, and others who happen to be in England, and to associate them with Shakespeare Day functions.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

Some weaknesses in Section 10 (read with Sections 3 and 52) of the English Education Act we have already indicated; this month we deal with others. Its provisions remind us of those old-time theologians who first proclaimed the doctrine of universal salvation and then proceeded to ex-

Continuation—
in England
and in the
United States.

clude from its benefits all mankind except themselves and a few personal friends. There has been rare forethought to keep as many as possible out of the continuation school; only the conscientious objector is forgotten. Exempt from the obligation to attend it is the young person who is above fourteen years of age on the appointed day, which may be delayed indefinitely. Every week hundreds of those who were to be benefited are attaining the exempting age. Again, it is notorious that far too large a number of our children are in secondary schools of a low grade—schools in no way comparable with the great secondary schools of Germany, Austria, or France. It was the solemn duty of Section 10 to exempt only those in good schools; for obligatory continuation was needed not only to provide a sanction for efficient secondary schools, but also to exterminate the inefficient. Now, how does the Section treat the "young person" taught in a school whose instruction the Local Education Authority, consisting of no harsh judges, has refused to accept as satisfactory? You might expect that it would tell him he must go to a proper secondary school, or fall under the obligation to attend a continuation school. If it did, the Local Authorities would be enabled to cleanse their own areas of inefficient schools. But no! Section 10 allows the young person or his parent to appeal from the Local Authority to the Board of Education, which from London may declare good what Yorkshire has found bad. And it is empowered to overrule the Local Authority without inspecting the questionable school; it may refuse to consider the appeal unless the school submits to inspection, but it is not bidden—as it should be sternly bidden—to do so. Pray observe that, although the Local Authority may not damn unchecked its own bad secondary schools, it is deemed competent (10, 3, ii) to judge the sufficiency of part-time instruction to be accepted as an equivalent for the attendance of a continuation school. Whilst that "part-time instruction," all undefined, is a source of anxiety to the far-sighted, Section 10 is content to have found in it another ground of exemption. For indeed, the truth is, Section 10 has not understood that continuation means a great educational and social reform—a reform demanded for and by the working classes alike in England and in the United States. The President of the (highly democratic) American Federation of Teachers lately specified among the "planks repeatedly adopted by Labour both in State and National Conventions" the universal

establishment of a minimum school-leaving age of sixteen years and the provision of compulsory continuation schools for pupils up to eighteen (*American Teacher*, VIII, 2). And a well known American schoolman, blessing a certain new Bill in the name of the National Education Association, desiderated for America a measure like Mr. Fisher's Act (*American Teacher*, I.c.). For they suppose in the United States that Mr. Fisher has given us obligatory continuation. What he has done with respect to continuation is to obtain for the Board of Education statutory powers to appoint, in "any area or part of an area," a day for the enforcement of a Section imperfect and inadequate at its inception, and grievously mangled before it grew to be law. That is how we stand at present—after twenty years of struggle.

The new Bill referred to in the preceding paragraph is a revision of the Bill introduced in the Senate last autumn by Senator Hoke Smith to create a Federal Department of Education. We published a summary of the old Bill in this column; the new Bill, fathered by Judge Towner of Iowa, differs from the Smith Bill in providing further means to safeguard local control in education, and to ensure that the Federal appropriation shall be used in part for the payment of teachers' salaries. It has the support of all the chief educational groups.

Since its foundation in 1902 the General Education Board—we have received the Report for 1917-18—has appropriated some 14,000,000 dollars towards the endowment of colleges and universities, and it has actually paid over more than 10,000,000 dollars of that sum. Schoolhouse planning and construction is a field of which it promotes the survey; and, when a Committee of the National Education Association began to study buildings, the Board opened its helpful purse. The Committee found that the cost of construction varied much even in conterminous States, and, again, that, whilst some buildings devoted 63 per cent. of their space units to the purposes of instruction, others gave only 38. In the United States schoolhouses are in process of construction everywhere, under special architects, and some degree of standardization is deemed feasible. The little red schoolhouse on a stony plot has developed, in the large towns, into a superb and impressive edifice. It was fortunate for America that such competent men as Richardson in Massachusetts and Snyder in New York applied themselves to school architecture, seeking to combine economy with convenience and to show the demands of education as not inconsistent with the demands of art. For external beauty, no less than internal fitness, should be required of the school. There is a style of ecclesiastical architecture known as "Pure Churchwarden"; we deprecate a style of school architecture that posterity might designate as "Pure County Council."

We would fain promote in England a zeal for education to citizenship, adducing as a stimulus the example of America. Look, for instance, at Massachusetts. The School Committee of the city of Lawrence has set apart the Oliver School, which has fourteen hundred pupils and forty teachers, to test what can be done in cultivating group-consciousness, a sense of civic duty, and patriotism in the minds of the young. Two expert teachers from the State Normal School at Lowell will give instruction in it, and a series of leaflets relating to principles and material is being issued. The National Security League, continuing still the good work that it has done during the War, provides the funds to defray the expense incurred by the school. Such experiments, such endeavours are needed in England. A New Age cannot be built on envy, bickerings, and the hostility of class to class. The school must teach the interdependence of men and make social unity no less an aim than sound learning and good living. Current events should show it the urgency of this duty.

FRANCE.

The War has hatched a mighty brood of books in France; we signalize as timely M. Frédéric Eccard's *In Alsace-Lorraine*. "L'Alsace sous la domination allemande" (Librairie Armand Colin; 4 fr.). In the territory now to be restored to France there are some difficult educational problems to be solved; for it contains 37 secondary schools, with 691 teachers, giving instruction to more than twelve thousand pupils. Many French teachers from Alsace-Lorraine will be glad to return to the land of their fathers; but by doing so they will leave gaps in the lines, already thinned, of the teachers of France. And salaries have been higher under German rule than the French are accustomed to pay. It is for France to surmount these difficulties. We rely on our allies to effect the change

of administration as tenderly as possible. It is no gain for humanity if bitterness is transferred from one set of hearts to another, and France stands for humanity.

INDIA.

The Report on Public Instruction in Bombay, 1917-18, exhibits the special weakness of education in India: the girls are not drawn into the schools. Against 632,987 boys under instruction there were only 148,687 girls, the boys under instruction being 6.2 per cent. of the total population of the Presidency, the girls 1.6 per cent. We give some other details from the Report. The expenditure for education was augmented. Recommendations were made for filling six permanent vacancies in the Indian Educational Service by Indians deemed fit to fill them. A new scheme of equivalence between the examinations of Bombay and other Universities was sanctioned. The number of pupils (65,000) in the (420) high schools rose by 5 per cent., an increase to which all communities except the Parsis contributed. One-fourth of the teachers in these schools were trained; a few more than a fourth possessed a University degree. A decrease (to 565,737) of 1 per cent. in the enrolment at primary schools was due to plague. Only 38.7 per cent. of the primary teachers were trained. The demand for improved salaries was emphasized by a three months' strike of 431 untrained teachers in the Surat district. The Act permitting Municipalities under certain conditions to make education free and compulsory came into force just after the year under review closed. Curious to relate, an experiment in part-time education for the children of agriculturists had to be abandoned on account of its unpopularity.

There are those to whom examinations are odious; the new Spiritualists may make them impossible, since foreknowledge of the questions to be set can, it is alleged, be got through mediums. The Indian student, eager to be examined, is naturally eager also to know what tests of attainment will be applied. At Calcutta University the questions for the Matriculation, for the B.A., and the B.Sc. Examinations leaked out—were discussed, it is said, in the bazaars and streets. It was two years ago. A Committee of the University, after a lingering investigation, has reported

The Bombay Report.

that "the leakage was brought about not by examinees, but by some organized body of persons anxious to bring discredit on the University." We rejoice that the students did not this time originate the fraud. For the rest, a University that cannot protect itself against such malfeasance deserves to be discredited.

CANADA.

In Sir Wilfrid Laurier Canada lost a great statesman and an eminent publicist. The *Revue Canadienne* (XXIII, 3) supplies some particulars of his early life which have not, as we think, been published in England. He was born on November 20, 1841, at Saint-Lin, by the foot of the Laurentides, and sprang from a family which was originally seated in Anjou, but migrated to Canada in 1660, and established itself first in the Ile Jésus, then at Lachenaie, and lastly at Saint-Lin. His father, Carolus Laurier, was a land-surveyor. His mother dying young, it was a stepmother that imparted to him the first rudiments of knowledge. Then he studied classics at the Catholic Collège de l'Assomption, of which he kept always pleasant memories. In defiance of its rules, he would often slip away to hear some political speaker, himself the orator of the school. Thence he passed to McGill University, where he studied law. Physically and intellectually well endowed, he pursued his course successfully until he was called to the Bar in 1864. His public life began in 1871, when Arthabaska sent him to the Chamber of Quebec. In *Les Langues Modernes* (XVII, i) a Frenchman, late a prisoner of war in Germany, relates, among the insults put on him, that a German chaplain, von Spee, cousin of the Admiral, offered him a German copy of the New Testament. Sir Wilfrid Laurier died a trustful Catholic; and, indeed, most of the French in Canada still cherish the faith from which so many of the French in France have turned.

QUEENSLAND.

The Education Report for 1917 shows that in the year there was an increase of 3,291 in the average daily attendance. A larger number of itinerant teachers visited the sparsely settled districts to instruct

Baby Shows and Day Nurseries.

The organizers of the Day Nurseries will profit greatly by the practical experience of the Baby Shows and Infant Welfare Centres. Methods which have been successful and foods which have proved their worth there, will be adopted by the new Nurseries.

At the most carefully judged Baby Shows and the most carefully supervised Centres for Infant Welfare,

ROBINSON'S "Patent" BARLEY

has been tested and has stood the test. Again and again has the First Prize Baby at the Baby Shows proved to have been fed on Robinson's "Patent" Barley.

Many a baby never has a fair start in life—born sickly, ailing and unable to be fed by Nature's method. Yet from these frail, suffering little bundles of mortality Robinson's "Patent" Barley has produced fine sturdy children. That is why in the Day Nurseries this famous food will be adopted and will have yet other opportunities of bringing health and happiness to our little growing citizens.

EDUCATIONAL GARDENING.

BY

ROBERT HOGG, F.R.H.S.

Instructor of Gardening to the Derbyshire Education Committee.

Extract from Introduction by Mr. ARTHUR HOUGH.

This book will prove a reliable guide to teachers, scholars, and others interested in Horticulture who wish to possess a good knowledge of facts and principles necessary for successful practical work, whether connected with school and cottage gardens or allotments. The writer, whose practical experience extends over many years, deals with sound methods of cultivation in a concise and clear manner. The pursuit of Horticulture acts beneficially on body and mind, it readily lends itself to experiment, sharpens the power of observation, anticipates results, and is a wholesome and profitable recreation.

the children of stockmen, boundary riders, timber-getters, and fossickers. The teachers in general (70 more than in 1916) were paid under a new scheme for the improvement of salaries. School gardening thrived; an Inspector relates that an experimental plot at Yandina, in the Brisbane-Gympie district, contained nine varieties of citrus fruit, potatoes, strawberries, pineapples, grapes, mandiocca, and vegetables. The ten grammar schools received State aid, and had many scholarships, awarded on an examination qualifying, not competitive; moreover, there were seven State high schools giving free secondary education. Nearly ten thousand students were trained in the fifteen technical colleges. The young University of Queensland provided instruction for 227 men and women. Queensland has been offering its share of sacrifice for the Empire: from the beginning of the War to the end of 1917, of 396 officials and teachers connected with the Education Department who had enlisted, 104 were reported as killed, wounded, or missing, and 28 names were inscribed on the University's roll of honour.

Vocationalism in the Dominions is a subject of great imperial interest. If the new tendency is followed, they will make a diminishing demand on Great Britain both for skilled labour and for manufactured goods. At the Cape of Good Hope the Superintendent-General has outlined a proposal for introducing into secondary schools courses suitable for those who intend to adopt commercial, technical, or agricultural pursuits. Canada seems to be moving in the same direction. The Queensland Report (pages 18 ff.) grips closely vocational education and the possibilities of developing it. Since 1908 the State has recognized vocational training as an essential element of national education, and done much to promote it, with good reason. Already in 1916 its manufactures were valued at £25,500,000, whilst it employed 7,526 persons in the making of clothing and textile goods, and 6,482 in the manufacture of metals and machinery. New markets and improved means of transit will give impetus to its industries, and it seeks to provide its own skilled labourers for them. A Departmental Committee has decided that an extension of facilities for vocational training and higher technical education is necessary, and a scheme, involving probably the lengthening of school-life through the attendance at continuation classes, is projected to extend them. Interest in work, a desire for increased knowledge, the pleasant and useful occupation of leisure, preparation for citizenship—these are among the objects at which the scheme aims, no less than at the imparting of general dexterity and special skill. We commend the Queensland Education Report to the attention of certain English obstructives.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

THE Teachers' Guild is arranging courses in French and Spanish at Oxford from August 13 to August 30. The Literature Section of the French Course will be arranged by Prof. Rudler, University of London, who, besides giving *lectures explicatives*, will lecture on Michelet. Prof. Fleure, of Aberystwyth, will lecture on some of the less known places in France, illustrated by lantern views. Miss Allison will be in charge of the practical classes, which will include "conversation and reading of phonetic texts." Señor Barragán will be in charge of the Spanish Course. Further particulars will be available shortly, and can be obtained from the General Secretary, 9 Brunswick Square, W.C.1.

The Teachers' Guild has acquired the lease of 7 Brunswick Square for an extension of club accommodation. Bedrooms are in great demand. The provision of this additional accommodation will make it possible to keep some of the rooms available for members of the Club passing through London or needing accommodation for a few nights at a time.

Resolutions have been adopted by the Council (a) urging the Government to carry out without delay the recommendations contained in the Report of their Committee on Modern Language Teaching in the sections numbered 46, 47, 48, 49, and 50; (b) in view of the high degree of skill required by examiners, as insisted on in Section 213 of the Report of the Government Committee on Modern Language Teaching, urging the School Examination Council to make provision for research in the scientific principles of examining and suggesting that valuable hints might be obtained by consulting the methods employed by the Civil Service Commission; and (c) urging that, as a rule, far larger use should be made in this connexion of the teaching profession by the employment of teachers as examiners, and by taking into greater account the school record.

A. & C. BLACK'S HISTORIES.

By M. W. KEATINGE, M.A. D.Sc.,

Reader in Education in the University of Oxford.

A FIRST HISTORY OF ENGLAND.

Demy 8vo. cloth, with many illustrations. Price 3s. 6d.
Or in two half volumes, cloth. Price 2s. each.

This history is suited for boys and girls from 9 to 12. Its main features are the large number of pictures, upon which to a great extent the narrative is based, the attention paid to social and industrial history, exercises on the pictures, and references for the teacher or the pupil to illustrative material for each episode. Summaries are included.

By M. W. KEATINGE, M.A., D.Sc.,

Reader in Education in the University of Oxford; and

N. L. FRAZER, M.A.,

Head Master of Ilkley Grammar School.

A HISTORY OF ENGLAND FOR SCHOOLS.

With Documents, Problems, and Exercises. Price 7s. 6d.; or in Two Parts, 4s. each.

Part I.—55 B.C. to A.D. to 1603. Part II.—A.D. 1603 to Present Day.

The "Documents, with Problems, and Exercises" are also published separately under the title of

DOCUMENTS OF BRITISH HISTORY.

Price 2s. 6d. each.

The plan of this series is so laid that *interest in the textbook or in the teacher's words is stimulated by supplementary reading*, and sufficient premises are given to allow of a reasonable and reasoning deduction. *The extracts are taken from contemporary authors, or are themselves contemporary documents.*

By H. L. BURROWS, M.A.

THE STORY OF ENGLISH INDUSTRY AND TRADE.

Containing 36 Illustrations. Price 2s. 6d.

This book is intended for use as a reader and textbook for the upper classes of primary schools and the lower and middle forms of secondary schools.

By EUGENE L. HASLUCK, B.A., F.R.Hist.S.

AN INTRODUCTION TO THE HISTORY OF ENGLAND.

With 15 Sketch Maps. Price 3s. 6d.

This volume aims at delineating in clear outlines the main threads of our History, and at enabling the student to grasp the essential lines on which England has developed as a State. It is intended as a book for use in the upper forms of schools, and a good knowledge of the contents of this volume should be sufficient for the purpose of the London Matriculation Examination.

A. & C. BLACK, Ltd.,

4, 5, & 6 Soho Square, London, W. 1.

G. BELL & SONS, Ltd.

BELL'S MATHEMATICAL SERIES FOR SCHOOLS AND COLLEGES.

GENERAL EDITOR: W. P. MILNE, M.A., D.Sc.

READY IMMEDIATELY.

Arithmetic for Preparatory Schools.

By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell; late Mathematical Master at Sherborne School; and Senior Mathematical Master at Sherborne Preparatory School. Crown 8vo, 4s. net; or with Answers, 4s. 6d. net.

This textbook follows the lines of the syllabus issued by the Curriculum Committee of the Head Masters' Conference. Chapters are included on Graphs, Logarithms, and Household Accounts. Decimal notation is introduced, and illustrated by practical work. The examples cover a wide range, and revision papers are included after each set. The types used conform to the standard laid down by the British Association Committee.

Analytical Geometry of the Straight Line and Circle.

By JOHN MILNE, M.A., Senior Mathematical Master of the Mackie Academy, Stonehaven. Crown 8vo, 5s.

This book is intended to form an introduction to the study of Analytical Geometry. Simple forms of equations belonging to the straight line and circle are dealt with in the first six chapters, and harder forms are treated later. The examples have been carefully constructed so as to bring into prominence the geometrical properties dealt with.

JUST PUBLISHED.

A First Course in the Calculus.

By W. P. MILNE, M.A., D.Sc., Mathematical Master at Clifton College, Bristol, Examiner in Mathematics, University of St. Andrews, and G. J. B. WESTCOTT, M.A., Head Mathematical Master, Bristol Grammar School, formerly Scholar of Queen's College, Oxford, and University Mathematical Exhibitioner. Crown 8vo, with Answers, 3s. 6d.

Col. Sir Ronald Ross, in his Presidential Address to Science Masters, 1919:—"Few young men know even the aims and objects of the Science of Mathematics, much less its applications, though they may have studied it for years at school. The reason is that the school-boy is not pushed fast enough into the heart of the science, which is the Calculus."

Full particulars of this Series, and of the well-known textbooks of

Arithmetic, Algebra, Geometry, and Trigonometry,

by Messrs. PENDLEBURY, BAKER and BOURNE, BORCHARDT and PERROTT, &c., will gladly be sent on application.

Differential Calculus for Colleges and Secondary Schools.

By CHARLES DAVIDSON, Sc.D., Mathematical Master at King Edward's School, Birmingham. Crown 8vo, with Revision Exercises, Essays, and Problem Papers, 6s.

CONTENTS:—The Differential Coefficient—Differentiation of certain Functions—Successive Differentiation—The Expansion of Functions in Power-Series—The Evolution of Indeterminate Forms—Maxima and Minima—The Tangent and Normal—Curvature—Asymptotes—Singular Points—Curve-Tracing: Rectangular Co-ordinates—Curve-Tracing: Polar Co-ordinates—Envelopes—Evolution—Pedals—Revision Exercises—Essays—Problem Papers—Answers.

Projective Vector Algebra.

An Algebra of Vectors independent of Axioms of Congruence and of Parallels. By L. SILBERSTEIN, Ph.D., Lecturer in Mathematical Physics at the University of Rome. 7s. 6d. net.

This volume is intended to build up an algebra of vectors on the assumptions of projective geometry only, i.e. independent of measurements by rigid transfers. The exposition is simple enough to be easily followed without advanced mathematical training, and the method worked out can be applied to cover the whole field of projective geometry.

and including a section on

"HOW GEOGRAPHY AFFECTS HISTORY."

By Sir H. H. JOHNSTON, G.C.M.G., &c.

"That son of mine . . . twelve years old . . . knows that Lisbon on the Tagus is the capital of Portugal . . . that furry things on the maps are mountains, and he can tell you the export of Burmah. But he doesn't know the least thing about *geography*—real geography. He couldn't tell you by looking at a map whether a bit of road ran uphill or down. He has no idea why London came to stand where it is, and he can't understand why the Huns had only two ways of retreat open to them from France. . . ."

"Well, why should he? We shouldn't if we hadn't been obliged to carry maps all round that silly war."

"BUT THOSE ARE THE THINGS THAT MATTER. . . . Learning names isn't any good. Geography is *the study of the earth's surface*— . . . it ought to be; and that is what I would make it in my school. . . . I would have the boys sent to me for a month every year. When they first came they would just learn physical geography. I would show them mountains, capes, peninsulas, and the rest. Then they would go to maps. . . . How many schoolmasters do you suppose ever dream of helping out their geography lessons with Ordnance maps of their own neighbourhood? And all that would lead up to the effect of physical geography on mankind. I would show them WHY cities were built, WHY nations grew powerful and declined and HOW POLITICAL GEOGRAPHY IS A CONSEQUENCE OF PHYSICAL GEOGRAPHY."—(From an article in the *Daily Chronicle*.)

What the Teacher needs—

(a few items from an Index of many thousand References)

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo. 6d. each.

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By E. MAGEE, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to. 2s.

LE LIVRE BLEU.

A Second Book of French in Coloured Pictures. By E. MAGEE. With sixteen full-page Coloured Pictures and many other Illustrations. 2s. 3d.

A NEW GRAMMAR BOOK.

By AGNES CATNACH, B.A. (Lond.), Assistant Mistress at King Edward's Girls' High School, Birmingham. 2s. 6d. net.

This book seeks to connect more closely the formal study of language with adequate expression of thought, and to attain this end all the work is based on the study of the sentence. It is hoped that to children studying on these lines English Grammar will be a subject of living interest, and that the various facts of grammar will gain that logical connexion which they so often seem to lack.

The matter has been set forth as simply as possible, and in a manner to retain the interest of the pupil.

THE GOLDEN BOOKS OF ENGLISH VERSE.

A Graduated Course for Class Study. Arranged by FRANK JONES, B.A., Senior English Master, King Edward's School, Aston, Birmingham.

In Three Books. Book II, now ready. 2s. net. Books I and III, In preparation.

The chief feature of this series is the teaching apparatus provided at the end of each poem. The objects kept in view in drawing up these aids have been to save the teachers' time, and to provide the pupils with an instrument by which they might test the thoroughness or otherwise of their understanding of the poem studied. Each teacher will no doubt supplement them as necessity arises; and to the pupils who have studied a poem in order to answer the questions asked, the aids will suggest other points for further consideration with the help of the teacher.

THE WARWICK SHAKESPEARE.

General Editor: Prof. C. H. HERFORD, Litt.D., Professor of English Language and Literature in the University of Manchester, Examiner of English in London University. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The "Warwick Shakespeare" holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards, 2s. each net.

THE PLAIN-TEXT POETS.

With Introductions by teachers of experience and position, but no further notes are given. With Frontispiece, neatly bound in cloth covers, limp, 10d. each.

A BOOK OF ENGLISH HISTORY FOR CHILDREN. Part I.

By LILIAS MILROY, Head Mistress of the Leamington High School for Girls, and ELIZABETH M. BROWNE, Formerly Assistant Mistress in the Truro High School for Girls. 2s. 6d. net.

This history book seeks to steer a course between those mere "outlines," which are bound to be lacking in interest for young children, and the books of stories from history, often delightful to the readers, but apt to be rather too bulky for use as textbooks. The aim of the authors has been to select carefully the more important movements and the more picturesque incidents of history, and in connexion with these to give those ample details which children love, and at the same time to preserve a clear chronological sequence.

A RAPID SURVEY OF ENGLISH LITERATURE.

By E. H. BLAKENEY, M.A., Winchester College. 2s. net.

"A wonderfully comprehensive selection of brief characteristic extracts, with notes of the times and peculiarities of the writers, and will be found a very interesting book."—*Guardian*.

ENGLISH PROSE EXTRACTS FOR REPETITION.

Selected and edited by E. H. BLAKENEY, M.A. 9d. net.

"Mr. Blakeney has done very useful work in producing this little book of prose extracts, fine examples of prose for the use of schools. Extracts from writers such as Gibbon, Scott, Matthew Arnold, Shorthouse, Pater, George Meredith, Ruskin, and some quite recent writers are brought together."—*Times*.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. The Plays are edited chiefly from the literary standpoint, although philological notes, where such are required, are given. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. 10d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known Junior School Shakespeare, which omits everything which might be thought undesirable in class reading. Cloth covers, 7d. each.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C. 4.
AND AT GLASGOW AND BOMBAY.

CAMBRIDGE LOCAL EXAMINATIONS.

SPECIAL SUBJECTS, 1920.

Religious Knowledge.

PRELIMINARY.

GOSPEL OF S. LUKE. (Preliminary Edition.) With Introduction, Notes, and Maps. By Rev. J. F. RICHARDS, M.A., and Rev. T. WALKER, M.A. 1s. 6d.

JUNIOR AND SENIOR.

GOSPEL OF S. LUKE. With Introduction, Notes, and Maps. By Rev. T. WALKER, M.A., late Sub-Warden and Lecturer at St. Augustine's College, Canterbury, and Rev. J. F. RICHARDS, M.A. 2s.

ACTS OF THE APOSTLES. Part II, ch. 13-28. By Rev. W. H. FLECKER, D.C.L., M.A., Head Master of Dean Close School, Cheltenham. With Introduction, Text, Notes, and Maps. 2s.

English Literature.

PRELIMINARY.

SCOTT-LAY OF THE LAST MINSTREL. CANTOS I-III. By T. T. JEFFERY, M.A. 1s.

JUNIOR.

SHAKESPEARE—TEMPEST. By A. R. WEEKES, M.A., and FREDERICK ALLEN, M.A. 1s. 9d. (Junior Shakespeare.)

SCOTT-LAY OF THE LAST MINSTREL. By T. T. JEFFERY, M.A. 2s.

TENNYSON—COMING AND PASSING OF ARTHUR. By A. R. WEEKES, M.A. 1s. 9d. [In the press.]

SENIOR.

SHAKESPEARE—HAMLET. By S. E. GOGGIN, M.A. 2s. 3d.

SHAKESPEARE—TEMPEST. By A. R. WEEKES, M.A. 2s. 3d.

MILTON—COMUS. By S. E. GOGGIN, M.A., and A. F. WATT, M.A. 1s. 6d.

MILTON—LYCIDAS. By S. E. GOGGIN, M.A. 1s. 6d.

MILTON—SONNETS. By W. F. MASOM, M.A. Second Edition. 2s.

ENGLISH LITERATURE FROM 1579. By A. J. WYATT, M.A. 2s. 9d.

Latin.

JUNIOR.

CAESAR—GALLIC WAR, BOOK VI. By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Introduction, Text, Notes, and Complete Alphabetical Lexicon. 1s. 9d.

VERGIL—AENEID, BOOK VI. By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Introduction, Text, Notes, and Complete Alphabetical Lexicon. 1s. 9d.

SENIOR.

LIUVY—BOOK V. By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Introduction, Text, and Notes. 3s. Vocabulary, 1s.

TACITUS—AGRICOLA. By GILBERT NORWOOD, M.A., and A. F. WATT, M.A. Introduction, Text, and Notes. 3s. Vocabulary, 1s.

VERGIL—AENEID, BOOK VI. By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Introduction, Text, Notes, and Complete Alphabetical Lexicon. 1s. 9d.

Greek.

JUNIOR.

XENOPHON—ANABASIS, BOOK I. By A. H. ALLCROFT, M.A., and F. L. D. RICHARDSON, B.A. Introduction, Text, and Notes. 1s. 9d. Vocabulary, 1s.

JUNIOR AND SENIOR.

EURIPIDES—MEDEA. By JOHN THOMPSON, M.A., and T. R. MILLS, M.A. Introduction, Text, and Notes. 2s. 6d.

Geography.

JUNIOR.

JUNIOR GEOGRAPHY OF EUROPE. Including outlines of Physical Geography the British Isles, and Europe. By G. C. FRY, M.Sc. 2s. 9d.

GREAT BRITAIN AND IRELAND, WITH OUTLINES OF PHYSICAL GEOGRAPHY. From the *Junior Geography* by G. C. FRY, M.Sc. 2s.

JUNIOR GEOGRAPHY OF ASIA, AFRICA. From the *Junior Geography* by G. C. FRY, M.Sc. Each 1s.

SENIOR.

SENIOR GEOGRAPHY OF EUROPE. Including Principles of Physical Geography, the British Isles, and Europe. By G. C. FRY, M.Sc. 3s. 6d.

SENIOR GEOGRAPHY OF ASIA, AFRICA. By G. C. FRY, M.Sc. Each 1s. 6d.

EDUCATION IN THE PREPARATORY SCHOOL.

By V. SEYMOUR BRYANT.

RECONSTRUCTION is the problem of the immediate future. But all schemes of educational reconstruction will be conceived in vain unless the great social upheaval of the past four or five years be interpreted correctly and kept prominently in view. Power is passing from the old governing and aristocratic classes to the producing class, from the authoritative section of the community to the creative; and, whatever be the future relations between Capital and Labour, the executive power will rest eventually with one or other of the creative classes of the nation.

Synchronizing with this transition of power is a revival of the public interest in education and a fuller realization of its vital importance in connexion with individual and national development. Education must become creative; the absorption of knowledge must give place to the development of latent faculties so that evolution may proceed along the lines of the literal interpretation of the very word "education." The school systems of the day are based on the fallacy that education means imparting knowledge, and consequently an altogether excessive proportion of the curriculum is devoted to instilling facts. Knowledge should, however, be acquired, not instilled; it should be, so to speak, a by-product obtained whenever possible indirectly through action and co-operation.

The main impediments to reform in the public schools are the strongly entrenched classical system with which are bound up tradition and vested interests, the tyranny of examinations, and the conditions of entrance imposed by the ancient Universities. These obstacles are fortunately far less formidable in the preparatory schools, whose curricula are influenced by the Common Entrance Examination and the Scholarship Examinations to public schools. Reform is much easier of

accomplishment, therefore, in the preparatory than in the public schools, provided that the head master can break the fetters imposed on him by the public schools.

Theories of education, apparently so varied, are separable into two distinct classes, which have been called the "Effort Theory" and the "Interest Theory" respectively. The former may be summed up in the familiar phrase, "It doesn't much matter what you teach a boy provided he doesn't like it"—the argument being that in after life the pupil will have to face difficulties constantly and be confronted with problems requiring solution which, it may be, are naturally distasteful to him. The false assumption is made here that because a boy is trained to overcome difficulties in a particular subject—scientific, literary, or linguistic—he is better fitted thereby to overcome an entirely different type of difficulty in the wider world into which he will emerge eventually. It is a commonplace of psychology that this is not so, and this fundamental error is the basis of the present obstructive system, which directly encourages stupidity, deceitfulness, and indolence.

Opposed to the "Effort Theory," which practically controls education to-day, we have the "Interest Theory," which may be expressed in the words, "Teach the child just what he likes or can easily be induced to like." Under this heading may be classed various well known systems, which it would be invidious to mention by name, and the thousand and one schemes of faddists in certain private schools of the country. Such systems have had a greater vogue in the United States than in this country. They have there proved a failure, and the result has been that, during the last decade, there has been a replacement of a system of more or less uncontrolled options by a more formal training. The failure was due to non-recognition of the fact that true education demands effort, the exertion of which, in fact, must be one of its principal aims.

The solution of the problem will be found in a perfect welding of the two ideas, both of which taken separately are useless and incomplete. Interest must precede effort; not an external interest based on false motives, such as fear of punishment or ambition to get a prize, but an intrinsic interest in the subject itself. Once such interest is aroused, effort will follow as surely as night follows day. We may now inquire in what directions is such a solution capable of application.

When Latin was the only medium for the communication of thought and knowledge, a thorough acquaintance with the language was essential. The services of the Church and the administration of the law required it, while medical, scientific, and philosophical treatises were either written or spoken in the Latin tongue. The English language has for many years been used for these various purposes, and the need for meticulous precision in grammar and translation has passed away. But the ancient educational methods still persist, and, if the "effort theory" is false, such methods are almost criminal. Such deadening work should be eliminated and be replaced by a study of the literature, mythology, history, and even the philosophy of the ancient Greeks and Romans; all would be fascinating to many boys and would serve to inculcate more of the spirit of the ancients than many years' study according to present methods will ever do.

The same strange inversion of procedure is adopted too often in the teaching of modern languages. Grammar, which is essentially analytical, is taught to the wretched youth before he has any knowledge of the language, or even a vocabulary, the perfectly natural result being that not one boy in ten at the conclusion of his school career can speak the language sufficiently fluently to get along when travelling on the continent. No child learns its native tongue through a study of its grammar, and it is incomprehensible why this natural method should not be applied to all languages instead of the artificial method which is still persisted in, despite its proved failure. In modern languages, as elsewhere, interest must precede and accompany effort.

There are few greater authorities on the teaching of classics to boys than Dr. Rouse, of the Perse School, who has said: "Boys are not spoilt by learning Greek and Latin, but because they learn Greek and Latin too soon and too long, and because they are taught in a dull and stupid way out of books

which mean nothing to their minds. . . . Foreign languages must be learnt one at a time, with a two years' interval between each." The only language which should be attempted before the age of eleven and a half or twelve is French, treated as above suggested. The study of Latin might then begin.

The introduction to history should be strictly biographical, and the knowledge, thus acquired, later linked together into a comprehensive whole. The intrinsic interest in geography may first be elicited by tales of exploration, the imagination stimulated by descriptions of fictitious journeys, and knowledge through action acquired scientifically by means of demonstrations and individual experiments in the laboratories. An elementary study of plants and animals should be interwoven skilfully with this branch of study.

The foregoing subjects, with the addition of English, which requires development along similar lines, constitute what may be called the informative subjects of the curriculum. These should not occupy more than one-half of the school week. Mathematics, which is treated usually as an informative subject, should be frankly practical and utilitarian: much needs to be added and much needs to be eliminated. As a correspondent to the *Times* suggested many years ago, it should consist of "arithmetic capable of application in ordinary life, little or no algebra or geometry as commonly understood, but some mechanics and trigonometry not as commonly understood." The teaching of mathematics thus conceived must be correlated closely with practical work in the laboratory and the workshops. The laboratories and workshops are not to be used with a view of turning out expert men of science and engineers, but as vehicles of education, as means for turning dead subjects into live ones, and as opportunities for the development of latent capabilities.

In the great majority of preparatory schools no study of natural phenomena is attempted, though in some few cases Nature-study finds a niche. Even in such schools, it is restricted generally to the collection of butterflies and moths and the cultivation of school gardens. The study of Nature in its widest aspects must form a really important part of the school work, and should include very elementary astronomy, movements of the celestial bodies, shadows, eclipses, the seasons, cause of night and day, &c.—all taught by direct observation and by simple models made by the boys themselves in the workshops; tides, differences between fresh and mineral waters, leading up to ideas on buoyancy and density; trees, flowers, and fruits; study of growth and the effect of external conditions on life and health; bird life and habits; insects; marine life; causes of simple natural phenomena such as clouds, thunder, lightning, mists, rain, dew, hail, snow, &c.; and the very elementary chemistry and physics arising out of a study of air and water.

Music and drawing also should form integral parts of the curriculum, and not be side-tracked as extras. Considerations of space prevent a more detailed consideration of their claims.

Some indication has been given of the possibilities in a reformed method of treating various subjects, but it must be remembered in connexion with them all that a boy of preparatory-school age is an essentially *curious* animal. Such curiosity must not be suppressed by the cold hand of discouragement, which is often merely a subterfuge to conceal ignorance; but it must be stimulated. To satisfy such curiosity is a step in the right direction, but it is far better to afford such hints as may indicate how the earnest inquirer may satisfy his own curiosity for himself. This involves the exercise of the most valuable processes of co-operative work and research. These processes are applicable to all subjects, but necessitate the existence of a good reference library, laboratories, workshops, gardens, and the availability of masters with a wide range of experience and knowledge.

Such a scheme of education as here outlined is so plausible that it is worth while to pause and examine the difficulties in the way of its adoption. First, we have the question of expense: this, it must be admitted, can only be met by increased fees. In the future, staff salaries will quite justly be on a higher scale, and when to this the additional expense incurred by the necessary accessories is added, it will be seen

readily that the reformed preparatory school can never be a cheap institution.

The difficulty of finding time for the curriculum outlined can be overcome in great measure by treating education as an intellectual whole rather than as a matter of watertight compartments. Much of the instruction, for example, could well be given in French, with a corresponding economy of time. Mathematics, handicraft, science, and drawing lend themselves to a similar blending, and the teaching of English can be correlated readily with instruction in many subjects. A capable organizer will be able, by judicious dovetailing, to get far more out of the weekly programme than is the case at present. Under these new methods, too, boys will put in longer hours with less fatigue than under the old.

Thirdly, we have the objection that, in order that boys may enter the public schools, they must pass the Common Entrance Examination, and consequently must be prepared in accordance with the requirements of that syllabus. This point of view is really not worthy of serious consideration, for boys who have learnt by live methods will have sufficiently active brains to enable them to take this very elementary examination in their stride, although they may not have crammed all the requirements of the examiners in some directions and may have gone far outside them in others.

Finally, there is the argument that boys so trained would not have any chance of obtaining the valuable scholarships to the leading public schools, scholarships which involve a knowledge of Latin and Greek beyond that required even by Oxford and Cambridge Universities in their entrance examinations for boys of eighteen or nineteen. This must be admitted. A preparatory-school head master, running on these reformed lines, must be content to forgo the *kudos* and advertisement of a classical scholarship to Eton or Winchester, but he will have the satisfaction of knowing that in abolishing the process of "hot-housing" the few, he thereby avoids the sacrifice of the many.

INTERMEDIATE EDUCATION IN IRELAND.*

By J. THOMPSON.

THE reform of intermediate education in Ireland is long overdue. While in England and Scotland secondary education has proceeded on a definite plan, and Acts of Parliament were last year passed without difficulty, opening up in those countries great possibilities of development, in Ireland the Government, under pressure, have tinkered with the problem without achieving any solution or making real progress, unless it be progress to have reached a condition of confusion necessitating a clean slate and a fresh start. The Government, it may be admitted, are not altogether to blame. To tell the truth, there has been no driving-force of public opinion in favour of bringing education up to the level of modern requirements. There are dangerous lions in the path, political and religious, and a Chief Secretary, who has many other things to do, may be excused, if not forgiven, for declining to face them. But the time has come when difficulties must be met, unless secondary education in Ireland is to fall hopelessly behind that of other countries.

The recent report of the Vice-Regal Committee is an illuminating document, and ruthlessly reveals the urgency of reform. School grants are paid to schools—not different schools, but the same school—on six different and contradictory systems; schools are under regulations drawn up by three different Government Authorities—the Intermediate Board, the Department of Technical Instruction, and the Castle.

* Report of the Vice-Regal Committee on the Conditions of Service and Remuneration of Teachers in Intermediate Schools, and on the Distribution of Grants from Public Funds for Intermediate Education in Ireland. Price 6d.

Two sets of inspectors supervise the teaching, sometimes overlapping. Teachers have no security of tenure nor certainty of salary, except that it will be low, for no school knows at the beginning of the educational year what its income will be. While prices have risen 100 per cent., while civil servants, miners, railway employés, farm labourers, even primary teachers, have received bonuses or war increases, intermediate teachers have received nothing. What was a scanty wage before the War is now a mere pittance. And yet is not education, especially secondary education, one of the main pillars of the modern state?

The present intermediate system in Ireland originated in 1878, when the Board of Intermediate Education were established to administer the interest on £1,000,000 of the Irish Church Disestablishment Funds. This sum, now producing £27,500 a year, was, and is, after the payment of administration, distributed on the then generally accepted principle of "payment by results" of written examination. It was increased in 1891 by the addition of the surplus of the Local Taxation Account Funds, a sum which varied from £39,000 in 1891 to £71,000 in 1900, and dropped to £16,000 in 1910. Since then it has been fixed at £46,566. This has been paid to the schools on the same results basis. But new educational ideas began to make themselves felt about the beginning of the century. In 1899 the then Intermediate Board were constituted into a Vice-Regal Commission, which, however, took a very narrow view of their function. They considered their main object was to discover a better way of dividing among the schools the limited sum at their disposal. They had, in fact, made up their mind that a system of inspection should be introduced, and reported to that effect. They did not know, or forgot, that the teacher is the mainspring of education, and calmly waved aside the question of the qualification of teachers as outside their scope. Nor did inspection come into operation until after the lapse of several years—in 1909, and was naturally hampered by the existence of an ill-paid teaching body. How could inspection recommend sweeping improvements to half-starved schools?

About the time of the Commission a new Department was established in Ireland for Agriculture and Technical Instruction, and took over the sadly needed task of reorganizing the teaching of Science and Drawing on a modern basis. They did their share of the work of reform well—many people thought too well, for while science teaching progressed with new laboratories, inspection, and new grants on easy methods of payment on attendance plus inspection, with summer courses for teachers, and modern ideas, the teaching of other subjects, which only received payment on the old difficult method of examination, had not the same incentives to progress, and in some cases suffered grievously from the new intruders on the old time-table. But about this time the Government were becoming uneasily aware that inspection by itself was not the "Open Sesame" to a new educational world in Irish education. They began to make inquiries of their own. They brought over Messrs. Dale and Stephens from England in 1904. They wrote a sweeping report, which was pigeon-holed. Why? For their recommendations would have been an excellent foundation for reform. Echo may reply. They pointed out, what teachers have never forgotten, and never will forget, that in the year 1903 the average annual salary paid to assistant masters in seventy Intermediate Schools was £82, and to assistant mistresses in forty-seven schools £48. At length, in 1914, Mr. Birrell did two things. He obtained a new Treasury Grant of £40,000 to improve teachers' salaries, and he introduced a Bill for the Registration of Intermediate Teachers. There was nothing very heroic about this. £40,000 did not go very far, and it was accompanied by statements so contradictory that no one has ever made out whether or not Mr. Birrell intended the whole of it to go to lay assistant teachers; moreover, the £140 per annum which he prescribed as the qualifying salary for a male teacher was no great inducement to teachers to register. Yet Mr. Birrell deserves great credit, for he recognized the need of a minimum wage for qualified teachers, and he provided in registration for a definition of qualification. Since then the question of the

position of teachers has moved forward. Mr. Duke advanced the minimum to £160, and obtained from the Treasury a new grant of £50,000 as the equivalent of Mr. Fisher's increased grant to secondary education in England.

Such is the state of educational affairs at the present time. With the advent of so called reconstruction the reform of this state should be the Government's first care. Perhaps the right solution of Irish difficulties is sound reconstruction all round and fifty years' patience. But for educational reform there is need of sympathy, imagination, knowledge, and courage. Teachers require sympathy. Based upon knowledge, imagination can take a broad outlook. Courage is in any case wanted to insist on the requisite changes. There are two things which are essential in reform. First, religious difficulties must not and need not be raised. Secondly, more money is required. Ireland, it is said, receives already more than her proper proportion of Treasury grants for education. Assuming this, it is the business of the Government to allocate its fair share, which it does not at present obtain, to intermediate education. But Treasury grants in England pay only one half of the total cost of education. Is the Government prepared to impose upon Ireland a local or national rate for education to make up the necessary balance? If not, is Irish education still to be starved for want of money? If, however, the money is not forthcoming, all other changes will be but as a drop in the bucket. To attempt without increased funds to put into operation the recommendations of the Committee will result in disappointment; with the increase, these recommendations would open up a new era in Irish education. For without money no teaching profession can be built up, and without a teaching profession there is no future for intermediate education in Ireland, any more than in other countries.

The Committee's recommendations are for Irish teachers a new charter, offering to properly qualified and registered teachers a fair salary scale, reasonable security of tenure, pensions, and freedom in their work. Without these, the labouring of the Committee will end in the proverbial mouse, but with them the other reforms become extremely important. They may be briefly summarized thus: the unification of primary, intermediate, and technical education under an Irish Minister of Education, and the consequent co-ordination of these three branches of instruction; the simplification of the present system of grants by abolishing payment by results, and substituting payment by capitation, with a due place for inspection and examination; the introduction of an intermediate and of a leaving certificate examination on a broad and liberal syllabus; the due safeguarding of small schools; and the erection of a proper educational ladder. In a word, the Committee have reported in favour of a true teaching profession and increased freedom for the schools.

CORRESPONDENCE.

THE EDUCATION OF THE IMAGINATION.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—May I direct the attention of your readers to a pioneer movement for the education of imagination which has been initiated at Howell's School, Denbigh? The musical teaching throughout the school has attained a very high level, as the exploits of the school orchestra show; but its distinctive feature is a something beyond mere excellence of execution—a kind of mystical tone which underlies both teaching and learning.

This quality was put to the test during the term just concluded, by means of a competition, in which the five pieces selected for competitive execution in the different grades, were offered also to every pupil for "translation" into prose or verse or into pictorial form. In the interests of psychology and of the education of the imagination, the results obtained will merit careful analysis and scientific tabulation; but a summary appreciation by an ear- and eye-witness may not be out of place. The musical themes, beginning with that set for execution (piano and violin) by the most junior group were as follows:—

Grade V: Waltz, by Earnshaw.
Grade IV: Siciliano, by Schumann.
Grade III: Pierrot, by Beringer.
Grade II: Scherzo, by Beethoven.
Grade I: Fantasia, by Mendelssohn.

Perhaps the first thing to note is the comparative popularity of the five pieces selected for interpretation into literary or pictorial form. The Schumann produced scarcely any results at all; the two most popular themes (*i.e.* those that evoked most numerous contributions, literary and pictorial) were those of Earnshaw and Mendelssohn—the simplest and the most difficult. The best literary results, whether in prose or in verse, were stimulated by Earnshaw, Mendelssohn, and Beringer (in that order), and the best pictorial results by Mendelssohn, Beringer, and Beethoven.

The next point, and one that speaks well for the school where the experiment was made, is the distribution of results through every Form. There was only one Form that did not contribute a prize winner; there was not one that did not show up some work of real merit. The work of the Sixth Form was extremely good, while the Second (lowest) Form furnished results above the average. But the most prolific groups lay between these two; and herein lies, it may be, the most important lesson for psychology and for education.

The old-fashioned curriculum, embodying a rigid and exclusive tradition of classics and mathematics, failed, as we are all now aware, to tap the energies and capacities of pupils whose mental build did not conform to the procrustean system then known as "education." There was a constant tendency to tilt up, say, in the Fourth or Lower Fifth, lusty material which the conventional current of instruction could carry no further: and only gradually did those concerned begin to realize that out of this scholastic "rubbish heap" precious treasures were apt to emerge, slowly but surely, in after life.

Hence came the great man of science and inventor—labelled a dunce in his happy school days—the gifted musician, the talented artist; the soul which, though it could not express itself in the ways then considered essential, was longing to find itself in a more intimate and intuitive communion with Nature, or itching to let out pent up vitality at its "fingers' ends" by nimble and imaginative craftsmanship.

The experiment to which we have been referring seems to corroborate the conclusion of all recent educational experience, namely, that in those whilom backwaters of school life—in the Forms which in earlier Victorian days were regarded as "hopeless," and later received a grudging homage as supplying, at any rate, a large percentage of muscle and athletic prowess—there are apt to lurk varied gifts, comparatively unresponsive to the conventional tests of classics and mathematics, but only waiting for the appropriate stimuli to reveal themselves and "come to their own." For the experiment at Denbigh, so far as its results can be relied on, seems to have drawn out the products of imagination (particularly on the pictorial side) most prolifically from the group in question, while next in order come their neighbours, the budding scholars and mathematicians—minds normally supple and alert, but not yet scholastically mature. LONSDALE RAGG.

A HOLIDAY COURSE IN SPAIN.

To the Editors of The Journal of Education and School World.

SIRs,—Will you allow me to make known to your readers who may be studying, or wish to study, Spanish that the University of Toulouse is about to recommence its Holiday Courses, and that the course this year will be held at Burgos, beginning on August 1. No better place could have been chosen. Burgos enjoys an excellent summer climate; the city itself has much intrinsic interest, and the environs, to which excursions will be organized, are particularly attractive. To those who know the enthusiasm and organizing ability of the Director, Prof. MÉRIMÉE, as well as his European reputation as a Spanish scholar, it will be needless to say more.

I should be very glad, after the end of this month, to give further information to any who would write to me at 24 Beaufort Road, Kingston-on-Thames. I may add that I have no personal motives for calling attention to the course, but, being at present engaged in Madrid in investigating facilities for advancing the study of Spanish in England through interrelation, have had the advantage of learning much about it from Prof. MÉRIMÉE, and of examining the important work which he is directing here in connexion with the Institut Français.—I am, Sirs, &c.,

E. ALLISON PEERS,

Hon. Sec. Modern Language Research Association.

Calle Rafael Calvo 1, Madrid.

April 7, 1919.

THE SECONDARY, TECHNICAL, AND UNIVERSITY TEACHERS' INSURANCE SOCIETY.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—May we ask the favour of space in your columns to inform those of your readers who are under the regulations of the National Health Insurance Act that, now the new Superannuation Act has come into force, they can retain their membership in their approved societies by becoming voluntary contributors. Even those members who are in receipt of a salary exceeding £160 per annum can, if qualified by two years' membership, remain eligible for sickness or disablement benefits by payment of reduced weekly contributions. We would strongly urge your readers to write to their societies for full details.

It will be of interest to many insured persons to know that the valuation of societies will be shortly undertaken by the Commissioners, and the Secondary, Technical, and University Teachers' Insurance Society then expects to be in a position to offer additional benefits. Wishing to help its members as much as possible, the S.T.U.T.I.S. has a limited number of letters for the benefits of the Royal Surgical Aid Society, whereby members, under certain regulations, may obtain surgical appliances free, or at reduced charges.

—Yours faithfully,

J. D. McCURE, Chairman.

HENRIETTA BUSK, Vice-Chairman.

UNIVERSITIES AND SCHOOLS.

UNIVERSITY NOTES.

A movement is on foot for the formation of a new University for the South-west of England. The present idea appears to be the establishment of the nucleus of such a University by the combination of a first-rate centre for technical studies at Plymouth with the college at Exeter. The need has been felt for years, but the movement is now receiving a powerful backing and is more assured of success. There is little doubt but that the increasing demand for University education will not merely justify the establishment of these local Universities, but make them an absolute necessity. As the connexion between the secondary education of the districts in which they will be formed and the work done by the University colleges and institutions will be close, it follows that their influence on secondary schools will be anxiously watched. Since the schools and the colleges will be to a large extent interdependent, there should be a continuity of secondary and University education which has been impossible in the past between the older Universities and the more numerous and widely scattered schools from which they, in the main, drew their pupils.

The University of Bristol have decided to include a certain amount of business training in the syllabus for the B.Sc. degree. The action of the University is to be welcomed, for it thus falls into line with the many secondary schools which provide elementary instruction in economics, and its action will encourage other schools also to modify their curriculum in that direction.

The Oxford and Cambridge Schools Examination Board have announced several changes in their regulations. It will not be necessary at present for candidates to offer both Mathematics and Science in Group III, and, further, it should be noted that the schedules themselves in these subjects are under revision. An increased charge will be made to schools which require papers specially set for them.

The University of Leeds have appointed the following representatives on Education Authorities:—East Riding Education Committee, Prof. Crowther and the Hon. E. F. L. Wood; North Riding, Prof. Moorman; the Governing Body of the Drax School, the Rev. W. Seed; Giggleswick Grammar School, Prof. Grant; Harrogate Secondary School, Miss Robertson; Pontefract Girls' High School, Miss Irons; Settle Girls' High School, Miss Cooke.

The Convocation of the University of Manchester are appealing to their graduates who have not already registered as Parliamentary voters to do so without delay. The fee is five shillings, and the Registrar is Dr. Norman Smith, The University, Manchester. In the case of this, as of all other Universities, the number of graduates who have taken advantage of the privileges conferred upon them by the Representation of the People Act is disappointingly small. Teachers, who form a large proportion of these graduates, should register and so be in a position to secure the election of members who can claim to have a real knowledge of the many educational problems which are now awaiting solution.

One result of the War has been an increase in the number of modern languages taught throughout the country. The difficulty, however, is to find a sufficient number of teachers competent to give the required instruction. Recognizing this, the authorities of London University have instituted special examinations in Italian, Russian, and Spanish. They are intended for teachers who desire to obtain certificates to prove their knowledge of the languages they propose to teach, and will be held towards the close of the approaching summer term.

WALES.

An important meeting of the University Court was held at Newport on April 3, when Lord Kenyon, the Senior Deputy-Chancellor, presided. The chief purpose of the Court was to discuss the statement which had been prepared for the Prime Minister, setting forth the scheme of reorganization of the University on the lines laid down by the Report of the Royal Commission. The scheme follows in the main the recommendations of the Commission, and where it differs it is only in comparatively minor details, which do not affect the main principle. In two points, however, the scheme traverses the proposals of the Royal Commission—namely, the organization and control of the School of Medicine and the position of the Secretary of the University Council. The Court also approved of an increase of the number of members of the Court from 213 to 230, due mainly to the larger representation assigned to the County Councils. In this way the Councils have secured an absolute majority on the Court, apart from co-opted members, this being the condition on which they were prepared to give increased financial aid to the University. The Court reiterated its opinion that the School of Medicine should continue to preserve its organic connexion with the Cardiff University College, and this view has been supported with great unanimity by academic and representative opinion in Wales. As regards the Secretaryship of the University Council, there is a divergence of opinion between the Standing Executive Committee and the Local Education Authorities; the former recommend that the officer should be responsible to the Registrar, whereas the latter believe that he should be an independent official, in view of the increased financial work with which he will have to cope, and after a discussion the Court supported the proposals of the Local Authorities and the Royal Commission.

The question of facilities for agricultural education loomed very large in the discussion, as there was a diversity of opinion as to the wisdom of a recommendation of the Executive Committee that only one post-graduate department should be established. Mr. J. H. Davies, the Registrar of the University College, Aberystwyth, was in favour of the proposal, and urged the Court to adopt it without delay, but this was opposed chiefly by the friends of Bangor College, where the other department in agriculture is located, and as the Court seemed to be fairly evenly divided in opinion, it was ultimately agreed, on the motion of Principal Trow, to postpone the discussion. At the Court the problem seemed to be very imperfectly understood, and therefore, rather than commit an error which would be difficult to rectify later, it was undoubtedly wiser to defer the further consideration of the matter.

The financial aspect of the scheme created a good deal of discussion. Sir Isambard Owen pointed out that, as the estimates were drawn up in 1916, they were in many respects out of date and that the suggested scale of salaries for professors and lecturers was inadequate, and compared unfavourably with the salaries paid in English University colleges. The three colleges had drawn up provisional estimates of their requirements, though they were careful to say that they should be regarded simply as an indication of their needs in the future, and should not be interpreted as the full extent to which they would call upon the reconstituted University for funds. The estimates were: For Aberystwyth, £33,775; Bangor, £27,063; Cardiff, £31,495; and for Swansea, £26,725. The whole question was further considered by a Special Committee, and it is now calculated that a grant approximating to £150,000, rather than to the original estimate of £100,000, will be needed in order to place the University on a sound basis. The above estimate does not include the sum of £6,300 required for the Board of Celtic Studies, nor for the proposed Agricultural Research Department.

Mr. Tom John was appointed Treasurer, in succession to the late Sir J. Hills-Johnes, V.C.

A well attended meeting of the Association of Head Masters and Head Mistresses of Welsh Secondary Schools was held at Shrewsbury on March 28, under the presidency of Mr. A. Lyon (Hawarden School). There were papers of general

Welsh County
Schools
Association.

educational interest read, bearing chiefly on the new situation created by the Education Act in Wales. Mr. Rhys Morgan (Pontypridd) dealt with the problem of the middle schools in Glamorgan, pointing out the difficulties and the dangers which their establishment would in all probability create, though the Association recognized the complexity of the problem which this Authority has to face in view of the large number of children in the county between the ages of twelve and sixteen. Other matters discussed were salaries and pensions, and in relation to the former, it was resolved that a strong effort should be made to induce Local Authorities to put into force without delay the scales recommended by the Departmental Committee. Throughout the Principality the present scales are grossly inadequate, and in only one or two of the larger areas, such as Swansea and Cardiff, has there been any serious attempt to place the assistant masters and mistresses on a satisfactory financial scale. We understand that the views of the Association are likely to bear fruit in several counties. The Association has always been very chary of expressing any opinion on the question of the salaries of its own members, but it was felt that it would be impolitic not to do so now, when we are on the eve of a change in our educational system; and it was agreed that no Head should be paid less than £600, which is not an extravagant amount when compared with that paid to the assistant staff, and taking into account the present value of money. Part of one session was devoted to a discussion of the schedule and syllabuses of the Central Welsh Board Examination. These have been recast and sifted so often that we may hope that at last something like finality has been reached, for, after all, they are simply the instruments of education.

General regret was expressed that Dr. Walford Davies, the Musical Director for Wales, was unable through illness to attend to deliver an address.

The experts who were appointed to report to the Privy Council

Swansea Technical College.

on the status of this College have submitted their report. It contains interesting recommendations as to the steps which the College should take in order that recognition as a Constituent College should be accorded to it. The requirements laid down as to buildings and staff are drastic and will entail the outlay of much money, but the local enthusiasm for the scheme is so marked that no doubt they will be met before long. The proposal that the local Training College should be converted into the Arts Section is favourably received by Sir Gregory Foster and Mr. P. E. Matheson, but they are of opinion that the first suggestions as to the provision of teaching in literary subjects are not adequate, and in their opinion a full course should be instituted. The University Court, before which the report was considered, were not satisfied with the recommendation of the above Commissioners on the study of Celtic, and it resolved, on the motion of Prof. Lloyd (Bangor), that in the new college there should be adequate provision for teaching the Welsh language, literature, and history. As Swansea is predominantly Welsh, the wisdom of this is apparent. With this reservation, the Court sent on the report to the Privy Council, with an expression of opinion that the Council should give the petition favourable consideration, and there is no doubt that this will be granted.

The Senate of the University have been considering the Board

Advanced Courses.

of Education's scheme of advanced courses, and have passed a series of resolutions expressing disapproval of them. They follow the usual lines of criticism—the bad effect upon *esprit de corps* in schools not recognized, the difficulty of securing the advantages of an advanced course in the smaller rural schools, the predominance of science and mathematics, and the consequent “disastrous effect of this upon linguistic and literary studies, not only in the schools but also in the University.” The Senate therefore think “that the raising of secondary education to a higher level depends upon obtaining the services of well qualified and efficient teachers, irrespective of the size of the school, but think that other methods than those suggested by the Board could be devised to make it advantageous to governing bodies to pay adequate salaries to such teachers.” The resolution, however, strikes one as rather futile, because the crux of the position is the finding of “other methods” of paying adequate salaries, and if the Senate had given some guidance on this point instead of indulging in vague generalities the resolution would have been more helpful than in its present form.

A most useful pamphlet, in the familiar red cover, has been issued by the Welsh Department as a guide to Local Authorities in the preparation of schemes under the Education Act. In accordance with a recent practice of the Department, it is published

The Board of Education and Schemes.

in English and Welsh, so that its appeal may be to a wider public. The suggestions are interesting as an indication of the extent of the activities which the schools of the future may be expected to embark upon. In addition to the usual type of school and curriculum, for example, the Board would welcome in the new schemes provision for teaching an enlightened patriotism, and for the inculcation of temperance, because in Wales public opinion is already ripe and the country is prepared for definite proposals. The pamphlet also contains a summary of the scope of the new Act, so that no Authority can plead ignorance of its powers or its duties, and the hope is expressed that the new schemes will be such as to inspire the public and to secure the sympathy and support necessary for carrying out a far-reaching system of educational facilities. The Board have several important recommendations to make as to the position of continuation schools in the educational system of the country, and they emphasize the fact that no strict uniformity in the provision of buildings or curriculum is necessary, and they also express anxiety lest the new schools should in any way injure the excellent intermediate and secondary schools. In fact, no injury is anticipated. In an appendix, full details for the construction of new schemes is given. No official or member of an Education Committee should be without a copy of this essentially practical booklet.

Two prominent head masters of Welsh intermediate schools are resigning their posts at the end of the next term—Mr. W. Glyne Williams, of the Friars' School, Bangor, and Mr. Roger W. Jones, of Pengam School. They have both been presidents of the Welsh County Schools Association.

At the last Court, Alderman Hopkin Morgan, Mr. Frank P. Dodd (Wrexham), and Dr. Vaughan Thomas (Swansea) were elected to represent the University on the National Council of Music.

SCOTLAND.

Sir Douglas Haig is to visit St. Andrews about the middle of May, when he will be installed as Lord Rector of the University.

An anonymous donor has given £10,000 to the University for the endowment of a lectureship in Orthopaedics.

The Edinburgh and Leith Chambers of Commerce, the Merchant Company, the Leith Ship-owners' Society, the Society of Accountants, and the Institute of Bankers have raised £15,000 by subscription for the foundation of a Chair of Accounting and Business Method, and the University Court have drafted an Ordinance for the foundation of the Chair. Draft Ordinances have also been prepared for the foundation of Chairs of Psychiatry, Forestry, and Zoology. The University Court have resolved to institute, in the academic year 1919–20, qualifying courses in Italian, Spanish, and Russian, and has appointed Mr. Sanin Capo to be Lecturer in Spanish for five years from October 1, 1919. Dr. A. E. Sprague has been appointed University Lecturer in Actuarial Science, and Dr. Drever Coombe has been appointed Lecturer in Psychology for five years from October 1. Owing to pressure of work, Prof. Sir Ludovic Grant has resigned the office of Secretary of the University. The University Court have approved a syllabus of courses available for American soldiers and overseas students in the summer term, and also a scheme of courses suitable for demobilized men who intend to settle in the Colonies.

Owing to the urgent need for more buildings, especially for new laboratories, in certain of the science departments, the University are making arrangements to secure a site of 100 acres on the outskirts of the city. The number of students who have entered the University since the beginning of the present academic year is over a thousand more than at the corresponding period of last year, and is now only about 250 short of the pre-war standard. The enrolment includes more than 50 men from Canada and about 160 men of the United States Army.

The Senate have resolved to confer a large number of honorary degrees. Among those who are to receive the degree of D.D. are Sir Robert Falconer, K.C.M.G., President of the University of Toronto; Prof. Ronald G. Macintyre, St. Andrew's College, Sydney; the Rev. A. M. Maclean, B.D., C.M.G., The Abbey, Paisley; the Rev. J. Ross Stevenson, D.D., President of Princeton Theological Seminary; the Rev. Canon B. Hillman Streeter, Queen's College, Oxford; and the Very Rev. John Skinner Wilson, formerly Dean of the Edinburgh Diocese of the Scottish Episcopal Church. Those who are to receive the degree of LL.D. include President Wilson; Sir David Beatty; Sir Douglas Haig; Mr. Cyril E. Ashford, C.B., Royal Naval College, Dartmouth; the Rev. Andrew Cameron, Chancellor of Otago University, New
